1	Quantum Phase Transitions of Antiferromagnets and the Cuprate Superconductors.	1
1.1	Introduction.	1
1.2	Insulators	6
1.2.1	Coupled Dimer Antiferromagnets: Bond Operators	6
1.2.2	Frustrated Square Lattice Antiferromagnets: Schwinger Bosons	13
1.3	<i>d</i> -Wave Superconductors	30
1.3.1	Dirac Fermions	31
1.3.2	Magnetic Ordering	32
1.3.3	Ising Transitions	36
1.4	Metals	42
1.4.1	SDW Ordering.	43
1.4.2	Nematic Ordering	45
	References	46
2	Electronic Liquid Crystal Phases in Strongly Correlated Systems	53
2.1	Electronic Liquid Crystal Phases	53
2.1.1	Symmetries of Electronic Liquid Crystal Phases	54
2.1.2	Order Parameters and Their Symmetries	56
2.1.3	Electronic Liquid Crystal Phases and Strong Correlation Physics	58
2.2	Experimental Evidence in Strongly Correlated Systems	60
2.2.1	Nematic Phases in the 2DEG in High Magnetic Fields	60
2.2.2	The Nematic Phase of $\text{Sr}_3\text{Ru}_2\text{O}_7$	62
2.2.3	Stripe Phases and Nematic Phases in the Cuprates	63
2.2.4	Conventional CDW Materials	70

2.3	Theories of Stripe Phases	71
2.3.1	Stripe Phases in Microscopic Models	71
2.3.2	Phases of Stripe States	74
2.4	Is Inhomogeneity Good or Bad for Superconductivity?	79
2.5	The Striped Superconductor: A Pair Density Wave State	81
2.5.1	Landau–Ginzburg Theory of the Pair Density Wave.	83
2.5.2	Charge $4e$ SC Order and the Topological Excitations of the PDW SC State	85
2.6	Nematic Phases in Fermi Systems	87
2.6.1	The Pomeranchuk Instability	87
2.6.2	The Nematic Fermi Fluid	89
2.7	Generalizations: Unconventional Magnetism and Time Reversal Symmetry Breaking	95
2.8	Nematic Order in the Strong Correlation Regime.	98
2.9	The Quantum Nematic-Smectic QCP and the Melting of the Stripe Phase.	101
2.10	Outlook	105
	References	106
3	Selected Topics in Graphene Physics	117
3.1	Introduction.	117
3.2	The Chemistry.	119
3.3	The Crystal and Band Structure.	123
3.4	Phonons in Free Floating Graphene	129
3.5	Constrained Graphene.	132
3.6	Deformed Graphene	135
3.6.1	A Non-Trivial Example: The Scroll	139
3.7	Conclusions.	142
	References	143
4	Strong Electronic Correlations: Dynamical Mean-Field Theory and Beyond	145
4.1	The Physics of Strongly Correlated Materials	146
4.1.1	Theoretical Description.	147
4.2	The Dynamical Mean-Field Theory Construction: An Embedded Atom.	148
4.2.1	A Reminder on Classical Mean-Field Theory	149
4.2.2	Generalization to the Quantum Case: Dynamical Mean-Field Theory.	150
4.2.3	The Embedded Atom as an Anderson Impurity Model	152
4.2.4	The Self-Consistency Loop in Practice	152

4.3	The Metal to Mott Insulator Transition from a DMFT Perspective.	153
4.4	From Models to Real Materials: Combining DMFT with First-Principle Electronic Structure Methods	156
4.4.1	Illustrations	162
4.5	Efficient Algorithms for Solving Multiorbital Quantum Impurity Problems	164
4.5.1	Interaction Expansion Algorithm	164
4.5.2	Monte Carlo Sampling	167
4.5.3	Fast Update Formulae.	167
4.5.4	Measurement of Green's Function	169
4.5.5	Sign Problem and α -Parameters	172
4.5.6	Hybridization Expansion Algorithm	172
4.5.7	Measurement of Green's Function	176
4.6	Cluster Extensions of DMFT: Short-Range Non-Local Correlations.	177
4.7	Long-Range Correlations and the Dual-Fermion Perturbation Expansion.	182
4.7.1	Formalism.	184
4.7.2	Dual Perturbation Theory	187
4.7.3	Exact Relations	188
4.7.4	Self-Consistency Condition and Relation to DMFT	190
4.7.5	Numerical Results	192
4.7.6	Generalizations of the Dual Fermion Approach	195
4.7.7	Cluster Dual Fermion Approach	195
4.7.8	Calculation of Susceptibilities	201
4.7.9	Ladder Approximation	204
4.7.10	Convergence Properties	207
	References	209

5	Nonequilibrium Transport and Dephasing in Coulomb-Blockaded Quantum Dots	215
5.1	Introduction.	215
5.2	Coulomb Blockade Phenomena in Quantum Dots	216
5.2.1	Basics.	216
5.2.2	Energy Scales	218
5.2.3	Coulomb Blockade and Transport Regimes.	219
5.2.4	Kondo Effect in Quantum Dots	221
5.3	Keldysh Approach	224
5.3.1	Basic Idea.	224
5.3.2	Boson Mode	226
5.3.3	Fermion Mode.	230

5.4	Ambegaokar-Eckern-Schön Action Within Keldysh Approach.	232
5.4.1	Model.	232
5.5	Nonequilibrium Dephasing	237
5.5.1	Tunneling Density of States	237
5.5.2	Strong Tunneling: Open Dot	239
5.6	Conclusions.	242
