

Contents

Section I: Physical Aspects

Chapter 1	Structure and Electronic Properties of DNA A. VAN DE VORST and E. WESTHOF (With 5 Figures).	3
1.1	Nomenclature and Primary Structure of DNA	3
1.2	Dimensions and Conformations	5
1.2.1	The Bases	7
1.2.2	The Nucleosides and Nucleotides	8
1.2.3	DNA	9
1.3	Electronic Properties	11
1.3.1	Molecular Orbital Calculations	11
1.3.2	Absorption Spectra	13
1.4	Interactions	14
1.4.1	In-Plane Interactions: The Hydrogen Bonds	14
1.4.2	Vertical Associations: The Stacking of the Bases	16
1.4.3	The Role of the Sugar-Phosphate Backbone	17
1.4.4	The Stability of the DNA Helix	18
1.4.5	Interactions with Aromatic Molecules	19
Chapter 2	Interaction of Ionizing Radiation with Matter A. ORE (With 2 Figures)	21
2.1	Introduction	21
2.2	Ionizing Radiation	21
2.3	Degradation Spectra and Linear Energy Transfer (LET)	22
2.4	Primary Processes and Primary Products ..	23
2.5	Activation Spectra	24
2.6	Superexcited States	26
2.7	Inner-Shell Ionizations	26
2.8	Slow Particles	28
2.9	Direct and Indirect Effects. Energy Trans- fer	29
2.10	Radiation Yield. G-Value	30

Chapter 3	Structure of Radicals from Nucleic Acid Constituents J. HÜTTERMANN, J.N. HERAK and E. WESTHOF (With 1 Figure)	31
3.1	Introduction	31
3.2	Base Radicals	32
3.2.1	Hydrogen Addition to Purines	32
3.2.2	Hydrogen Addition to Pyrimidines	36
3.2.2.1	5-yl Radicals	36
3.2.2.2	6-yl Radicals	40
3.2.2.3	>C̣-OH Radicals	42
3.2.3	Hydrogen-Abstraction Radicals	43
3.2.3.1	Abstraction from Pyrimidine Rings	43
3.2.3.2	Abstraction from Substituent Groups to Pyrimidines and Purines	44
3.2.4	Molecular Ion Radicals	45
3.3	Sugar-Phosphate Backbone Radicals	48
3.4	Molecular Orbital Calculations	50
3.5	Radical Formation Mechanisms	55
Chapter 4	Structure of Radicals from Nucleic Acids (With 11 Figures)	59
4.1	Frozen Solution and Dry State J.P. ELLIOTT and S.J. WYARD	59
4.1.1	Radiolysis of DNA in Frozen Solution ..	59
4.1.2	Radicals from Solid Nucleic Acids	65
4.2	Oriented Fibers A. GRÄSLUND, A. RUPPRECHT and A. EHREN- BERG	71
4.2.1	The Wet Spinning Method	72
4.2.2	ESR Results	75
Chapter 5	Radical Yields J.P. ELLIOTT and S.J. WYARD (With 1 Figure)	80
5.1	General Aspects	80
5.2	Yields in Constituents	84
5.2.1	Solid Bases, Nucleosides and Nucleotides	84
5.2.2	Influence of Environmental Parameters .	85
5.2.2.1	Temperature	85
5.2.2.2	Crystallinity	86
5.2.2.3	Glasses	86
5.3	Yields in Nucleic Acids	88
5.3.1	Influence of Environmental Parameters .	88
5.3.1.1	Effect of Moisture Content	88
5.3.1.2	Effect of Molecular Weight	89
5.3.1.3	Yields at Room Temperature	89
5.3.1.4	Effect of Temperature	91
5.3.1.5	Glasses	92
5.3.2	Comparison with Yields in Constituents	94

Chapter 6	Radiomimetic Radical Production (With 9 Figures)	97
6.1	Introduction	97
6.2	Interaction with H-Atoms and OH-Radicals J.N. HERAK	97
6.2.1	Addition and Abstraction Reactions with Nucleic Acid Bases and Sugars	97
6.2.2	Reactions with Nucleic Acids	99
6.3	Reaction with Electrons A. VAN DE VORST	100
6.3.1	ESR Characteristics of the Pyrimidine and Purine Anion Radicals	100
6.3.1.1	Pyrimidine Derivatives	100
6.3.1.2	Purine Derivatives	102
6.3.2	Conversion of the Anion Radicals	102
6.3.2.1	Pyrimidine Base Anions as Precursors of H-Addition Radicals	102
6.3.2.2	Dehalogenation Radicals in 5-Halo- uracils	103
6.3.2.3	Protonation Reactions of Purine Anions	103
6.4	Interaction with Excited Inert Gases K.F. WEIBEZAHN	104
6.4.1	Purine and Pyrimidine Derivatives	105
6.4.2	DNA	107
6.4.3	Mechanisms of Radical Formation	108
Chapter 7	Transfer Phenomena (With 8 Figures)	109
7.1	Introduction	109
7.2	Substituent Effects J. HÜTTERMANN	110
7.2.1	Barbituric Acid and Derivatives	110
7.2.2	5-Halogen-Substituted Uracil Bases and Nucleosides	112
7.3	Electron Transfer in γ -Irradiated DNA S. GREGOLI	118
7.3.1	Preliminary ESR Experiments on γ -Ir- radiated DNA	119
7.3.2	Mechanical Mixtures and Molecular Com- plexes of DNA Nucleotides	119
7.3.3	A Working Hypothesis for Internucleo- tide Spin-Transfer Processes	121
7.3.4	Other Examples of Intermolecular Spin- Transfer Processes	122
7.3.5	Formal Analysis of ESR Spectra of Dry DNA	124
7.4	Photosensitization by Dyes in Frozen Solutions A. VAN DE VORST	125
7.4.1	Nature of the Photosensitizers	125

7.4.2	Free Radicals Induced in Nucleotides ..	126
7.4.2.1	Description and Interpretation of the ESR Spectra	126
7.4.2.2	Mechanism of Radical Formation	128
7.4.2.3	Influence of Oxygen	129
7.4.2.4	Influence of the Relative Molar Concentration of Dye and Substrate	129
7.4.2.5	Influence of Dye Aggregation	130
7.4.3	Free Radicals Induced in DNA	131
7.4.3.1	Description and Interpretation of the ESR Spectra	131
7.4.3.2	Mechanism of Formation: Anionic Stage ..	132
7.4.3.3	Quantitative Influence of Oxygen and Ionic Strength	132
7.4.4	General Conclusions	133

References.....	135

Section II: Chemical Aspects

Chapter 1	Primary Events in the Radiolysis of Aqueous Solutions of Nucleic Acids and Related Substances G. SCHOLLES (With 4 Figures)	153
1.1	Reactive Species in Irradiated Aqueous Systems	153
1.2	Rates of Reaction with the Primary Species	155
1.3	Intermediates in the Radiolysis of Aqueous Solutions of Nucleic Acids and Their Components	157
1.3.1	Reaction with Hydroxyl Radicals	158
1.3.1.1	Pyrimidines	158
1.3.1.2	Purines	161
1.3.1.3	Nucleosides, Nucleotides and Polynucleotides	162
1.3.2	Reaction with Hydrogen Atoms	163
1.3.3	Reaction with the Solvated Electron ...	166
1.3.4	Reactions of the Intermediates with Added Solutes	169
1.3.4.1	Oxygen	169
1.3.4.2	Electron-Transfer Processes	170
Chapter 2	Radiation-Induced Degradation of the Base Component in DNA and Related Substances - Final Products R. TEOULE and J. CADET (With 17 Figures)	171
2.1	Introduction	171
2.2	Nucleic Acid Constituents in Aqueous Aerated Solutions	172
2.2.1	Free Bases	172

2.2.1.1	Thymine	172
2.2.1.2	Uracil	177
2.2.1.3	Cytosine	177
2.2.1.4	5-Bromouracil	180
2.2.1.5	Adenine	180
2.2.2	Nucleosides and Nucleotides	182
2.2.2.1	Thymidine	182
2.2.2.2	5-Bromo-2'-Deoxyuridine	184
2.2.2.3	Uridine	185
2.2.2.4	Deoxyadenosine	186
2.2.2.5	Nucleotides - Thymidylic Acid and Uridylylic Acid	186
2.2.2.6	Dinucleotides - TpT	187
2.3	Nucleic Acid Constituents in Deaerated Aqueous Solutions	187
2.3.1	Free Bases	187
2.3.1.1	Thymine	187
2.3.1.2	Uracil	188
2.3.1.3	Cytosine	188
2.3.1.4	Adenine	190
2.3.2	Free Bases in the Presence of a Second Solute	190
2.3.2.1	Bases and Ethanol	190
2.3.2.2	Thymine and Radiosensitizers	192
2.3.2.3	Pyrimidine Bases and Surfactants	192
2.3.2.4	Pyrimidine Bases and Amino Acids	193
2.3.3	Nucleosides and Nucleotides	193
2.3.3.1	Thymidine	193
2.3.3.2	Purine Nucleosides and Nucleotides	193
2.4	Nucleic Acid Constituents in Solid State or in Frozen Solutions	194
2.5	DNA in Aerated and Deaerated Solutions	194
2.5.1	Modifications of the Base Moieties in the Polynucleotide Chain	194
2.5.1.1	UV Absorption and IR Spectra	194
2.5.1.2	Formic or Perchloric Acid Hydrolysis - Base Destruction	195
2.5.1.3	Peroxidation of Pyrimidines	197
2.5.1.4	Indirect Determinations of the Fairly Stable Products	197
2.5.1.5	Direct Determinations of the Fairly Stable Products	198
2.5.2	Products Released from the Polynucleotide Chain	200
2.5.2.1	^3H - H_2O from DNA Thymine Methyl-(^3H) ...	200
2.5.2.2	Ammonia	201
2.5.2.3	Free Bases.....	201
2.5.2.4	Products of Base Component Degradation - Release of Carbon Dioxide from the Thymine Fragment.....	202

Chapter 3	Radiation-Induced Degradation of the Sugar in Model Compounds and in DNA	
	C. VON SONNTAG and D. SCHULTE-FROHLINDE	204
3.1	Introduction	204
3.2	Free Radical Reactions of Sugars and Sugar Phosphates	204
3.3	Sugars	208
3.3.1	2-Deoxy-D-Ribose	208
3.3.1.1	Aqueous Solutions	208
3.3.1.2	Crystalline State	211
3.3.2	D-Ribose	211
3.3.2.1	Aqueous Solution	211
3.3.2.2	Solid State	212
3.4	Sugar Phosphates	213
3.4.1	D-Ribose-5-Phosphate	213
3.4.1.1	Deoxygenated Solutions	213
3.4.1.2	Oxygenated Solutions	214
3.5	Nucleosides	215
3.5.1	Scission of the N-Glycosidic Linkage in Thymidine	215
3.5.1.1	Deoxygenated Solutions	215
3.5.1.2	Oxygenated Solutions	216
3.6	Nucleotides	216
3.6.1	Phosphate Release	216
3.6.1.1	Mononucleotides	216
3.6.1.2	Thymidine-3',5'-Diphosphate	218
3.6.2	Scission of the N-Glycosidic Linkage ..	219
3.6.3	Formation of Cyclo-Nucleotides	219
3.7	DNA	219
3.7.1	Product Release from DNA and the Mechanism of Strand Breaks	219
3.7.1.1	Release of Malonaldehyde	220
3.7.1.2	Release of Sugars and Unaltered Bases ..	220
3.7.2	End Group Determinations on Broken DNA Strands	224
3.7.2.1	5' End Groups	224
3.7.2.2	3' End Groups	225
Chapter 4	Changes in the Secondary and Tertiary Structures of DNA after Irradiation	
	C.M. WHEELER (With 3 Figures)	227
4.1	Hyperchromicity and Melting Curves	227
4.2	Titration	233
4.3	Other Methods	233
4.4	Conclusions	234
References		236

Section III: Biological Aspects

Chapter 1	Biological Functions of DNA and Methods of Testing W.A. CRAMP, W. KÖHNLEIN and A.R. LEHMANN	255
1.1	Introduction	255
1.2	Processes in which DNA is Involved	255
1.2.1	Semiconservative Replication	256
1.2.2	Transcription	256
1.2.3	Repair	257
1.2.4	Transformation	257
1.2.5	Transfection	257
1.3	Degrees of Difficulty of Testing DNA Functions	257
1.4	Description of Several Simple Systems .	258
1.4.1	Transformation with Bacterial DNA	258
1.4.2	Transfection with Phage DNA	259
1.4.2.1	Transfection of Spheroplasts	259
1.4.2.2	Transfection of Competent Cells	259
Chapter 2	Radiation Effects on the Biological Function of DNA (With 10 Figures)	261
2.1	Introduction T. COQUERELLE and U. HAGEN	261
2.1.1	Main Types of Lesions Induced in DNA by Ionizing Radiation	261
2.1.2	Calculation of the Number of Strand Breaks in DNA	262
2.1.2.1	Analytical Ultracentrifugation	263
2.1.2.2	Preparative Ultracentrifugation	266
2.2	Inactivation of Phage DNA T. COQUERELLE and U. HAGEN	268
2.2.1	The Phage and Its Advantages	268
2.2.2	Irradiation of Nucleic Acids Isolated from Phage	269
2.2.2.1	Biological Inactivation of Single- Stranded DNA	269
2.2.2.2	Biological Inactivation of Double- Stranded DNA	271
2.2.3	Irradiation of Phage	272
2.2.3.1	Inactivation of Phages with Single- Stranded DNA	272
2.2.3.2	Inactivation of Phages with Double- Stranded DNA	273
2.2.4	Effect of Incorporated Radionuclides on the Biological Activity of Phage DNA ..	277
2.3	Irradiation Effects on the Transforming and Transfecting Activity of DNA W. KÖHNLEIN	279
2.3.1	Biological Activity of Transforming DNA Irradiated in vivo	279

2.3.2	Transforming Activity of DNA Irradiated in vitro	280
2.3.3	Contribution of Strand Breakage, Base Damage, and Crosslinks to the Inactiva- tion	281
2.3.4	Mathematical Interpretation of the Dose Effect Curves	283
2.3.5	Biological Activity of Irradiated Trans- fecting DNA	285
2.4	Irradiation Effects on Transcription U. HAGEN	286
2.4.1	Transcription on Irradiated DNA in vitro	286
2.4.2	RNA Synthesis in Irradiated Cells	290
2.5	Irradiation Effects on DNA Replication W. CRAMP	292
2.5.1	Introduction	292
2.5.2	Methods of Measuring DNA Replication in Cells	292
2.5.2.1	Radioactive Labelling	292
2.5.2.2	Autoradiography	293
2.5.2.3	Replication Synthesis Defined	293
2.5.3	Effect of Radiation on Uptake of Pre- cursors into DNA	294
2.5.3.1	Bacteria	294
2.5.3.2	Mammalian Cells in Culture	296
2.5.3.3	Cells of Irradiated Animals	298
2.5.4	Influence of Mitotic Cycle on the Ir- radiation Effects on DNA Synthesis	298
2.5.5	Form and Interpretation of Dose-Effect Curves	300
2.5.6	Inhibition of DNA Synthesis and Cell Survival	300
2.5.7	Irradiation Effects on DNA Synthesis in vitro	302
Chapter 3	Modification of Radiation Damage G. HOTZ	304
3.1	Introduction	304
3.2	Factors Enhancing the Radiosensitivity of DNA	304
3.2.1	Phase State, Dehydration, and Tempera- ture	305
3.2.2	Oxygen	307
3.2.3	Halogenated Base Analogs	308
3.2.4	Chemical Compounds Acting on Radiation Induced DNA Transients	309
3.2.5	Chemical Compounds Combining with DNA Independently of Radiochemical Reac- tions	310
3.3	Sulphydryl Compounds and Radioprotection by Radical Scavenging	311

Chapter 4	Repair Processes for Radiation-Induced DNA Damage	
	A.R. LEHMANN	312
4.1	Introduction	312
4.2	Repair of Single-Strand Breaks in Bac- teria	313
4.2.1	Measurement of Single-Strand Breaks ...	313
4.2.2	Different Rejoining Processes	314
4.2.3	Slow Repair in <i>Escherichia coli</i>	315
4.2.3.1	Genetic Control	315
4.2.3.2	Effects of Post-Irradiation Conditions	317
4.2.4	Fast Repair in <i>E. coli</i>	317
4.2.5	Rejoining of SSBs in Other Bacteria ...	318
4.2.6	Post-Irradiation Degradation	319
4.3	Rejoining of Single-Strand Breaks in Eucaryotic Cells	319
4.3.1	Introduction	319
4.3.2	End Groups Produced	320
4.3.3	Efficiency of Break Production	321
4.3.4	Rejoining after High Doses in Cultured Cells	321
4.3.4.1	Rejoining in Different Cells	321
4.3.4.2	Effects of Inhibitors	321
4.3.4.3	Energy Requirements	322
4.3.5	Studies Using Low Doses (<5 krad) of Ir- radiation	322
4.3.5.1	Rotor Speed Anomalies	322
4.3.5.2	Definition of Complexed DNA	323
4.3.5.3	Properties of Complexed DNA	323
4.3.5.4	The Subunit Hypothesis	324
4.3.6	Rejoining of SSBs in Nondividing Cells	325
4.3.7	Physiological Effects	325
4.3.7.1	Genetic Diseases	325
4.3.7.2	Electrical Activity of Retinas	326
4.3.7.3	Aging	327
4.4	Repair of Double-Strand Breaks	327
4.4.1	Nature and Measurement of DSBs	327
4.4.2	The Production and Repair of DSBs in Bacteria	329
4.4.3	The Production and Repair of DSBs in Eucaryotic Organisms	329
4.5	Repair of Base and Sugar Damage	330
4.5.1	Chemical Demonstrations of Repair	330
4.5.2	Endonuclease Sensitive Sites	331
4.5.3	Repair of Alkali-Labile Lesions	331
4.6	Repair Synthesis in Eucaryotic Cells ..	332
4.7	The Enzymology of DNA Repair	334
4.8	Conclusions	334

Chapter 5	Molecular Aspects of Mutagenesis Due to Ionizing Radiation	
	H. TRAUT	335
5.1	Introduction	335
5.2	Molecular Nature of Gene Mutations Produced by Ionizing Radiation	336
5.2.1	Terminology	336
5.2.2	Studies with Phage	337
5.2.3	Studies with Bacteria	338
5.2.4	Studies with <i>Paramecium</i>	339
5.2.5	Studies with <i>Neurospora</i>	339
5.2.6	Studies with Maize	340
5.2.7	Studies with <i>Drosophila</i>	341
5.2.8	Studies with Mice	342
5.2.9	Strandedness	342
5.2.10	Mutation Frequency and DNA Content of the Genome	344
5.3	Open Questions	344
5.4	Conclusion	345
Chapter 6	Conclusions and Perspectives	
	G. AHNSTRÖM, A. EHRENBORG and A. GRÄSLUND	348
