

Table of Contents

1. Introduction. By H. Capellmann	1
1.1 Preliminary Remarks	1
1.2 Ground State and Elementary Excitations	2
1.3 Finite Temperature Properties: What Drives the Phase Transition?	4
1.3.1 The Temperature Dependence of Δ	4
1.3.2 Amplitude Fluctuations	5
1.3.3 Transverse Fluctuations	6
1.4 The Paramagnetic Phase	6
1.5 Organization of the Book	11
References	12
 2. A Unified Picture of Magnetism. By T. Moriya (With 17 Figures)	15
2.1 Background	15
2.1.1 Historical Development	15
2.1.2 Outline	17
2.2 Theory of Magnetism Based on the Band Model	18
2.2.1 The Ground State	18
2.2.2 Magnetic Excitations from the Ground State	18
2.2.3 Finite-Temperature Properties	20
2.3 Self-Consistent Renormalization Theory for the Coupled Extended Modes of Spin Fluctuations	23
2.3.1 General Discussion	23
2.3.2 Theory Above T_C	26
2.3.3 Theory Below T_C	31
2.3.4 Comparison with Experiment	33
2.3.5 Supplementary Discussions on the SCR Theory	36
2.4 A Unified Description of Magnetism – Adiabatic Approximation	38
2.4.1 General Considerations	38
2.4.2 Functional Integral Theory	40
2.4.3 Mean Mode-Mode Coupling Theory of Spin Fluctuations – An Interpolation Theory	42
2.4.4 Physical Properties in the Intermediate Regime	47
2.4.5 Supplementary Discussions	49
2.5 Dynamical Properties of Spin Fluctuations	50

2.5.1	General Remarks	50
2.5.2	Spin Waves at Low Temperatures	50
2.5.3	Spin Correlations Above T_C	51
2.5.4	Limitations of the Static Approximation	52
2.5.5	Present Status and Future Prospect of the Theory	53
2.6	Conclusion	54
	References	54
3.	3d-Metallic Magnetism and Spin-Resolved Photoemission	
	By E. Kisker (With 44 Figures)	57
3.1	Background	57
3.2	The Electronic Structure of Ferromagnets	60
3.2.1	Low-Temperature Properties (Band Model)	60
3.2.2	Models for 3d-Metallic Magnetism at Finite Temperatures	61
3.3	Concepts of Spin- and Angle-Resolved Photoemission from Ferromagnets	64
3.3.1	Models for the Photoemission Process	64
3.3.2	Experimental Methods to Test the Band Structure	65
3.3.3	Description of Spin Polarized Electrons	67
3.3.4	Surface Sensitivity	68
3.4	Apparatus for Spin- and Angle-Resolved Photoemission	69
3.4.1	Ferromagnetic Samples and Their Preparation	70
3.4.2	Light Sources and Electron Spectrometers	71
3.4.3	Spin Detection	71
3.5	The Electronic Structure of Ni and Fe at Low Temperatures ...	72
3.5.1	Photothreshold Experiments	72
3.5.2	Spin- and Angle-Resolved Photoemission at Low Temperatures	76
3.6	Resonant Photoemission and Auger Electrons	84
3.7	Secondary Electron Spin Polarization and Stoner Excitations ...	88
3.8	Finite Temperature Ferromagnetism and Photoemission	91
3.8.1	A Simple Model	92
3.8.2	Experimental Results for Fe and Ni and Their Interpretation	93
3.8.3	Photoemission from Ni	101
3.9	Concluding Remarks and Outlook	104
	References	105
4.	The Local-Band Theory. By V. Korenman (With 9 Figures)	109
4.1	Background	109
4.1.1	General Considerations	110
4.1.2	Green's Function Structure	112
4.1.3	Functional Integrals	113

4.2	Single-Particle States and Energies	116
4.2.1	The Rotated Reference Frame	116
4.2.2	Perturbation Theory	118
4.2.3	Discussion	120
4.3	Green's Functions	121
4.3.1	Formal Analysis	121
4.3.2	Limiting Cases	124
4.3.3	Fermi-Liquid Theory	127
4.3.4	Green's Function Moments	128
4.4	Green's Functions Revisited: The Rotated Frame	130
4.4.1	Formal Analysis	131
4.4.2	Approximate Evaluation	135
4.4.3	Zero-Point Effects	136
4.5	Model Analysis	138
4.5.1	Temperature-Dependent Parameters	138
4.5.2	Model Nickel Spectra	141
4.5.3	Iron Results	146
4.6	Conclusion	147
4.A	Appendix	147
	References	157
5.	Electron Correlations in Transition Metals	
	By P. Fulde, Y. Kakehashi, and G. Stollhoff (With 14 Figures)	159
5.1	Background	159
5.2	The Correlated Ground State	161
5.2.1	Physical Interpretation of Electron Correlations	162
5.2.2	Density Functional Method	165
5.2.3	Correlated Ground State Wave Function	168
5.3	Correlation Effects in Single-Particle Excitations	184
5.4	Finite Temperature Calculations	187
5.4.1	Static Approximation	188
5.4.2	Beyond the Static Approximation	190
5.5	Influence of Correlations on the Photoelectron Spectra from Inner-Core States	199
	References	203
6.	Magnetovolume Effects	
	By I.A. Campbell and G. Creuzet (With 11 Figures)	207
6.1	Physical Mechanisms	207
6.1.1	Non-Magnetic Effects	207
6.1.2	Crystal Field Effects	207
6.1.3	Local Moment Interactions	209
6.1.4	Band Mechanism	210
6.1.5	Temperature Dependence	212

6.2	Experimental Results	215
6.2.1	Properties of the d Series at Fixed Temperature	215
6.2.2	Temperature Dependence - Weakly Magnetic Systems	218
6.2.3	Thermal Variation - Systems with Strong Moments	220
6.2.4	Compounds	222
6.2.5	Heusler Alloys	223
6.2.6	Amorphous Ferromagnets	223
6.2.7	Spin Glasses	224
6.2.8	Mn Alloys	224
6.2.9	Frequency Dependence of Elastic Moduli	224
6.2.10	Intermediate Valence Systems	225
	References	225
	Additional References with Titles	229
	Subject Index	231
