1.	Fundamentals of Three-Body Scattering Theory. By I.R. Afnan and A.W. Thomas	1
1.1	Two-Body Scattering	2
1.1.1	The Schrödinger Equation	2
1.1.2	The Differential Cross Section	3
1.1.3	The Scattering Integral Equation	4
1.1.4	The Two-Body t-Matrix	6
1.1.5	The Separable Potential	11
1.2	The Simplest Three-Body Problem	13
1.2.1	Notation	14
1.2.2	The Two-Body t-Matrix in the Three-Body System	15
1.3	Three Distinguishable Particles - Wave Function Approach	17
1.3.1	The Non-Uniqueness Problem	17
1.3.2	The Solution (3→3)	20
1.3.3	Scattering from a Two-Body Bound State	22
1.4	The Faddeev Equations (3→3)	23
1.4.1	A Rigorous Derivation of Faddeev Equations for $G(z)$	23
1.4.2	The Three-Body t-Matrix	24
1.5	Bound State Scattering	26
1.5.1	The Amplitudes U_{ji}	26
1.5.2	Break-Up in Terms of U_{ji}	28
1.5.3	Calculation of Cross-Sections	29
1.6	Unitarity	30
1.6.1	Formal Expression for $\text{disc } \{U_{ji}\}$	30
1.6.2	Meaning for Elastic Bound State Scattering	32
1.6.3	Remarks	32
1.7	Identical Particles	33
1.8	Three-Body Scattering With Separable Interactions	35
1.8.1	General Formulation	35
1.8.2	Three Identical Particles	38
1.9	Rotationally Invariant Equations for Separable Interactions	38

1.10 Conclusion	41
Appendix	42
References	46
2. Analytic Structure of On-Shell Three-Body Amplitudes. By L.R. Dodd	49
2.1 Background	49
2.2 The Fredholm Representation of On-Shell Amplitudes	51
2.2.1 Definition of Amplitudes in the Separable Potential Model	51
2.2.2 Singularities of Multiple Scattering Terms	53
2.2.3 The Elastic Amplitude	57
2.2.4 The Break-Up Amplitude	59
2.2.5 The Free-Particle Amplitude	59
2.2.6 Remark on the Rotation of Contours Method	60
2.3 Analytic Continuation in Energy of the On-Shell Amplitudes	61
2.3.1 The Elastic Amplitude	61
2.3.2 Location of Singularities of the Elastic Amplitude	63
2.3.3 Minimal Three-Body Scattering	66
2.3.4 The Break-Up and Free-Scattering Amplitudes	67
2.3.5 Summary	70
2.4 On-Shell Calculations	71
2.4.1 Dispersion Relations and the N/D Method	71
2.4.2 Calculations for the Three-Nucleon System	74
2.4.3 Other Applications	79
2.5 Conclusions	80
Appendix	80
References	82
3. Theory of Three-Body Final States. By R.D. Amado	85
3.1 The Problem	85
3.2 Coherence	86
3.3 The Two-Body Case	88
3.4 The Three-Body Case	91
3.5 Spinless Boson Example	95
3.6 Implementing Unitarity and Analyticity	97
3.7 Three Identical Bosons Again	100
3.8 Conclusions	103
References	104
4. The Boundary Condition Method. By D.D. Brayshaw	105
4.1 Fundamentals	105
4.2 Two-Particle Description	107

4.3	Boundary Conditions for Three-Particle Scattering	110
4.4	The BCF Integral Equation	114
4.5	Practical Evaluation of the Kernel	119
4.6	The Interior Region	122
4.7	Summary of the Formal Work	127
4.8	An Example	129
4.9	Discussion	135
References		138
5.	A Relativistic Three-Body Theory. By R. Aaron	139
5.1	Derivation of the Basic Equations - Spinless Case	140
5.1.1	Unitarity; Relativistic Two-Body Problem	141
5.1.2	Relativistic Three-Body Equations: Spinless Particles ...	144
5.2	Spin and Isospin	150
5.2.1	Isospin	150
5.2.2	Integral Spin	151
5.2.3	Spin-1/2 and the Pion-Nucleon Interaction	155
5.2.4	Spin-3/2 ($\Delta(1236) \rightarrow \pi + N$)	157
5.3	Physical Input: Blankenbecler-Sugar vs. Feynman, etc.	158
5.4	Application of Relativistic Three-Body Formalism	161
5.4.1	Inelastic Effects and π -N Resonances	162
5.4.2	Further Applications	166
5.5	Present Developments - Three-Body Phenomenology	167
5.5.1	Data Analysis of Single Pion Production in πN Collisions in the CM Energy Range of 1300-2000 MeV	170
5.5.2	Three-Pion System	170
Appendix A		171
Appendix B		172
