Contents

1 Introduction 1
1.1 Transport Phenomena in Porous Media and Modeling 1
1.2 Molecular Dynamics Simulation and Homogenization Analysis 2
1.3 Underground Disposal of HLW's and Bentonite 5

2 Introduction to Continuum Mechanics 9
2.1 Newtonian Mechanics 9
2.2 Deformation Kinematics 11
2.2.1 Motion and Configuration 12
2.2.2 Changes of Frame and Frame Indifference ♣ 16
2.2.3 Motion in a Non-inertial System ♣ 17
2.2.4 Deformation Gradient, Strain and Strain Rate 19
2.2.5 Transport Theorems and Jump Condition 25
2.3 Mass Conservation Law 29
2.4 Law of Conservation of Linear Momentum and Stress 30
2.4.1 Eulerian Descriptions 30
2.4.2 Lagrangian Descriptions ♣ 33
2.5 Conservation of Moment of Linear Momentum and Symmetry of Stress 35
2.6 Incremental Forms of the Equation of Equilibrium ♣ 36
2.6.1 Total Lagrangian Form 36
2.6.2 Updated Lagrangian Form 37
2.7 Specific Description of the Equation of Motion ♣ 38
2.7.1 Eulerian Equation of Motion 38
2.7.2 Lagrangian Equation of Motion 39
2.7.3 Incremental Form of the Total Lagrangian Equation of Motion 39
2.7.4 Incremental Form of the Updated Lagrangian Equation of Motion 39

2.8 Response of Materials: Constitutive Theory 40
2.8.1 Fundamental Principles of Material Response 41
2.8.2 Convected Derivative, Corotational Derivative and Frame Indifference ♣ 42
2.8.3 Invariants of Stress and Strain and Isotropic Elastic Solids 46
2.8.4 Newtonian Fluid 53
2.9 Small Strain Viscoelasticity Theory 56
2.9.1 Boltzmann Integral and Excitation-response Theory 56
2.9.2 Stress Relaxation and the Relaxation Spectra: Generalized Maxwell Model 58
2.9.3 Creep and the Retardation Spectra: Generalized Kelvin-Voigt Model 61
2.9.4 Relaxation and Retardation Spectra and Their Asymptotic Expansion 63
2.9.5 Experiments for Determining Viscous Properties 64
2.10 Small Strain Plasticity: Flow Theory 67
2.10.1 Yield Function and Hardening Law 68
2.10.2 Prager's Consistency Condition 71
2.10.3 Flow Rule and Incremental Constitutive Law 72

3 Non-equilibrium Thermodynamics 77
3.1 Review of Classical Thermodynamics 77
3.1.1 An Application of Classical Thermodynamics for a Newtonian Fluid 78
3.1.2 The Role of the Second Law of Thermodynamics in Classical Theory 79
3.1.3 The Entropy Inequality in Classical Continuum Mechanics 80
3.1.4 Note on the Proposed Framework 81
3.2 Conservation of Energy: The First Law of Thermodynamics 82
3.2.1 Stokes' Power Formulation as Mechanical Conservation of Energy in a Continuum: Eulerian Description 82
3.2.2 Generalized Strain Measure and its Conjugate Stress in a Continuum ♣ 86
3.2.3 Stokes' Power Formula in a Continuum: Lagrangian Description ♣ 87
3.2.4 First Law of Thermodynamics in a Thermo-mechanical Continuum: Conservation of Mechanical and Thermal Energies 88
3.2.5 First Law of Thermodynamics in a Thermo-mechanical Continuum: Eulerian Description 89
3.2.6 First Law of Thermodynamics in a Thermo-mechanical Continuum: Lagrangian Description ♣ 90

3.3 Second Law of Thermodynamics 90
3.3.1 Thermal Energy and the Existence of Entropy: The First Part of the Second Law of Thermodynamics ... 91
3.3.2 Entropy Inequality: Second Part of the Second Law of Thermodynamics 92
3.3.3 Second Law of Thermodynamics in a Thermo-mechanical Continuum: Lagrangian Description ♣ 97
3.4 Thermodynamic Functions 97
3.4.1 Legendre Transformation and Convex Functions 98
3.4.2 Thermodynamic Functions in a Thermo-mechanical Field: Solids with Small Strain 99
3.4.3 Thermodynamic Functions in a Thermo-mechanical Field: A Finitely Strained Solid ♣ 105
3.4.4 Thermodynamic Functions in a Thermo-mechanical Field: A Fluid 108
3.5 Chemical Process and Thermodynamics 111
3.5.1 Thermodynamic Variables in a Thermo-mechanochemical Field 111
3.5.2 Thermodynamic Functions in a Thermo-mechanochemical Field: A Small Strain Solid 113
3.5.3 Thermodynamic Functions in a Thermo-mechanochemical Field: A Finitely Strained Solid ♣ 118
3.5.4 Thermodynamic Functions in a Thermo-mechanochemical Field: A Fluid 121
3.6 Mixture Theory for a Multi-component Solution 122
3.6.1 Mass Conservation Law 124
3.6.2 Conservations of Linear Momentum and Moment of Momentum 128
3.6.3 First Law of Thermodynamics in a Thermo-mechanochemical Continuum: Conservation of Energy 130
3.6.4 Entropy Inequality in a Thermo-mechanochemical Continuum 132
3.7 Thermodynamics Laws and Constitutive Theory ♣ 133
3.7.1 Constitutive Theory of a Solid with Chemical Processes in the Small Strain Field 134
3.8 Summary of the Framework of Non-equilibrium Thermodynamics ♣ 135

4 Virtual Work Equation, Variational Methods and Energy Principles 139
4.1 Variational Method for a One-dimensional Elastic Problem 139
4.1.1 Strong Form 139
4.1.2 Weak Form and the Virtual Work Equation 140
4.1.3 Principle of the Energy Minimization and a Variational Method 141

4.2 Variational Method for a Three-dimensional Elasticity Problem 143
4.2.1 Strong Form 143
4.2.2 Weak Form and the Virtual Work Equation 144
4.2.3 Principle of the Energy Minimization and a Variational Method 145
4.3 The Penalty Method and the Lagrangian Multiplier Method 145
4.4 Convolution Integral and Energy Forms for Parabolic and Hyperbolic PDEs 147
4.4.1 Energy Form of a Parabolic PDE 149
4.4.2 Energy Form of a Hyperbolic PDE 150
4.5 Interpolation, Approximation and Galerkin Method 151

5 Classical Theory of Diffusion and Seepage Problems in Porous Media 157
5.1 Representative Elementary Volume and Averaging 157
5.2 Diffusion and Seepage Problem for a Multi-component Solution in Saturated Porous Media 159
5.2.1 Mass Conservation for the Fluid Phase 160
5.2.2 Mass Conservation in the Solid Phase 163
5.2.3 Seepage Theory for the Incompressible Fluid 166
5.2.4 Seepage Theory for the Compressible Fluid 169
5.3 Navier-Stokes Equation and the Classical Permeability Theory ... 169
5.3.1 Pipe Flow: Hagen-Poiseulle Flow 170
5.3.2 Flow Through an Assembly of Pipes and Its 'Permeability' 172
5.3.3 Flow in a Tank Filled with Solid Particles and Its Permeability 173
5.4 Fick's Law and Evaluation of the Diffusion Coefficient 174
5.5 Adsorption Isotherm and the Distribution Coefficient 177
5.5.1 Langmuir's Equilibrium Adsorption Isotherm 178
5.5.2 Freundlich's Equilibrium Adsorption Isotherm 181
5.5.3 Temkin's Equilibrium Adsorption Isotherm 181
5.5.4 Langmuir's Nonequilibrium Adsorption Isotherm 182
5.5.5 Freundlich's Nonequilibrium Adsorption Isotherm 182
5.6 Transport Equations and Similitude Laws 182

6 Classical Theory of Consolidation for Saturated Porous Media 185
6.1 Mass Conservation Law and Seepage Equation 185
6.2 Conservation of Linear Momentum, Effective Stress and Biot's Consolidation Theory 186
6.3 Finite Strain Theory of Consolidation ♣ 187
6.3.1 Seepage Equation of Consolidation in a Lagrangian Form 188
6.3.2 Lagrangian Equation of Equilibrium 189
6.3.3 Incremental Form of the Equation of Equilibrium 190

6.4 A Weak Form of Biot's Consolidation Equations and Finite Element Analysis 191
6.4.1 Strong Form 191
6.4.2 Weak Form 192
6.4.3 Finite Element Analysis 193
6.5 The Cam Clay Model 196
6.5.1 Normally Consolidated Clay 196
6.5.2 Over-consolidated Clay 197
6.5.3 The Original Cam Clay Model 198
6.5.4 Modified Cam Clay Model 204
6.5.5 Elasto-plastic Constitutive Law 205

7 Introduction to Homogenization Analysis 207
7.1 One-dimensional Problem of an Elastic Bar 207
7.2 Micro/Macro Coordinates 207
7.3 Microscale and Macroscale Problems 208

8 Homogenization Analysis and Permeability of Porous Media 213
8.1 Micro-inhomogeneous Porous Media and Stokes' Equation 214
8.2 Seepage Theory for Two-scale Porous Media 214
8.2.1 Homogenization Analysis and Seepage Problem of Porous Media 215
8.2.2 Analytical Solution for a Microscale Poiseulle Flow 219
8.2.3 Finite Element Analysis for the Mass Conservation Equation in the Micro-domain 220
8.2.4 Numerical Results of Seepage Analysis for Pure Smectitic Clay 223
8.2.5 Three-dimensional Seepage Analysis of Sand 227
8.3 A Permeability Theory for Multiscale Porous Media 230
8.3.1 Multiscale Permeability Theory 231
8.3.2 Seepage Analysis of Bentonite 238

9 Homogenization Analysis of Diffusion in Porous Media 241
9.1 Micro-inhomogeneous Porous Media and Diffusion Problems 241
9.2 Diffusion Theory for Two-scale Porous Media 244
9.2.1 HA for Diffusion Problems in Porous Media 244
9.2.2 Simulation of a Through-diffusion Test 248
9.2.3 HA Diffusion Equation with Higher Order Derivatives 250
9.3 Diffusion Problem for Multiscale Porous Media 253
9.3.1 Multiscale HA for Diffusion Problems in Porous Media 253
9.4 Diffusivity of Compacted Bentonite Considering Micro-structure 257
9.4.1 Experimental Data of Bentonite Diffusivity 257
9.4.2 Microscale Problem of HA for Bentonite 259
9.5 HA and Similitude for the Seepage/Diffusion Problem 264

10 Long-Term Consolidation of Bentonite and a Homogenization Analysis of the Flow Field 267
10.1 Long-term Consolidation Test on Bentonite 268
10.2 MD/HA Seepage Analysis and 1D Consolidation Theory 270
10.2.1 1D Finite Strain Consolidation Theory 271
10.2.2 Weak Form of the 1D Finite Strain Consolidation Equation 274
10.2.3 FEM for 1D Finite Strain Consolidation Equation 274
10.2.4 Relation Between Permeability and Void Ratio for Compacted Bentonite 276
10.2.5 Consolidation Experiment and Inhomogeneous 1D Analysis 279

A Introduction to Vectors 283
A.1 Vectors in $\mathbb{R}^3$ 283
A.2 Inner Product and the Length of Vectors 284
A.3 Coordinate Transformation 285
A.4 Outer Product 287

B Partial Differentiation and Integral Theorems 289
B.1 Calculus of Partial Differentials 289
B.2 Gauss-Green Theorem 291
B.3 Stokes' Theorem and Exact Differentiability 293

C A Summary of Linear Vector Spaces 299
C.1 Algebraic System 299
C.2 A Linear Vector Space $\mathcal{V} = \{X, +, *\}$ 300
C.3 Basis and Dimension 301
C.4 Topological Spaces 302
C.5 Cauchy Sequence and Complete Space 303
C.6 Functionals and Dual Space 303
C.7 Tensor Product and Tensor Space 304
C.8 On Completeness of Function Spaces 306
C.8.1 Sequence Space l^p 306
C.8.2 Completeness of l^p 309
C.8.3 Completeness of C$[a, b]$ Under the Norm $\| x \|_\infty$ 310
C.8.4 Bessel's Inequality and Parseval's Equality 311
C.8.5 Completeness of Fourier Basis $\{\phi_n\}$ 313

D Classical and Chemical Thermodynamics 317
D.1 Energy Conservation Law and Thermodynamic Systems 317
D.2 Existence of Entropy and Thermal Energy: First Part of the Second Law of Thermodynamics 318
D.2.1 Carnot Cycle 319
D.2.2 Entropy as a State Variable 322

D.3 Interpretation of Entropy within the Framework of Statistical Thermodynamics: Boltzmann's Theory ♣ 323
D.3.1 Statistical Representation of Molecular States and Boltzmann Distribution 324
D.3.2 Molecular Partition Function q 325
D.3.3 Internal Energy and Entropy: Boltzmann's Formula 327
D.4 Entropy Production: Second Part of the Second Law of Thermodynamics 331
D.4.1 Second Law of Thermodynamics for the Irreversible Process 331
D.4.2 Entropy Production 332
D.4.3 Second Law of Thermodynamics and the Minimum Energy Principle 336
D.4.4 Second Law of Thermodynamics in a Thermo-mechanical Continuum: Eulerian Description 336

E Chemical Processes and Classical Thermodynamics 339
E.1 Molar Description of Thermodynamic Functions 339
E.2 Heat of Reaction and Change of Enthalpy 342
E.3 Change of Entropy 345
E.3.1 Progress of Chemical Reaction and Change of Entropy 345
E.3.2 Affinity and Direction of Reaction 346
E.3.3 Change of Entropy and the Diffusion Process 348
E.3.4 Changes of Temperature/Pressure/Phase and Entropy 348
E.4 Change of Gibbs Free Energy and Chemical Potential 350
E.5 Thermodynamics of Gas 351
E.6 Diffusion Behavior of Solutions without Inter-molecular Interaction 353
E.6.1 Chemical Potential 353
E.6.2 Diffusion Coefficient in an Ideal Solution: Stokes–Einstein Equation 354
E.6.3 Diffusion Coefficient of Solute without Inter-molecular Interaction 355
E.7 Diffusion Process in an Electrolyte Solution 356
E.7.1 Chemical Potential of Electrolyte Solute 356
E.7.2 Electrostatic Field due to Distributed Ions and Activity Coefficient: Debye–Hückel Theory 358
E.7.3 Diffusion of Ionic Species in an Electrolyte Solution 361
E.7.4 Electric Conduction in an Electrolyte Solution 362
E.8 Chemical Equilibrium and the Equilibrium Constant 364
E.9 Phenomenological Theory of Non-equilibrium Chemical Reaction Processes 366
E.9.1 Reaction Velocity and Order of Reaction 366
E.9.2 Elementary Reaction and Complex Reaction 367

E.9.3 Temperature Dependence of Reaction Rate: Arrhenius Equation 370
E.9.4 Transition State Theory 371
