Contents

1. The Laser – An Unprecedented Light Source 1
1.1 The Properties of Laser Light 1
1.1.1 Directivity 1
1.1.2 Monochromaticity 2
1.1.3 Energy Density and Brightness 3
1.1.4 Ultrashort Pulses 4
1.2 Solid-State Lasers 5
1.3 Gas Lasers 7
1.3.1 Atomic Gas Lasers 7
1.3.2 Molecular Lasers 10
1.4 Dye Lasers 13
1.5 Semiconductor Lasers 14
1.6 Other Lasers and Laser Physics 18
Problems 19

2. The Coherence of Light 21
2.1 Young's Experiment 21
2.2 The Michelson Interferometer 23
2.3 Temporal Coherence and Spatial Coherence 25
2.4 Complex Representation of Light Field 28
2.5 Coherence Function 30
Problems 33

3. Electromagnetic Theory of Light 35
3.1 Maxwell's Equations 35
3.2 Reflection and Refraction of Light 39
3.3 Total Reflection 42
3.4 Fabry-Perot Resonator 47
3.5 Fabry-Perot Interferometer 49
3.6 Planar Waveguide 53
3.7 Gaussian Beam 59
3.8 Optical Resonators 63
3.8.1 Spot Size and Stability in Spherical Mirror Resonator . . 64
3.8.2 Frequency of Resonance in Spherical-Mirror Configuration 67
3.8.3 Other Types of Optical Resonators 68
Problems 69

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4. Emission and Absorption of Light 72
4.1 Mode Density of Electromagnetic Waves 72
4.2 Planck's Law of Thermal Radiation 75
4.3 Spontaneous Emission and Stimulated Emission 78
4.4 Dipole Radiation and Probability of Spontaneous Emission . . 81
4.5 Absorption of Light 85
4.6 Complex Susceptibility and Refractive Index 87
Problems 91

5. Principle of the Laser 93
5.1 Population Inversion 93
5.2 Population Inversion in a Three-Level Laser 95
5.3 Population Inversion in a Four-Level Laser 98
5.4 Laser Amplification 100
5.5 Conditions for Laser Oscillation 101
5.6 Frequency of Laser Oscillation 106
Problems 109

6. Output Characteristics of the Laser 112
6.1 Rate Equations of the Laser 112
6.2 Steady-State Output 114
6.3 Oscillation Build-Up 117
6.4 Relaxation Oscillation 119
6.5 Q-Switching 122
Problems 127

7. Coherent Interaction 128
7.1 Interaction Between a Two-Level Atom and a Coherent Field . 128
7.2 Induced Dipole Moment and Induced Emission Coefficient . . 132
7.3 Density Matrix 134
7.4 Equations of Motion of the Density Matrix 137
7.5 Optical Bloch Equations 141
7.5.1 Transformation to an Abstract Space 141
7.5.2 Representation in a Rotating Frame of Reference 143
7.5.3 Terms Representing Longitudinal Relaxation and Transverse Relaxation 145
Problems 146

8. Nonlinear Coherent Effects 148
8.1 Saturation Effect 148
8.2 Change in the Atomic Populations Due to Saturated Absorption 152
8.3 Nonlinear Complex Susceptibility 155

8.4 Inhomogeneous Broadening 157
8.4.1 Doppler Broadening 157
8.4.2 Nonlinear Susceptibility with Doppler Broadening 159
8.5 Hole-Burning Effect 162
8.6 Coherent Transient Phenomena 165
8.6.1 Optical Nutation 169
8.6.2 Free Induction Decay 170
8.6.3 Photon Echo 171
8.6.4 Self-Induced Transparency 173
Problems 176

9. Theory of Laser Oscillation 178
9.1 Fundamental Equations of the Semiclassical Theory 178
9.2 Single-Mode Oscillation 182
9.2.1 Steady-State Oscillation 183
9.2.2 van der Pol Equation 185
9.3 Multimode Oscillation 187
9.3.1 Competition Between Two Modes of Oscillation 187
9.3.2 Existence of Combination Frequencies 191
9.4 Mode Locking 193
9.5 Theory of the Gas Laser 196
9.5.1 Density Matrix of a Gas of Molecules in a Standing-Wave Field 197
9.5.2 Approximate Solutions by Iteration 199
9.5.3 Output Characteristics in the Third-Order Approximation (Lamb Dip) 202
9.6 Fully Quantum-Mechanical Theory of the Laser 204
Problems 206
