

Contents

Introduction	1
1 Basics of anatomy	3
1.1 Motor system	4
1.2 Sensory system	4
1.3 Vegetative system	7
1.4 Neuron	7
1.5 Peripheral nerve	8
1.6 Regeneration of the peripheral nerves	10
1.7 Denervation and reinnervation	12
1.8 Sequelae of nerve injuries on the sensory system and pain	14
2 Examination process	17
2.1 Motor function	19
2.1.1 Muscle tests of the upper extremity	19
2.1.2 Muscle tests of the lower extremity	22
2.2 Reflexes	23
2.2.1 Examination of reflexes	23
2.3 Sensitivity	23
2.3.1 Methods of testing sensitivity	25
2.4 Vegetative nervous system	32
2.4.1 Sympathetic skin innervation	33
3 Electrophysiology	37
4 Radicular lesions	41
4.1 Segmental innervation	42
4.2 Remarks on terminology	44
4.3 Overuse and disc herniation	46
4.4 Diagnostics	46
4.5 Therapy of a herniated disc	49
4.5.1 Conservative or operative therapy	50
4.5.2 The "failed back syndrome"	51
4.6 Cervical root syndromes	52
4.6.1 Cervical myelopathy	53
4.7 Lumbar root syndromes	56
4.7.1 Conus/cauda lesion	59
4.7.2 Spondylolisthesis	60
5 Lesions of single nerves	63
5.1 Trigeminal nerve	65
5.1.1 Corneal reflex	65
5.1.2 Sense of smell	65
5.1.3 Bulbar and pseudobulbar paralysis	65

5.1.4	Masseter reflex	65
5.1.5	Trigeminal neuralgia	66
5.2	Facial nerve	68
5.2.1	Anatomy	68
5.2.2	Peripheral facial nerve paresis	70
5.2.3	Central facial nerve paresis	70
5.2.4	Facial nerve spasm	71
5.2.5	Therapy	71
5.3	Brachial plexus	72
5.3.1	Traumatic damage	72
5.3.2	Damage from inflammation	75
5.3.3	Entrapment syndromes	78
5.3.4	Pancoast syndrome, radiation sequelae	80
5.4	Shoulder nerves	81
5.4.1	Long thoracic nerve	81
5.4.2	Suprascapular nerve	81
5.5	Axillary nerve	81
5.6	Musculocutaneous nerve	81
5.7	Radial nerve	83
5.8	Ulnar nerve	86
5.8.1	Ulnar groove and loge de Guyon	88
5.9	Median nerve	91
5.9.1	Carpal tunnel syndrome	91
5.10	Volkman's contracture	98
5.11	Lumbosacral plexus	98
5.11.1	Diabetic plexopathy	101
5.11.2	Gluteal nerves, injection paralysis	101
5.12	Cutaneous femoral nerve	102
5.13	Femoral nerve	103
5.14	Sciatic nerve	107
5.15	Tibial nerve	107
5.16	Peroneal nerve	108
5.17	Anterior tibial nerve syndrome	110
6	Pain from nerve, muscle, and tissue	111
6.1	Aspects of the physiology of pain	113
6.1.1	Sensitization	113
6.1.2	Nociceptors in muscles and joints	114
6.1.3	Neurogenic inflammation	115
6.1.4	Nociceptive pain	116
6.1.5	Neuropathic pain	116
6.1.6	Mixed pain concept	117
6.2	Pain and peripheral nerve lesions	120
6.2.1	First and second neuron pathways	121
6.2.2	Impulse propagation in normal nerve; the diseased nerve and cross-talk	121
6.2.3	Ectopic impulse generation and peripheral sensitization	121
6.2.4	Central sensitization and anatomical plasticity	123
6.2.5	Central sensitization and descending inhibition	124

6.2.6	Sympathetic-afferent coupling	124
6.2.7	Gate control theory	125
7	Polyneuropathy	127
7.1	Demyelinating neuropathies	129
7.1.1	Polyneuritis and polyradiculitis	130
7.2	Axonal degeneration	132
7.2.1	Neuronopathies	132
7.2.2	Axonopathies	132
7.3	Combined axon and myelin damage	133
7.4	Complex regional pain syndrome	133
7.5	Root avulsions	134
7.6	Referred pain	135
7.7	Myofascial syndrome	137
7.8	Pain states in the trunk and extremities	140
7.8.1	Cervical pain syndromes	140
7.8.2	Whiplash trauma	144
7.8.3	Paravertebral pain	146
7.8.4	Low back pain, sciatica	147
7.8.5	Intercostal neuralgia	151
7.8.6	Scapulocostal syndrome	151
7.8.7	Frozen shoulder	151
7.8.8	Brachialgia	151
7.8.9	Herpes zoster	152
8	General therapeutic guidelines	157
8.1	Nerve-muscle interaction	158
8.1.1	Electrotherapy of the muscle	158
8.1.2	Electrotherapy of the regenerating nerve	159
8.1.3	Physical therapy	160
8.1.4	Voluntary activation	160
8.1.5	Motivating the patient	161
8.2	Regeneration-promoting substances	161
8.3	Pain therapy	162
8.3.1	Non-steroidal anti-inflammatory drugs	163
8.3.2	Anticonvulsants	165
8.3.3	Antidepressants	165
8.3.4	Opioids	166
8.3.5	Neuroleptics	166
8.3.6	Miscellaneous	166
8.3.7	The mixed pain concept and its impact on pain therapy	167
	Subject Index	169
