## Part I. Technique and General Pathology

|                                                                                     |           |
|-------------------------------------------------------------------------------------|-----------|
| <i>1. Clinical and Procedural Aspects . . . . .</i>                                 | <i>1</i>  |
| Clinical Aspects . . . . .                                                          | 1         |
| Procedural Aspects . . . . .                                                        | 1         |
| <i>2. Clinician's Role in Renal Biopsy Management and Processing . . . . .</i>      | <i>5</i>  |
| Biopsy Planning . . . . .                                                           | 5         |
| Tissue Processing by Clinicians . . . . .                                           | 5         |
| <i>3. Renal Biopsy Management and Processing by the Pathologist . . . . .</i>       | <i>8</i>  |
| Light Microscopy Procedures . . . . .                                               | 8         |
| Electron Microscopy Procedures . . . . .                                            | 12        |
| Immunohistologic Procedures . . . . .                                               | 14        |
| Morphometry Technique . . . . .                                                     | 19        |
| Clinically Related Topics . . . . .                                                 | 19        |
| <i>4. Histology of Normal Kidney Tissue . . . . .</i>                               | <i>21</i> |
| Glomerulus . . . . .                                                                | 21        |
| Obsolescent Glomeruli . . . . .                                                     | 28        |
| Glomerular Morphometry . . . . .                                                    | 28        |
| Juxtaglomerular Apparatus . . . . .                                                 | 30        |
| Renal Tubules . . . . .                                                             | 33        |
| Blood Vessels . . . . .                                                             | 39        |
| Interstitial: Connective Tissue, Lymph Vessels and Nerves . . . . .                 | 44        |
| Histological Artifacts . . . . .                                                    | 44        |
| <i>5. Introduction to Renal Histopathology . . . . .</i>                            | <i>46</i> |
| Guidelines for Evaluation of Renal Biopsy . . . . .                                 | 46        |
| Definitions . . . . .                                                               | 48        |
| Typical Renal Lesions Under Low Power Magnification . . . . .                       | 48        |
| <i>6. Histopathology of the Glomerulus Under High Power Magnification . . . . .</i> | <i>54</i> |
| Glomerular Size . . . . .                                                           | 54        |
| Hypercellularity . . . . .                                                          | 54        |
| Changes in Capillary Loop Lumens . . . . .                                          | 56        |
| Capillary Loop Necrosis . . . . .                                                   | 56        |
| Pathological Capillary Loop Contents . . . . .                                      | 58        |
| Changes of the Capillary Loop Wall . . . . .                                        | 62        |
| Changes of Other Glomerular Capillary Wall Constituents . . . . .                   | 77        |
| Changes of the Mesangium . . . . .                                                  | 96        |
| Changes of the Glomerular Capsule . . . . .                                         | 100       |
| Glomerular Obsolescence . . . . .                                                   | 107       |

---

|                                                                                                                         |     |
|-------------------------------------------------------------------------------------------------------------------------|-----|
| 7. <i>Histopathology of the Juxtaglomerular Apparatus (JGA)</i> . . . . .                                               | 116 |
| Limiting Factors Imposed by Biopsy . . . . .                                                                            | 116 |
| Prognostic Value in Renal Hypertension . . . . .                                                                        | 116 |
| Increase in JGA Size . . . . .                                                                                          | 117 |
| Decrease in JGA Size . . . . .                                                                                          | 117 |
| 8. <i>Histopathology of the Renal Tubules</i> . . . . .                                                                 | 118 |
| Problems in Evaluation . . . . .                                                                                        | 118 |
| Histopathology of Complex Tubular Changes . . . . .                                                                     | 118 |
| Cytoplasmic Changes of the Tubular Epithelium . . . . .                                                                 | 125 |
| Nuclear Changes of the Tubular Epithelium . . . . .                                                                     | 129 |
| EM Pathology of the Renal Tubules . . . . .                                                                             | 131 |
| Casts . . . . .                                                                                                         | 134 |
| 9. <i>Histopathology of the Renal Interstitium</i> . . . . .                                                            | 139 |
| Edema . . . . .                                                                                                         | 139 |
| Sclerosis . . . . .                                                                                                     | 139 |
| Fibrosis . . . . .                                                                                                      | 139 |
| Inflammatory Infiltrates . . . . .                                                                                      | 139 |
| Foam Cells . . . . .                                                                                                    | 142 |
| Deposits . . . . .                                                                                                      | 142 |
| 10. <i>Histopathology of the Renal Vessels</i> . . . . .                                                                | 147 |
| Ultrastructural Elements in Vascular Changes . . . . .                                                                  | 147 |
| Specific Vascular Lesions . . . . .                                                                                     | 149 |
| Arteriolar Lesions . . . . .                                                                                            | 152 |
| 11. <i>Immunohistopathologic Parameters</i> . . . . .                                                                   | 155 |
| Definitions . . . . .                                                                                                   | 155 |
| Diagnostic Significance of IF . . . . .                                                                                 | 155 |
| Quantification of IF Findings . . . . .                                                                                 | 156 |
| IF Deposition Character . . . . .                                                                                       | 157 |
| Significance of Immunoglobulins and Other Proteins in Glomerulopathy . . . . .                                          | 160 |
| Additional Glomerular IF Findings . . . . .                                                                             | 164 |
| IF Findings in Nonglomerular Structures . . . . .                                                                       | 166 |
| Cryoglobulins and Kidney . . . . .                                                                                      | 169 |
| 12. <i>General Differential Diagnosis Between Non-Glomerulonephritic Nephropathies and Glomerulonephritis</i> . . . . . | 173 |

**Part II. Histopathology of Specific Renal Disease States**

|                                                              |     |
|--------------------------------------------------------------|-----|
| 13. <i>General Aspects of Glomerulonephritis</i> . . . . .   | 177 |
| Nosology . . . . .                                           | 177 |
| Basic Morphologic Parameters of Glomerulonephritis . . . . . | 178 |
| Special Clinical Courses of Glomerulonephritis . . . . .     | 182 |
| General Pathogenesis of Glomerulonephritis . . . . .         | 183 |
| Immunocomplex Glomerulonephritis . . . . .                   | 184 |
| General Etiology of Glomerulonephritis . . . . .             | 187 |

|                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 14. <i>The Diffuse Forms of Glomerulonephritis</i> . . . . .                                                                                    | 188 |
| Diffuse Endotheliomesangial Glomerulonephritis . . . . .                                                                                        | 188 |
| Extracapillary Accentuated Glomerulonephritis . . . . .                                                                                         | 218 |
| Membranoproliferative Glomerulonephritis . . . . .                                                                                              | 231 |
| Intramembranous Glomerulonephritis . . . . .                                                                                                    | 252 |
| Epimembranous Glomerulonephritis . . . . .                                                                                                      | 261 |
| Mixed Form of Epimembranous and Membranoproliferative<br>Glomerulonephritis . . . . .                                                           | 279 |
| 15. <i>Focally Accentuated Glomerulonephritis</i> . . . . .                                                                                     | 282 |
| Embolic, Purulent Focal Glomerulitis, and Thrombotic-Induced<br>Glomerulonephritis . . . . .                                                    | 282 |
| Embolic Purulent Focal Glomerulitis . . . . .                                                                                                   | 282 |
| Segmental-Focal Glomerulonephritis in Subacute Bacterial<br>Endocarditis . . . . .                                                              | 283 |
| Segmental-Focal Glomerulonephritis Associated With Generalized<br>Intravascular Coagulation . . . . .                                           | 287 |
| Segmental-Focal Proliferative and Sclerosing Glomerulonephritis, Focal-<br>Global Sclerosing Glomerulonephritis and Overload Glomerulitis . . . | 289 |
| Segmental-Focal Proliferative Glomerulonephritis (Proliferative FGN)                                                                            | 289 |
| Segmental-Focal Sclerosing Glomerulonephritis (Sclerosing FGN)                                                                                  | 296 |
