

CONTENTS

1. Introduction	1
Table 1.1. Monographs and other general references	2
2. One-particle problems	5
2.1. Special relativity and the old quantum theory	5
2.2. On the Klein-Gordon equation	5
2.3. The Dirac equation	6
Table 2.1. The Dirac equation: interpretative studies, symmetry properties and non-relativistic limits.	7
Table 2.2. The Dirac equation: further transformations.	13
Table 2.3. The Dirac equation: solutions for hydrogen-like systems.	16
Table 2.4. The Dirac equations: solutions for various non-coulomb fields.	21
Table 2.5. Relativistic virial theorems	26
3. Quantum electrodynamical effects	27
Table 3.1. Higher-order corrections: methods.	27
Table 3.2. Higher-order corrections: hyperfine interactions.	32
Table 3.3. Higher-order corrections: energy levels.	33
Table 3.4. Higher-order corrections: interatomic and -molecular interactions.	35
4. Multielectron atoms: methods	36
Table 4.1. General methods and basic theory for multielectron atoms.	37
Table 4.2. Published programs for atoms.	40
Table 4.3. Numerical, non-statistical four-component methods.	41
Table 4.4. Four-component LCAO approaches for many-electron atoms.	42
Table 4.5. Various four-component local-density methods.	43
Table 4.6. Thomas-Fermi calculations.	44
Table 4.7. Independent-particle models.	46
Table 4.8. Definitions, reviews and background for effective potential calculations.	47
Table 4.9. Effective-potential methods.	48
Table 4.10. Available relativistic effective potentials.	50
Table 4.11. One-component and perturbation calculations.	53
Table 4.12. $(1/Z)$ - and other similar expansions for many-electron atoms.	55

5. Multielectron atoms: results	57
Table 5.1. Tabulations of atomic ground-state properties.	58
Table 5.2. Data on atomic energy levels.	58
Table 5.3. Auger and autoionization processes.	73
Table 5.4. Ionization potentials and electron affinities.	75
Table 5.5. Supercritical ($Z > 137$) systems.	77
Table 5.6. Electromagnetic transition probabilities.	79
Table 5.7. Polarisabilities and screening constants.	85
Table 5.8. Electric and magnetic hyperfine properties.	86
Table 5.9. Average radii $\langle r^n \rangle$ and magnetic g-factors.	90
Table 5.10. Compton profiles, momentum distributions and spin densities.	92
Table 5.11. X-ray scattering factors.	93
Table 5.12. Electron and positron scattering.	94
Table 5.13. Particle-atom collisions.	97
Table 5.14. Photon scattering and photoionization.	99
Table 5.15. Atom-atom collisions and interatomic potentials.	103
Table 5.16. Nuclear processes involving electronic wave functions.	104
Table 5.17. Parity-violation effects in atoms and molecules.	106
6. Symmetry	108
Table 6.1. Theory of double groups and related aspects.	108
Table 6.2. Available data for double groups.	110
Table 6.3. Time-reversal symmetry and related questions.	111
7. Molecular calculations	112
Table 7.1. One-electron systems.	113
Table 7.2. LCAO-DF calculations on molecules.	115
Table 7.3. Molecules treated by the DF-OCE method.	117
Table 7.4. Molecules treated by the DS-DVM method.	119
Table 7.5. Molecules treated by the DS-MS $X\alpha$ method.	122
Table 7.6. Molecules treated by the quasirelativistic DS-MS $X\alpha$ approach.	124
Table 7.7. Molecules treated by pseudopotential methods.	128
Table 7.8. Molecules treated by the Perturbative Hartree-Fock- Slater (P-HFS) method.	139
Table 7.9. First-order perturbation theory on molecules.	142
Table 7.10. Density functional calculations.	143
Table 7.11. Semiempirical methods.	144
Table 7.12. Relativistic crystal field theory.	147
Table 7.13. Relativistic theories of molecular properties.	149
8. Solid-state theory	150
Table 8.1. Band-structure calculations.	150

9. Relativistic effects and heavy-element chemistry	153
Table 9.1. "Relativity and the periodic system". Periodic trends, reviews and pedagogical papers.....	154
Table 9.2. Bond lengths.....	159
Table 9.3. Dissociation and interaction energies.....	161
Table 9.4. Force constants.....	162
Table 9.5. Molecular fine-structure splittings.....	163
Table 9.6. Magnetic resonance parameters.....	164
Table 9.7. Electric dipole moments and molecular charge distributions.....	165
Table 9.8. Molecular energy levels and energy transfer.....	166
Table 9.9. Molecular ionization potentials and electron affinities.....	167
Some comments on notations and terminology.....	169
List of acronyms and symbols.....	171
Bibliography.....	175
