

TABLE OF CONTENTS

1. INTRODUCTION	1
2. GENERAL THEORY OF THIN ELASTIC SHELLS	4
3. LINEAR ANALYSIS OF THIN SHELLS OF REVOLUTION USING FINITE ELEMENT METHOD	8
3.1: Introduction	8
3.2: Geometric Parameters and Relations of Shells of Revolution	9
3.2.1: Geometric Characteristics of Hyperboloid of Revolution	11
3.3: Basic Equations of Elasticity for Shells of Revolution	15
3.3.1: Kinematic Equations	15
3.3.2: Equilibrium Equations	16
3.3.3: Constitutive Equations	16
3.4: Fourier Analysis	18
3.4.1: Representation of Distribution of Wind Pressure on Cooling Tower Shells	19
3.5: Finite Element Formulation	23
3.5.1: Idealisation of Geometry of a Shell of Revolution	25
3.5.2: Geometric Derivation of a Doubly Curved Element	27
3.5.3: Element Displacement Function	31
3.5.4: Determination of the Equations of Equilibrium	36
3.5.5: Element Local and Global Coordinates, and Displacement Transformation Matrix	37
3.5.6: Derivation of Element Stiffness Matrix and Equivalent Load Vector	40
3.5.6.1: General and Nodal Displacements	40
3.5.6.2: General Strains and Stress Resultants	43

3.5.6.3: Strain Energy	44
3.5.6.4: Potential Energy of External Loads	46
3.5.6.5: Total Potential Energy	49
3.5.6.6: Equilibrium	50
3.5.7: Assembly of Elements	52
3.5.8: Application of Boundary Condition and Solution of the System of Equations	53
3.5.9: Calculation of the Stress Resultants	54
3.6: Examples	54
4. HYPERBOLIC COOLING TOWERS ON DISCRETE-FLEXIBLE SUPPORT SYSTEM	63
4.1: Introduction	63
4.2: Continuous-Flexible Boundary Analysis	68
4.3: Discrete-Flexible Boundary Analysis	74
4.3.1: Derivation of Self-Equilibrated Edge Loading "Shell under Asymmetrical Applied Forces"	74
4.3.2: Derivation of Self-Equilibrated Edge Loading "Shell under Axisymmetrical Applied Forces"	80
4.3.3: Final Solution	82
4.4: Results, Discussions and Conclusions	83
5. HYPERBOLIC COOLING TOWERS WITH GEOMETRIC IMPERFECTION	97
5.1: Introduction	97
5.2: Method of Geometric Simulation of Imperfection	99
5.2.1: Geometric Simulation of a Meridional Axisymmetrical Imperfection	99
5.2.2: Geometric Simulation of a Patch Imperfection	101
5.3: The Method of the Equivalent Load Simulation of Geometric Imperfections	103
5.3.1: The Equivalent Normal Load of an Axisymmetric Geometrical Imperfection	104
5.3.2: The Equivalent Normal Load of a Non-Axisymmetrical Geometrical Imperfection	108

5.3.3:	The Higher Order Approximation of the Equivalent Load	112
5.3.4:	Derivation of the Equivalent Load for a Shell of Revolution under Wind and Dead Loading with Axisymmetric Imperfection	114
5.3.5:	Derivation of the Equivalent Load for a Shell of Revolution under Wind and Dead Loading with Non- Axisymmetrical Imperfection	115
5.4:	Results, Discussions and Conclusions	121
6.	NON-LINEAR ANALYSIS OF HYPERBOLIC COOLING TOWERS	141
6.1:	Introduction	141
6.2:	Structural Non-Linearity	143
6.3:	Equilibrium Equation of Non-Linear Systems	145
6.4:	Numerical Techniques	147
6.4.1:	Newton-Raphson Method	147
6.4.2:	Simple Iteration	149
6.4.3:	Linearised Incremental Method	150
6.5:	Theory and Formulation of Geometric Non-Linear Shells of Revolution	152
6.5.1:	Kinematic Equations	152
6.5.2:	Idealisation of the Geometry and the Displacement Functions	154
6.5.3:	Derivation of Strain Energy Expression	156
6.5.4:	Derivation of the Element Non-Linear Strain Energy	158
6.6:	Overall Solution Procedure	164
6.7:	Results and Conclusion	165
REFERENCES		193
Appendix 1		
	Elasticity Matrix	201
Appendix 2		203
Appendix 3		
	Force Density Vectors	206
Appendix 4		
	Derivation of Stiffness Matrix of the Support Columns at Interface	208
Appendix 5		
	Derivation of Equivalent Nodal Forces of Distributed Edge Loading	215
