

Table of Contents

Track 1: Future Internet Testbeds

ToMaTo - A Network Experimentation Tool	1
<i>Dennis Schwerdel, David Hock, Daniel Günther, Bernd Reuther, Paul Müller, and Phuoc Tran-Gia</i>	
Evaluating a Future Internet Cross-Layer Composition Prototype	11
<i>Julius Mueller, Abbas Siddiqui, Martin Becke, Michael Kleis, and Konrad Campowsky</i>	
SONoMA: A Service Oriented Network Measurement Architecture	27
<i>Béla Hullár, Sándor Laki, József Stéger, István Csabai, and Gábor Vattay</i>	
StarBED and SpringOS Architectures and Their Performance	43
<i>Toshiyuki Miyachi, Takeshi Nakagawa, Ken-ichi Chinen, Shinsuke Miwa, and Yoichi Shinoda</i>	

Track 2: Future Wireless Testbeds

A Radio Spectrum Measurement Platform for Spectrum Surveying in Cognitive Radio	59
<i>Miguel López-Benítez and Fernando Casadevall</i>	
User Centric Wireless Testbed	75
<i>Mürsel Yildiz, Ahmet Cihat Toker, Fikret Sivrikaya, and Sahin Albayrak</i>	
Development of a MIMO/OFDM-Based Gbps Wireless Testbed for IMT-Advanced Technologies	88
<i>Xiangyang Wang, Yang Yang, Wuxiong Zhang, and Xiaohu You</i>	

Track 3: Federated and Large Scale Testbeds

Resource Description in Large Scale Heterogeneous Resource Federations	100
<i>Sebastian Wahle, Christos Tranoris, Shane Fox, and Thomas Magedanz</i>	
Interconnecting International Network Substrates for Networking Experiments	116
<i>Namgon Kim, JongWon Kim, Chris Heermann, and Ilia Baldine</i>	

A Path to Evolve to Federation of TestBeds	126
<i>Soner Sevinc</i>	

Track 4: Network and Resource Virtualization

OFIAS: A Platform for Exploring In-Network Processing	142
<i>Ping Du, Maoke Chen, and Akihiro Nakao</i>	
A Service Oriented Experimentation Framework for Virtualized WiMAX Systems	152
<i>Gautam Bhanage, Ivan Seskar, and Dipankar Raychaudhuri</i>	

Track 5: Overlay Network Testbeds

On Creating Overlay Routing Topologies between Heterogeneous Experimental Facilities	162
<i>Christian Henke, Robert Wuttke, Tanja Zseby, and Konrad Campowsky</i>	
Scalable Star-Topology Server-Array Based P2P Overlay Network Testbed	172
<i>Otso Kassinen, Erkki Harjula, and Mika Ylianttila</i>	
Dynamic Virtual Overlay Networks for Large Scale Resource Federation Frameworks	180
<i>Sebastian Wahle, André Steinbach, Thomas Magedanz, and Konrad Campowsky</i>	

Track 6: Management Provisioning and Tools for Networking Research

Storage Deduplication and Management for Application Testing over a Virtual Network Testbed	193
<i>Chang-Han Jong, Pin-Jung Chiang, Taichuan Lu, and Cho-Yu Chiang</i>	
Guidelines for the Accurate Design of Empirical Studies in Wireless Networks	208
<i>Cristian Tala, Luciano Ahumada, Diego Dujovne, Shafqat-Ur Rehman, Thierry Turletti, and Walid Dabbous</i>	
A Portal to Support Rigorous Experimental Methodology in Networking Research	223
<i>Guillaume Jourjon, Thierry Rakotoarivelo, and Max Ott</i>	

SensLAB: Very Large Scale Open Wireless Sensor Network Testbed	239
<i>Clément Burin des Rosiers, Guillaume Chelius, Eric Fleury,</i>	
<i>Antoine Fraboulet, Antoine Gallais, Nathalie Mitton, and</i>	
<i>Thomas Noël</i>	

Track 7: Experimentally Driven Research and User Experience Evaluation

Empirical Evaluation of Streamed Online Gaming over WiMAX	255
<i>Esa Piri, Matti Hirvonen, and Jukka-Pekka Laulajainen</i>	
A Framework and Experimental Study for Discrimination of Collision and Channel Errors in Wireless LANs	271
<i>Georgios Kyriakou, Donatos Stavropoulos, Iordanis Koutsopoulos, Thanasis Korakis, and Leandros Tassiulas</i>	
QoE-Lab: Towards Evaluating Quality of Experience for Future Internet Conditions	286
<i>Muhammad Amir Mehmood, Andreas Wundsam, Steve Uhlig, Dan Levin, Nadi Sarrar, and Anja Feldmann</i>	
Indriya: A Low-Cost, 3D Wireless Sensor Network Testbed	302
<i>Manjunath Doddavenkatappa, Mun Choon Chan, and A.L. Ananda</i>	
Author Index	317
