

# Contents

## 1. Introduction

By G. M. Sessler (With 2 Figures) . . . . .	1
1.1 Remarks on the History of Electret Research . . . . .	2
1.2 Survey of Physical Properties . . . . .	6
1.3 Organization of the Book . . . . .	8
References . . . . .	10

## 2. Physical Principles of Electrets

By G. M. Sessler (With 28 Figures)	13
2.1 Electric Fields, Forces, and Currents . . . . .	13
2.1.1 Fields Due to Charge Layers . . . . .	14
2.1.2 Fields Due to Volume-Charge Distributions . . . . .	15
2.1.3 Electric Forces . . . . .	17
2.1.4 Currents . . . . .	19
2.2 Charging and Polarizing Methods (Forming Methods) . . . . .	20
2.2.1 Triboelectricity: Contact Electrification . . . . .	22
2.2.2 Thermal Charging Methods . . . . .	24
2.2.3 Isothermal Charge – Deposition Methods . . . . .	30
2.2.4 Charging with Liquid Contact . . . . .	32
2.2.5 Partially Penetrating Electron and Ion Beams . . . . .	34
2.2.6 Penetrating Radiation . . . . .	36
2.2.7 Photoelectret Process . . . . .	37
2.3 Methods for Measuring Charge Density . . . . .	39
2.3.1 Dissectible Capacitor . . . . .	40
2.3.2 Capacitive Probe . . . . .	40
2.3.3 Dynamic Capacitor . . . . .	41
2.3.4 Compensation Method . . . . .	42
2.3.5 Thermal-Pulse Method . . . . .	42
2.3.6 Polarization and Depolarization Currents . . . . .	42
2.4 Methods for Measuring Charge Distributions . . . . .	43
2.4.1 Sectioning and Planing Methods . . . . .	43
2.4.2 Split Faraday Cup . . . . .	44
2.4.3 Combined Induction – Depolarization Method . . . . .	45
2.4.4 Light-Radiation Release Method . . . . .	46
2.4.5 Thermal-Pulse Method . . . . .	47

2.4.6 Pressure-Pulse Method . . . . .	48
2.4.7 Charge-Compensation Method . . . . .	49
2.4.8 Indirect Methods . . . . .	50
2.5 Methods for Discriminating between Polarization and Real Charges . . . . .	50
2.6 Permanent Dipole Polarization and Real-Charge Storage . . . . .	51
2.6.1 Retention and Decay of Dipole Polarization . . . . .	52
2.6.2 Retention of Real Charges . . . . .	54
2.6.3 Spatial Distribution of Dipole Polarization and Real Charges . . . . .	57
2.6.4 Analysis of the Isothermal Decay of Real Charges . . . . .	60
2.6.5 Experimental Results of Real-Charge Decay . . . . .	66
2.6.6 Conduction Phenomena . . . . .	72
References . . . . .	75

### 3. Thermally Stimulated Discharge of Electrets

By J. van Turnhout (With 85 Figures) . . . . .	81
3.1 Introduction . . . . .	83
3.2 Mechanisms Responsible for TSD . . . . .	90
3.3 Experimental Techniques . . . . .	95
3.4 Methods for Unravelling the Discharge Processes . . . . .	99
3.5 Applications of TSD . . . . .	104
3.6 Theory of Current TSD by Dipole Disorientation . . . . .	106
3.6.1 TSD of Dipoles with One Relaxation Time . . . . .	106
3.6.2 Thermally Stimulated Charging of a Polar Sample . . . . .	110
3.6.3 TSD of Dipoles with a Distribution of Relaxation Times . . . . .	112
3.6.4 Methods for Distinguishing Between a Distribution in $A$ and in $\alpha_0$ . . . . .	116
3.7 Theory of Current TSD by the Self-Motion of Charges . . . . .	118
3.8 Evaluation of TSD Current Data . . . . .	124
3.8.1 Calculation of Distribution Functions . . . . .	127
3.8.2 Evaluation of Data Pertaining to the Self-Motion of Space Charges . . . . .	130
3.9 Current TSD and Dielectric Measurements . . . . .	130
3.10 Current TSD Arising from the Detrapping of Charges . . . . .	135
3.10.1 Experimental Results of Corona- and Electron-Beam- Charged Electrets . . . . .	139
3.11 Some Illustrative Results of Current TSD of Heterocharged Electrets . . . . .	142
3.11.1 Inorganic Solids . . . . .	143
3.11.2 Organic Solids . . . . .	148
3.11.3 Organic Solids Incorporated in Clathrates . . . . .	149
3.11.4 Supercooled Organic Liquids . . . . .	150
3.11.5 Liquid Crystals . . . . .	150
3.11.6 Biological Materials . . . . .	151
3.11.7 Polymers . . . . .	153

3.11.8 Polyvinylidene Fluoride . . . . .	161
3.11.9 TSD Peaks Arising from the Self-Motion of Space Charges . . . . .	163
3.12 Current TSD of Heterogeneous Systems . . . . .	165
3.12.1 TSD by the Maxwell–Wagner Effect . . . . .	165
3.12.2 Air-Gap Current TSD by Ohmic Conduction and Dipole Disorientation . . . . .	167
3.13 Theory and Practice of Charge TSD . . . . .	170
3.13.1 Some Theoretical Notes . . . . .	171
3.13.2 Experimental Results . . . . .	177
3.13.3 Charge Decay Induced by Heat Pulses . . . . .	182
3.14 TSD of Thin Films and Semiconductor Devices . . . . .	184
3.14.1 Thermally Stimulated Current Measurements on Semiconductors . . . . .	188
3.14.2 Methods Using Thermally Stimulated Admittance and Capacitance . . . . .	189
3.14.3 Deep-Level-Transient Spectroscopy . . . . .	190
3.15 Analysis of Charge Detrapping by Other Techniques . . . . .	192
3.15.1 Thermoluminescence and Thermally Stimulated Conductivity . . . . .	192
3.15.2 Optical Charge Detrapping and TSEE . . . . .	196
3.16 Review of Information Obtainable from TSD . . . . .	198
3.17 Conclusions and Prospects . . . . .	199
References . . . . .	201

#### **4. Radiation-Induced Charge Storage and Polarization Effects**

By B. Gross (With 30 Figures) . . . . .	217
4.1 Radiation-Induced Conductivity . . . . .	218
4.1.1 Band-Gap Model . . . . .	218
4.1.2 Radiation-Induced Conductivity . . . . .	219
4.1.3 Radiation Quantities . . . . .	220
4.2 General Features of Excess-Charge Transport . . . . .	222
4.2.1 Electrode Effects . . . . .	222
4.2.2 The Zero-Field Theorem . . . . .	223
4.2.3 Ultimate Charge . . . . .	224
4.2.4 Carrier Mobilities . . . . .	225
4.2.5 Transport Equation . . . . .	227
4.2.6 “Floating” Charge Layer . . . . .	229
4.2.7 Diffusion . . . . .	229
4.3 Electron Beam Charging . . . . .	230
4.3.1 Range-Energy Relations for Electrons . . . . .	230
4.3.2 Charge Diagnostics with the Split Faraday Cup . . . . .	233
4.3.3 The Threshold Effect . . . . .	234
4.3.4 The Electron Beam as a Virtual Electrode . . . . .	235
4.3.5 Steady-State Currents as a Function of Electron Range . . . . .	236
4.3.6 Field- and Charge-Profiles in Irradiated Region . . . . .	238

4.4 Charge Diagnostics by Transient Analysis . . . . .	240
4.4.1 Equivalent Circuit Model and Circuit Equations . . . . .	240
4.4.2 Short-Circuit Charging and Discharging Currents . . . . .	242
4.4.3 Radiation-Induced Discharge . . . . .	243
4.4.4 Steady-State Radiation-Induced Conductivity . . . . .	243
4.4.5 Delayed Radiation-Induced Conductivity . . . . .	244
4.4.6 Charge Centroid . . . . .	246
4.4.7 Transit Time Effect and Determination of Mobility . . . . .	248
4.4.8 Breakdown Effects . . . . .	250
4.4.9 Radiation Hardening and Pressure-Activated Charge Release . . . . .	252
4.4.10 Summary of Electron Beam Data and Methods . . . . .	252
4.5 Gamma-Beam Charging . . . . .	253
4.5.1 Photo-Compton Current . . . . .	253
4.5.2 Space-Charge Formation . . . . .	254
4.5.3 Compton Diodes for Dosimetry . . . . .	256
4.6 Thermally Activated Processes . . . . .	256
4.6.1 Thermally Stimulated Currents and Voltages . . . . .	256
4.6.2 Peak Shift Effects . . . . .	258
4.6.3 Positive and Negative Charge Storage by Electron Injection . . . . .	260
4.6.4 Conductivity Glow Curves . . . . .	262
4.6.5 Conductivity Glow Curves for Teflon . . . . .	266
4.6.6 Short-Circuit TSC in a Temperature Gradient . . . . .	267
4.6.7 Radiation-Stimulated Polarization (Radioelectret) . . . . .	267
4.6.8 Polarization Effects in Ionic Solids . . . . .	269
4.7 Dosimetry . . . . .	272
4.7.1 Dosimetry with Self-Biased Systems . . . . .	272
4.7.2 Dosimetry with Externally Biased Systems . . . . .	274
References . . . . .	279

## 5. Piezo- and Pyroelectric Properties

By M. G. Broadhurst and G. T. Davis (With 18 Figures) . . . . .	285
5.1 Thermodynamic Definitions . . . . .	286
5.2 Physical Description of an Electret . . . . .	287
5.2.1 Preparation . . . . .	287
5.2.2 Real Charges – Monopolar Electrets . . . . .	287
5.2.3 Dipolar Electrets . . . . .	290
5.3 Symmetry and Tensor Components . . . . .	294
5.4 Structure . . . . .	296
5.4.1 General . . . . .	296
5.4.2 Amorphous Polymers . . . . .	296
5.4.3 Semicrystalline Polymers . . . . .	298
5.5 Properties of Semicrystalline Polymers . . . . .	301
5.5.1 Crystal Relaxations . . . . .	301
5.5.2 Ferroelectricity . . . . .	305
5.5.3 Space Charges . . . . .	308

5.6 Measurements and Data . . . . .	310
5.7 Dipole Model Applied to Semicrystalline Polymers . . . . .	312
5.8 Summary and Conclusions . . . . .	315
References . . . . .	315
 <b>6. Bioelectrets: Electrets in Biomaterials and Biopolymers</b>	
By S. Mascarenhas (With 14 Figures) . . . . .	321
6.1 Introductory Remarks . . . . .	321
6.2 General Concepts in Electret Research . . . . .	323
6.3 Other Dielectric Techniques Complementary to TSDC . . . . .	329
6.4 Proteins . . . . .	330
6.5 Bound Water (Structured Water or Biowater) . . . . .	332
6.6 Polysaccharides and Polynucleotides . . . . .	334
6.7 Enzymes . . . . .	336
6.8 Thermally Stimulated Pressure and Bound Water . . . . .	338
6.9 Bone, Artificial Biomaterials, and Biomedical Applications . . . . .	340
6.10 Natural Electrets . . . . .	341
6.11 Conclusions . . . . .	343
References . . . . .	344
 <b>7. Applications</b>	
By G. M. Sessler and J. E. West (With 28 Figures) . . . . .	347
7.1 Electret Transducers . . . . .	348
7.1.1 Microphones . . . . .	348
7.1.2 Directional Microphones . . . . .	355
7.1.3 Headphones and Loudspeakers . . . . .	358
7.1.4 Electromechanical Transducers . . . . .	359
7.1.5 Underwater Transducers . . . . .	361
7.2 Electrophotography . . . . .	362
7.2.1 Xerography . . . . .	362
7.2.2 Persistent-Conductivity Methods . . . . .	364
7.2.3 Photodielectric Processes . . . . .	364
7.3 Electrostatic Recording . . . . .	365
7.4 Electret Air Filters . . . . .	367
7.5 Electret Motors and Generators . . . . .	368
7.6 Electret Dosimeters . . . . .	369
7.7 Piezoelectric Polymer Transducers . . . . .	369
7.7.1 Transducer Principles . . . . .	370
7.7.2 Transducers Using Transverse Piezoelectric Effect . . . . .	371
7.7.3 Transducers Using Longitudinal Piezoelectric Effect . . . . .	375
7.8 Pyroelectric Polymer Devices . . . . .	376
7.8.1 Pyroelectric Response . . . . .	376
7.8.2 Applications . . . . .	376
References . . . . .	378

**8. Recent Progress in Electret Research**

By R. Gerhard-Multhaupt, B. Gross, and G. M. Sessler

(With 22 Figures) . . . . .	383
8.1 Introduction . . . . .	383
8.2 Physical Principles . . . . .	383
8.2.1 Charging and Poling . . . . .	384
8.2.2 Methods for the Measurement of Charge and Polarization Distributions . . . . .	386
8.2.3 Storage and Decay of Real and Dipolar Charges . . . . .	388
8.2.4 Conduction Phenomena . . . . .	391
8.3 Thermally Stimulated Discharge of Electrets . . . . .	392
8.3.1 Analysis and Refinement of TSD Methods . . . . .	393
8.3.2 Real-Charge Effects . . . . .	394
8.3.3 Dipole Effects . . . . .	396
8.4 Radiation Effects . . . . .	399
8.4.1 Conduction and Charge Transport . . . . .	399
8.4.2 Irradiation with X-Rays . . . . .	400
8.4.3 Irradiation with Partially Penetrating Electrons . . . . .	401
8.4.4 Analysis of Internal-Field and Space-Charge Distributions by Electron Beams . . . . .	403
8.4.5 Radiation-Induced Breakdown Effects . . . . .	404
8.4.6 Dosimetry . . . . .	405
8.5 Piezo-, Pyro-, and Ferroelectric Properties . . . . .	407
8.5.1 Molecular Conformation, Crystalline Structure and Morphology of Polyvinylidene Fluoride (PVDF) . . . . .	407
8.5.2 Copolymers and Blends (Alloys) with Polyvinylidene Fluoride (PVDF) . . . . .	408
8.5.3 Ferroelectricity and Switching in PVDF and Its Copolymers . . . . .	409
8.5.4 Other Piezo-, Pyro- or Ferroelectric Polymers . . . . .	411
8.5.5 Preparation, Modification, and Control of Piezo- and Pyroelectric Electrets . . . . .	411
8.5.6 Theoretical Descriptions of the Piezo-, Pyro-, and Ferroelectricity in Polymer Electrets . . . . .	413
8.6 Bioelectrets . . . . .	414
8.7 Applications . . . . .	415
8.7.1 Capacitive Transducers . . . . .	415
8.7.2 Air Filters . . . . .	416
8.7.3 Piezoelectric Polymer Devices . . . . .	417
8.7.4 Pyroelectric Polymer Sensors . . . . .	419
8.7.5 Other Electret Applications . . . . .	420
References . . . . .	420
<b>Partial List of Symbols . . . . .</b>	<b>433</b>
<b>Additional References with Titles . . . . .</b>	<b>435</b>
<b>Subject Index . . . . .</b>	<b>443</b>
