1. *Introduction.* By M.B. Salamon 1
References 4

2. *Structure and Its Influence on Superionic Conduction: EXAFS Studies*
By J.B. Boyce and T.M. Hayes (With 17 Figures) 5

2.1 Technique of EXAFS 6

2.1.1 Theory 6

2.1.2 Experiment 9

2.1.3 Data Reduction and Analysis 10

2.1.4 Contrast with Diffraction Studies 14

2.2 Structural Considerations for Superionic Conduction 17

2.2.1 General Considerations 17

2.2.2 Pair Potentials 18

2.2.3 Anharmonic Model 19

2.2.4 Excluded Volume Model and Cation-Anion Correlations 21

2.3 EXAFS Investigations of bcc Superionic Conductors: AgI 22

2.3.1 Early Structural Studies 23

2.3.2 EXAFS Study 24

2.3.3 Other Recent Structural Studies 30

2.3.4 Structural Model for Superionic Conduction in bcc Conductors 31

2.4 EXAFS Investigations of fcc Superionic Conductors: Cuprous Halides .. 33

2.4.1 CuI Structural Studies 34

2.4.2 EXAFS and Structural Models for CuI 35

2.4.3 CuBr 39

2.4.4 CuCl 40

2.4.5 Discussion 41

2.5 Summary 42

References 42

3. <i>Neutron Scattering Studies of Superionic Conductors</i>	
By S.M. Shapiro and F. Reidinger (With 22 Figures)	45
3.1 Neutron Scattering	46
3.1.1 Scattering Function	46
3.1.2 Elastic Scattering	47
3.1.3 Inelastic Scattering	49
3.2 Structural Studies	51
3.2.1 AgI	51
3.2.2 Fluorites	56
3.2.3 β -Alumina	59
3.3 Inelastic Studies	62
3.3.1 AgI	62
3.3.2 RbAg_4I_5	65
3.3.3 Fluorites	66
3.3.4 β -Alumina	69
3.4 Conclusions	73
References	74
4. <i>Statics and Dynamics of Lattice Gas Models</i>	
By H.U. Beyeler, P. Brüesch, L. Pietronero, W.R. Schneider, S. Strässler, and H.R. Zeller (With 8 Figures)	77
4.1 General Theory of the Lattice Gas Model	
for Superionic Conductors	79
4.1.1 Definition of the Lattice Gas Model	79
4.1.2 Liouvillian Approach to Lattice Gas Dynamics	81
4.1.3 Master-Equation Approximation	83
4.1.4 High-Frequency Limit	85
4.1.5 Extension to All Frequencies	87
4.2 Extended Dynamical Theory	88
4.2.1 τ_{trap} and Its Relation to a Soliton Model	88
4.2.2 Low-Frequency Conductivity	91
4.3 Applications to Silver Iodide and Hollandite	92
4.3.1 Silver Iodide: Structural Properties, Lattice Gas Representation	92
4.3.2 The Disorder Entropy of AgI	93
4.3.3 Dynamic Properties of α -AgI	95
4.3.4 Collective Excitations in One-Dimensional Systems: Hollandite	102
4.4 Conclusions	104
Appendix A	106
Appendix B	108
Appendix C	108
References	109

5. *Light Scattering in Superionic Conductors*

By M.J. Delaney and S. Ushioda (With 10 Figures)	111
5.1 Raman Scattering	114
5.1.1 Silver Iodide	115
5.1.2 $M^+Ag_4I_5$ ($M^+ = Rb^+, K^+, NH_4^+$)	120
5.1.3 Copper Halides	123
5.1.4 β -Aluminas	124
5.1.5 Anion Conducting Fluorites	127
5.2 Low-Frequency Raman and Brillouin Scattering	128
5.2.1 Theoretical Considerations	128
5.2.2 Silver Halides	131
5.2.3 Other Superionic Conductors	133
5.3 Infrared Absorption and Frequency Dependent Conductivity	134
5.4 Conclusion	136
References	137

6. *Magnetic Resonance in Superionic Conductors*

By P.M. Richards (With 10 Figures)	141
6.1 Theory of NMR Relaxation of and by Rapidly Diffusing Ions	144
6.1.1 General Correlation Functions and Interactions	144
6.1.2 Calculation of T_1 and T_2 from Correlation Functions	149
6.1.3 T_1/T_2 Ratio	151
6.1.4 Simple Random-Walk Values	153
6.1.5 Diffusion in Lower Dimensions	154
6.1.6 Effects of Correlated Hopping	155
6.2 Comparison with Experiment	157
6.2.1 Thermal Activation	157
6.2.2 Frequency Dependence	159
6.2.3 Prefactors	161
6.2.4 Coupling to Paramagnetic Impurities	165
6.3 Electron Paramagnetic Resonance	167
6.4 Structure Determination	170
6.5 Summary and Conclusions	171
References	173

7. *Phase Transitions in Ionic Conductors*. By M.B. Salamon (With 12 Figures)

7.1 Modern Theory of Phase Transitions	177
7.1.1 Landau Criteria	179
7.1.2 Renormalization Group	180
7.2 Models for Critical Behavior in Superionic Conductors	181
7.2.1 Quasi-Chemical Models	181

7.2.2	Lattice Gas Models	183
7.2.3	The Order Parameter for RbAg_4I_5	185
7.3	Critical Behavior of Physical Properties	189
7.3.1	Specific Heat	189
7.3.2	Ionic Conductivity	191
7.3.3	Acoustic Properties	194
7.3.4	Other Properties	196
7.4	Conclusions	198
	References	198
