List of abbreviations and symbols	ix
Kurzfassung	xi
Abstract	xiii
Acknowledgments	xv
Dedication	xvii
1 Introduction	1
1.1 HSR in wearable systems	2
1.2 Hand sign languages	2
1.3 Motivation and problem statement	3
1.4 Research objectives	4
1.5 Thesis outline	4
2 Theoretical background on hand sign recognition	7
2.1 Forearm anatomy and skeleton structure	7
2.1.1 Anterior compartment	9
2.1.2 Posterior compartment	10
2.1.3 Neuromuscular control mechanisms	11
2.1.4 Physical changes in performing hand signs	12
2.2 Electrical impedance tomography (EIT)	13
2.2.1 Sensing principle	13
2.2.2 Injection configurations	14
2.2.3 Signal processing for EIT	16
2.3 Force myography (FMG)	20
2.3.1 Sensing principle	20
2.3.2 Pressure sensors types	21
2.4 Electromyography (EMG)	25
2.4.1 Sensing principle	25
2.4.2 Filtering and feature extraction	26
3 State of the art of hand sign recognition systems	29
3.1 Video-based systems	29
3.2 FMG-based systems	30

3.3	EIT-based systems	38
3.4	EMG-based systems	43
3.5	Hybrid recognition methods and data fusion	48
3.6	Proposed methodology	54
4	Design of hand sign recognition measurement systems	57
4.1	EIT measurement system	57
4.1.1	Impact of EIT on biological tissues	58
4.1.2	EIT system design	60
4.1.3	EIT system test and validation	64
4.2	FMG measurement system	65
4.2.1	Sensor characterization and analysis	65
4.2.2	Data acquisition unit for pressure sensor monitoring	67
4.2.3	Arm band and sensor integration	69
4.3	Hybrid measurement system	70
4.3.1	Smart 3D printed FMG-EIT band	70
4.3.2	Integration of EMG sensors	75
4.3.3	Synchronized FMG-EIT-EMG data acquisition	76
5	Investigation of measurements methods	79
5.1	Data collection	79
5.2	Signal pre-processing	81
5.2.1	Feature extration	81
5.2.2	Signal outliers identification and filtering	83
5.3	Sensitivity analysis	86
5.4	Reproducibility evaluation	88
5.4.1	Force myography	89
5.4.2	Electrical impedance tomography	92
5.4.3	Electromyography	93
5.4.4	Reproducibility comparison of EIT-FMG-EMG	95
5.5	Ambiguity analysis	96
5.5.1	Force myography	98
5.5.2	Electromyography	101
5.5.3	Electrical impedance tomography	105
5.6	Offline classification	110
5.7	Linking hand signs ambiguities to anatomy	110
5.8	Elimination of ambiguities in hand sign sets	113
5.9	Comparative study	114
6	Hybrid FMG-EIT method for hand sign recognition	119
6.1	FMG-EIT fusion approach for hand sign recognition	119
6.1.1	Complementary study of EIT and FMG	119
6.1.2	Systematical data fusion methodology	120

6.2 Real-time hand sign segmentation	125
6.2.1 Auto-segmentation method of hand signs	125
6.2.2 Auto-segmentation validation procedure	128
6.3 System-user calibration for online hand sign classification	129
6.3.1 Deep learning model implementation	130
6.3.2 Inter-subjects classification	131
6.3.3 Transfer-learning approach	135
6.3.4 Person-dependent classification	137
6.4 Online hand sign recognition	142
6.4.1 User interface and acquisition process	142
6.4.2 Online classification results and analysis	144
6.5 System validation in real-case scenario	146
7 Conclusion	149
Bibliography	153
