1.	<i>Introduction.</i> By I.A. Sellin	1
2.	<i>Quantum Electrodynamics in Strong and Supercritical Fields.</i> By S.J. Brodsky and P.J. Mohr	3
2.1	The Electrodynamics of High-Z Electronic Atoms	5
2.1.1	Lamb Shift in Hydrogenlike Ions	5
2.1.2	Lamb Shift in Heliumlike Ions	8
2.1.3	Quantum Electrodynamics in High-Z Neutral Atoms	10
2.1.4	High-Z Atoms and Limits on Nonlinear Modifications of QED	12
2.1.5	Wichmann-Kroll Approach to Strong-Field Electrodynamics	13
2.2	The Electrodynamics of High-Z Muonic Atoms	16
2.2.1	General Features	16
2.2.2	Vacuum Polarization	19
2.2.3	Additional Radiative Corrections	25
2.2.4	Nuclear Effects	26
2.2.5	Electron Screening	27
2.2.6	Summary and Comparison With Experiment	28
2.2.7	Muonic Helium	32
2.2.8	Nonperturbative Vacuum Polarization Modification and Possible Scalar Particles	35
2.3	Quantum Electrodynamics in Heavy-Ion Collisions and Supercritical Fields	36
2.3.1	Electrodynamics for $Z\alpha > 1$	36
2.3.2	Spontaneous Pair Production in Heavy-Ion Collisions	42
2.3.3	Calculation of the Critical Internuclear Distance	46
2.3.4	Calculation of the Spontaneous Positron Production Rate	47
2.3.5	Induced Versus Adiabatic Pair Production	52
2.3.6	Vacancy Formation in Heavy-Ion Collisions	56
2.3.7	Nuclear Excitation and Other Background Effects	57
2.3.8	Radiative Corrections in Critical Fields	58
2.3.9	Coherent Production of Photons in Heavy-Ion Collisions	60

2.3.10 Self-Neutralization of Matter	61
2.3.11 Very Strong Magnetic Field Effects	61
2.4 Conclusion	62
References	63
3. <i>Relativistic Effects in Highly Ionized Atoms.</i> By L. Armstrong, Jr.	69
3.1 Background	69
3.2 Interactions	75
3.2.1 Relativistic Interactions	75
The Dirac Equation	75
Two-Body Interactions	78
The Central Field Approximation	81
3.2.2 Nonrelativistic Interactions	81
3.3 Transition Operators	84
3.3.1 The Interaction	84
3.3.2 Effective Transition Operators	89
3.3.3 Dipole Oscillator, Line, and Momentum Strengths	91
3.4 Calculation of Wave Functions and Energies	92
3.4.1 1/Z Expansion	92
3.4.2 Parametric Potentials	94
3.4.3 Hartree-Fock	96
3.5 Results	98
References	101
4. <i>Theory of Inelastic Atom-Atom Collisions.</i>	
By J.S. Briggs and K. Taulbjerg	105
4.1 Quantum-Mechanical Treatment of Nuclear Motion	107
4.1.1 Expansion in a Finite Basis	107
4.1.2 The First Born Approximation for Excitation and Ionization ...	109
4.1.3 Incident Bare Nucleus	111
4.1.4 Incident Neutral Atom or Ion Carrying Electrons	112
4.1.5 Comments on the Validity of the PWBA	117
4.1.6 The Binary Encounter Approximation	120
4.1.7 Charge Exchange in Fast Collisions	122
4.1.8 Slow Collisions of Atoms	126
4.2 Classical Treatment of Nuclear Motion	129
4.2.1 Coupled Equations in the Impact Parameter Method	129
4.2.2 Expansion in Target Eigenfunctions	134
4.2.3 Eigenfunction Expansions on More Than One Center	142
4.2.4 Molecular Eigenfunction Expansion	147
References	151

5. <i>Excitation in Energetic Ion-Atom Collisions Accompanied by Electron Emission.</i> By N. Stolterfoht	155
5.1 Historical Background	156
5.2 General Considerations	157
5.3 Outer-Shells	163
5.3.1 Target Ionization	163
5.3.2 Projectile Ionization	169
5.4 Inner-Shells	174
5.4.1 Auger Spectra	174
5.4.2 Direct Excitation	178
5.4.3 Electron Promotion	183
5.4.4 Vacancy Sharing	190
References	197
6. <i>X-Ray Production in Heavy Ion-Atom Collisions.</i>	
By P.H. Mokler and F. Folkmann	201
6.1 Measurement of X-Rays	203
6.1.1 Atomic Transitions, Fluorescence Yields, and Lifetimes	203
6.1.2 X-Ray Detectors	207
6.1.3 High Resolution X-Ray Data	212
6.2 Direct Ionization	215
6.2.1 Coulomb Excitation, Simple Description	215
6.2.2 Perturbation Improvements for Coulomb Ionization	219
6.2.3 Impact Parameter Dependent Direct Ionization	221
6.2.4 Electron Capture	227
6.2.5 Complex Excitation	228
6.3 Quasi-Molecular Excitation, $Z_1 \sim Z_2$	230
6.3.1 The Electron Promotion Model	230
6.3.2 K-Shell Ionization	235
6.3.3 Impact Parameter Dependence	239
6.3.4 L- and M-Shell Excitation	242
6.4 Quasi-Molecular Radiation	245
6.4.1 General Considerations	245
6.4.2 The Double Collision Mechanism - The L-MO Radiation	247
6.4.3 The Quasi-Atomic Approximation - The M-MO Radiation	250
6.4.4 Collision Broadening Effects - The K-MO Radiation	254
6.4.5 MO Emission Characteristics and Anisotropies	258
6.5 Bremsstrahlung and Radiative Electron Capture	262
6.5.1 Electron Bremsstrahlung	262
6.5.2 Nucleus-Nucleus Bremsstrahlung	265
6.5.3 Radiative Electron Capture	266
References	268

7. <i>Extensions of Beam Foil Spectroscopy. By I.A. Sellin</i>	273
7.1 Extension of the Dynamic Range of Lifetime Measurements Using the Beam-Foil Technique	282
7.2 Target Ion Recoil Spectroscopy	288
7.3 Projectile Electron Spectroscopy and Lifetime Measurements	296
References	305
 8. <i>Atomic Collisions in Solids. By S. Datz</i>	309
8.1 Channeling	311
8.1.1 Atomic Interactions from Planar Channeling Measurements	313
8.1.2 Hyperchanneling	318
8.2 Charge State Distributions	321
8.2.1 Effects of Channeling	323
8.3 Stopping Power	326
8.4 Inner-Shell Ionization	332
8.4.1 Exit Channel Effects	333
8.4.2 Level Shifting Effects	334
8.4.3 Solid-State Effects on Vacancy Lifetimes	335
8.4.4 Effects on the Relaxation of Target Atom Vacancies	339
8.4.5 Relation of Inner-Shell Vacancies to Emergent Charge State Distributions	340
References	344
