

Table of Contents

Introduction	1
Structure	3
Notation	4
II. 2-dimensional Characterization	8
1. The parallelogram equality and derived equalities.	8
2. Norm derivatives characterizations.	16
3. James' isosceles orthogonality (midpoints of chords).	24
4. Birkhoff orthogonality.	33
5. Best approximation characterizations.	40
6. Loewner ellipsoids and parallelogram inequalities.	46
7. Pythagorean type orthogonalities.	57
8. Area calculation arguments and area orthogonalities.	63
9. Moduli of convexity and smoothness	70
10. The rectangular constant and related characterizations.	77
11. Inversions and 4-point embeddings.	88
III. 3-Dimensional Characterizations	98
12. Kakutani's conditions.	98
13. Approximation theoretic derivates of Kakutani's condition.	107
14. Blaschke's condition and derived characterizations.	113
15. Chebyshev radius and centers.	119
16. Combining the Garkavi-Klee condition with the Hahn-Banach theorem.	128
17. Best coapproximation and optimal sets.	134
18. Symmetry of orthogonality.	140
19. Symmetry of orthogonality with smoothness.	149
20. Subspace homogeneity and concluding remarks.	152
IV. Tables and references	158
A. A list of characteristic properties.	158
B. Proof scheme tables.	180
C. References: Alphabetical list.	188
Chronological list.	196
D. Index	197
List of symbols.	200
