CONTENTS

E. AXELRAD and F.A. EMMERLING, Intrinsic shell-theory formulation effective for large rotations and an application 1

J. BADUR and W. PIETRASZKIEWICZ, On geometrically non-linear theory of elastic shells derived from pseudo-Cosserat continuum with constrained micro-rotations 19

M. BERNADOU, Some mathematical results related to non-linear thin shell problems 33

J. BIELSKI, Postcritical deformations of meridional cross-section of elastic torodial shells subject to external pressure 47

W.R. BIELSKI and J.J. TELEGA, The complementary energy principle in finite elastostatics as a dual problem 62

H. BUFLER, Finite rotations and complementary extremum principles 82

K.F. CHERNYKH, Deformation of the shell boundary 101

J.CHRÓŚCIELEWSKI and R. SCHMIDT, Comparison of numerical results for nonlinear finite element analysis of beams and shells based on 2-D elasticity theory and on novel finite rotation theories for thin structures 111

R. DE BOER and W. WALTHER, Fundamental equations and extremum principles in the theory of thin shells 121

M. EPSTEIN, Inhomogeneity and rotation 131

Th. HINKELMANN, S. LUMPE and H. ROTHERT, On a general theory of large rotations and small strain with application to three-dimensional beam structures 136

M. IURA, Finite displacement theory of naturally curved and twisted beams with finite rotations 148

L. LIBRESCU and R. SCHMIDT, Higher-order moderate rotation theories for elastic anisotropic plates 158

J. MAKOWSKI and H. STUMPF, Finite strains and rotations in shells 175
