Preface	vii
CHAPTER 1: BASIC CONCEPTS	1
1.1 Convection Heat Transfer	1
1.2 Important Factors in Convection Heat Transfer	1
1.3 Focal Point in Convection Heat Transfer	2
1.4 The Continuum and Thermodynamic Equilibrium Concepts	2
1.5 Fourier's Law of Conduction	3
1.6 Newton's Law of Cooling	5
1.7 The Heat Transfer Coefficient h	6
1.8 Radiation: Stefan-Boltzmann Law	8
1.9 Differential Formulation of Basic Laws	8
1.10 Mathematical Background	9
1.11 Units	12
1.12 Problem Solving Format	13
REFERENCES	17
PROBLEMS	18
CHAPTER 2: DIFFERENTIAL FORMULATION OF THE BASIC LAWS	21
2.1 Introduction	21
2.2 Flow Generation	21
2.3 Laminar vs. Turbulent Flow	22
2.4 Conservation of Mass: The Continuity Equation	22

2.4.1	Cartesian Coordinates	22
2.4.2.	Cylindrical Coordinates	24
2.4.3	Spherical Coordinates	25
2.5	Conservation of Momentum: The Navier-Stokes Equations of Motion	27
2.5.1	Cartesian Coordinates	27
2.5.2	Cylindrical Coordinates	32
2.5.3	Spherical Coordinates	33
2.6	Conservation of Energy: The Energy Equation	37
2.6.1	Formulation: Cartesian Coordinates	37
2.6.2	Simplified form of the Energy Equation	40
2.6.3	Cylindrical Coordinates	41
2.6.4	Spherical Coordinates	42
2.7	Solution to the Temperature Distribution	45
2.8	The Boussinesq Approximation	46
2.9	Boundary Conditions	48
2.10	Non-dimensional Form of the Governing Equations: Dynamic and Thermal Similarity Parameters	51
2.10.1	Dimensionless Variables	52
2.10.2	Dimensionless Form of Continuity	52
2.10.3	dimensionless Form of the Navier-Stokes Equations of Motion	53
2.10.4	Dimensionless Form of the Energy Equation	53
2.10.5	Significance of the Governing Parameters	54
2.10.6	Heat Transfer Coefficient: The Nusselt Number	55
2.11	Scale Analysis	59
	REFERENCES	61
	PROBLEMS	62
CHAPTER 3: EXACT ONE-DIMENSIONAL SOLUTIONS		69
3.1	Introduction	69
3.2	Simplification of the Governing Equations	69
3.3	Exact Solutions	71
3.3.1	Couette Flow	71
3.3.2	Poiseuille Flow	77
3.3.3	Rotating Flow	86
	REFERENCES	93
	PROBLEMS	94

CHAPTER 4: BOUNDARY LAYER FLOW: APPLICATION TO EXTERNAL FLOW	99
4.1 Introduction	99
4.2 The Boundary Layer Concept: Simplification of the Governing Equations	99
4.2.1 Qualitative Description	99
4.2.2 The Governing Equations	101
4.2.3 Mathematical Simplification	101
4.2.4 Simplification of the Momentum Equations	101
4.2.5 Simplification of the Energy Equation	109
4.3 Summary of Boundary Layer Equations for Steady Laminar Flow	114
4.4 Solutions: External Flow	115
4.4.1 Laminar Boundary Layer Flow over Semi-infinite Flat Plate: Uniform Surface Temperature	116
4.4.2 Applications: Blasius Solution, Pohlhausen's Solution, and Scaling	131
4.4.3 Laminar Boundary Layer Flow over Semi-infinite Flat Plate: Variable Surface Temperature	140
4.4.4 Laminar Boundary Layer Flow over a Wedge: Uniform Surface Temperature	143
REFERENCES	149
PROBLEMS	150
CHAPTER 5: APPROXIMATE SOLUTIONS: THE INTEGRAL METHOD	161
5.1 Introduction	161
5.2 Differential vs. Integral Formulation	161
5.3 Integral Method Approximation: Mathematical Simplification	162
5.4 Procedure	162
5.5 Accuracy of the Integral Method	163
5.6 Integral Formulation of the Basic Laws	163
5.6.1 Conservation of Mass	163
5.6.2 Conservation of Momentum	165
5.6.3 Conservation of Energy	168
5.7 Integral Solutions	170
5.7.1 Flow Field Solution: Uniform Flow over a Semi-infinite Plate	170
5.7.2 Temperature Solution and Nusselt Number: Flow over a Semi-infinite Plate	173

5.7.3 Uniform Surface Flux	185
REFERENCES	193
PROBLEMS	194
CHAPTER 6: HEAT TRANSFER IN CHANNEL FLOW	203
6.1 Introduction	203
6.2 Hydrodynamic and Thermal Regions: General Features	204
6.2.1 Flow Field	205
6.2.2 Temperature Field	205
6.3 Hydrodynamic and Thermal Entrance Lengths	206
6.3.1 Scale Analysis	206
6.3.2 Analytic and Numerical Solutions: Laminar Flow	207
6.4 Channels with Uniform Surface Heat Flux	212
6.5 Channels with Uniform Surface Temperature	218
6.6 Determination of Heat Transfer Coefficient $h(x)$ and Nusselt Number Nu_D	224
6.6.1 Scale Analysis	224
6.6.2 Basic Considerations for the Analytical Determination of Heat Flux, Heat Transfer Coefficient and Nusselt Number	226
6.7 Heat Transfer Coefficient in the Fully Developed Temperature Region	229
6.7.1 Definition of Fully Developed Temperature Profile	229
6.7.2 Heat Transfer Coefficient and Nusselt Number	230
6.7.3 Fully Developed Region for Tubes at Uniform Surface Flux	231
6.7.4 Fully Developed Region for Tubes at Uniform Surface Temperature	236
6.7.5 Nusselt Number for Laminar Fully Developed Velocity and Temperature in Channels of Various Cross-Sections	237
6.8 Thermal Entrance Region: Laminar Flow Through Tubes	242
6.8.1 Uniform Surface Temperature: Graetz Solution	242
6.8.2 Uniform Surface Heat Flux	252
REFERENCES	254
PROBLEMS	255
CHAPTER 7: FREE CONVECTION	259
7.1 Introduction	259
7.2 Features and Parameters of Free Convection	259
7.3 Governing Equations	261

7.3.1	Boundary Conditions	262
7.4	Laminar Free Convection over a Vertical Plate: Uniform Surface Temperature	263
7.4.1	Assumptions	263
7.4.2	Governing Equations	263
7.4.3	Boundary Conditions	264
7.4.4	Similarity Transformation	264
7.4.5	Solution	267
7.4.6	Heat Transfer Coefficient and Nusselt Number	267
7.5	Laminar Free Convection over a Vertical Plate: Uniform Surface Heat Flux	274
7.6	Inclined Plates	279
7.7	Integral Method	279
7.7.1	Integral Formulation of Conservation of Momentum	279
7.7.2	Integral Formulation of Conservation of Energy	282
7.7.3	Integral Solution	283
7.7.4	Comparison with Exact Solution for Nusselt Number	288
	REFERENCES	289
	PROBLEMS	290
	CHAPTER 8: CONVECTION IN EXTERNAL TURBULENT FLOW	293
8.1	Introduction	293
8.1.1	Examples of Turbulent Flows	294
8.1.2	The Reynolds Number and the Onset of Turbulence	296
8.1.3	Eddies and Vorticity	297
8.1.4	Scales of Turbulence	299
8.1.5	Characteristics of Turbulence	302
8.1.6	Analytical Approach	302
8.2	Conservation Equations for Turbulent Flow	304
8.2.1	Reynolds Decomposition	304
8.2.2	Conservation of Mass	307
8.2.3	Momentum Equations	308
8.2.4	Energy Equation	310
8.2.5	Summary of Governing Equations for Turbulent Flow	310
8.3	Analysis of External Turbulent Flow	311
8.3.1	Turbulent Boundary Layer Equations	311
8.3.2	Reynolds Stress and Heat Flux	314
8.3.3	The Closure Problem of Turbulence	315
8.3.4	Eddy Diffusivity	317

8.4	Momentum Transfer in External Turbulent Flow	318
8.4.1	Modeling Eddy Diffusivity: Prandtl's Mixing Length Theory	318
8.4.2	Universal Turbulent Velocity Profile	320
8.4.3	Approximate Solution for Momentum Transfer: Momentum Integral Method	328
8.4.4	Effect of Surface Roughness on Friction Factor	334
8.5	Energy Transfer in External Turbulent Flow	335
8.5.1	Momentum and Heat Transfer Analogies	336
8.5.2	Validity of Analogies	344
8.5.3	Universal Turbulent Temperature Profile	345
8.5.4	Algebraic Method for Heat Transfer Coefficient	349
8.5.5	Integral Method for Heat Transfer Coefficient	351
8.5.6	Effect of Surface roughness on Heat Transfer	352
	REFERENCES	353
	PROBLEMS	356

CHAPTER 9: CONVECTION IN TURBULENT CHANNEL FLOW **361**

9.1	Introduction	361
9.2	Entry Length	361
9.3	Governing Equations	362
9.3.1	Conservation Equations	362
9.3.2	Apparent Shear Stress and Heat Transfer	363
9.3.3	Mean Velocity and Temperature	363
9.4	Universal Velocity Profile	364
9.4.1	Results from Flat Plate Flow	364
9.4.2	Development in Cylindrical Coordinates	365
9.4.3	Velocity Profile for the Entire Pipe	366
9.5	Friction Factor for Pipe Flow	367
9.5.1	Blasius Correlation for Smooth Pipe	367
9.5.2	The $1/7^{\text{th}}$ Power Law Velocity Profile	367
9.5.3	Prandtl's Law for Smooth Pipe	369
9.5.4	Effect of Surface Roughness	371
9.6	Momentum-Heat Transfer Analogies	372
9.6.1	Reynolds Analogy for Pipe Flow	374
9.6.2	Adapting Flat-Plate Analogies to Pipe Flow	374
9.6.3	Other Analogy-Based Correlations	376
9.7	Algebraic Method Using Universal Temperature Profile	377
9.8	Other Correlations for Smooth Pipe	379
9.9	Heat Transfer in Rough Pipes	380

REFERENCES	381
PROBLEMS	382
CHAPTER 10: CORRELATION EQUATIONS: FORCED AND FREE CONVECTION	387
10.1 Introduction	387
10.2 Experimental Determination of Heat Transfer Coefficient h	388
10.3 Limitations and Accuracy of Correlation Equations	389
10.4 Procedure for Selecting and Applying Correlation Equations	389
10.5 External Forced Convection Correlations	390
10.5.1 Uniform Flow over a Flat Plate: Transition to Turbulent Flow	390
10.5.2 External Flow Normal to a Cylinder	396
10.5.3 External Flow over a Sphere	397
10.6 Internal Forced Convection Correlations	397
10.6.1 Entrance Region: Laminar Flow Through Tubes at Uniform Surface Temperature	397
10.6.2 Fully Developed Velocity and Temperature in Tubes: Turbulent Flow	403
10.6.3 Non-circular Channels: Turbulent Flow	404
10.7 Free Convection Correlations	405
10.7.1 External Free Convection Correlations	405
10.7.2 Free Convection in Enclosures	413
10.8 Other Correlations	422
REFERENCES	423
PROBLEMS	425
CHAPTER 11: CONVECTION IN MICROCHANNELS	437
11.1 Introduction	437
11.1.1 Continuum and Thermodynamic Hypothesis	437
11.1.2 Surface Forces	437
11.1.3 Chapter Scope	439
11.2 Basic Considerations	439
11.2.1 Mean Free Path	439
11.2.2 Why Microchannels?	440
11.2.3 Classification	441
11.2.4 Macro and Microchannels	442
11.2.5 Gases vs. Liquids	442
11.3 General Features	442
11.3.1 Flow Rate	444
11.3.2 Friction Factor	444

11.3.3	Transition to Turbulent Flow	446
11.3.4	Nusselt number	446
11.4	Governing Equations	446
11.4.1	Compressibility	447
11.4.2	Axial Conduction	447
11.4.3	Dissipation	447
11.5	Velocity Slip and Temperature Jump Boundary Conditions	448
11.6	Analytic Solutions: Slip Flow	450
11.6.1	Assumptions	450
11.6.2	Couette Flow with Viscous Dissipation: Parallel Plates with Surface Convection	450
11.6.3	Fully Developed Poiseuille Channel Flow: Uniform Surface Flux	450
11.6.4	Fully Developed Poiseuille Channel Flow: Uniform Surface Temperature	450
11.6.5	Fully Developed Poiseuille Flow in Microtubes: Uniform Surface Flux	485
11.6.6	Fully Developed Poiseuille Flow in Microtubes: Uniform Surface Temperature	496
	REFERENCES	498
	PROBLEMS	500
APPENDIX A	Conservation of Energy: The Energy Equation	507
APPENDIX B	Pohlhausen's Solution	516
APPENDIX C	Laminar Boundary Layer Flow over Semi- infinite Plate: Variable Surface Temperature	520
APPENDIX D	The von Karman Momentum and Heat Transfer Analogy	523
APPENDIX E	Turbulent Heat Transfer from a Flat Plate with Unheated Starting Length	527
APPENDIX F	Properties of Dry Air at Atmospheric Pressure	536
APPENDIX G	Properties of Saturated Water	537
