Work Function of Metals

By *J. Hölzl* and *F.K. Schulte*. With 67 Figures

1. Introduction	1
2. Theory	2
2.1 Definition of the Work Function	4
2.2 Work Function of Pure Metals with Clean Surfaces	6
2.2.1 Qualitative Discussion of Potentials and Energies	
Near a Metal Surface	6
2.2.2 Density-Functional Formalism and Work Function	10
2.2.3 Bulk and Surface Part of the Work Function	14
2.2.4 Uniform-Background Model and Its Extensions	18
a) Lang-Kohn Theory	18
b) Extensions of the Lang-Kohn Theory	21
c) Thin Metal Films	23
d) Qualitative Discussion of the Anisotropy of the	
Work Function	24
2.2.5 Wave-Mechanical Calculations for Lattice Potentials	26
2.3 Work Function Changes Induced by Adsorbates on Pure Metals	29
2.3.1 Classical Model	29
2.3.2 Quantum-Mechanical Model	30
2.3.3 Newns-Anderson Formalism	33
2.3.4 Applications of the Newns-Anderson Formalism	34
a) Adatom Energy Level Shift	34
b) Results and Discussion	35
2.3.5 Tight-Binding Approximation	37
2.3.6 Applications of the Density-Functional Formalism	38
a) A Single Adatom	38
b) Representation of the Adsorbate Layer by a Charge Slab	39
2.4 Work Function of Alloys	42

3. Experimental Procedures	45
3.1 Survey of Experimental Methods	45
3.2 Absolute Methods	45
3.2.1 Thermionic Emission	45
3.2.2 Photoelectric Method	49
3.2.3 Field Emission	50
3.3 Relative Methods	51
3.3.1 Diode Methods and Examples for Practical Configuration	52
3.3.2 Condenser Methods	58
a) Vibrating Capacitor Methods	59
b) Systematic Sources of Error	61
c) Detection System	62
d) Form of the Kelvin Method in Practice	63
e) Other Condenser Methods	67
4. Work Function of Pure Metals with Clean Surfaces	68
4.1 Summary of Theoretical Models Used for the Calculation of the Work Function of Pure Metals with Clean Surfaces	69
4.1.1 Empirical and Semiempirical Studies	69
4.1.2 Outline of Quantum-Mechanical Treatments	72
4.2 Preparational Procedures	73
4.3 Temperature Effects on the Work Function	77
4.4 Mechanical Stress Dependence of Work Function	80
4.5 Compilation of Work Function Data on Pure Metals	85
5. Work Function Changes Induced by Adsorbates on Pure Metals	85
5.1 Work Function as a Measure of Coverage	96
5.1.1 Calibration Methods	96
5.1.2 Use of the Work Function as a Measure of Coverage	98
a) Thermodynamics	99
b) Surface Kinetics	100
c) Surface Diffusion	102
5.2 Work Function and Representative Surface Data of Adsorbate Systems ..	104
5.2.1 Static Substrate Model	104
a) Theoretical Relationships and Basic Adsorption Experiments	104
b) Experiments Relating to Gurney's "Depolarization Model" ...	109
c) Dependence of $\Delta\phi(\theta)$ on the Structure of the Substrate Surface	112
5.2.2 Dynamic Substrate Model	113
5.3 Compilation of Ad-Systems Connected with Work Function Studies	116

6. Work Function of Alloys	126
6.1 Summary of Theoretical Treatments of Alloy Systems	126
6.2 Preparational Procedure and Usefulness of Concentration Graphs	127
6.3 Work Function and Surface Composition of Alloys	130
6.4 Work Function and Other Alloy Characteristics	133
6.4.1 Work Function and Bulk/Surface Properties	133
6.4.2 Use of Work Function Measurement for Obtaining Thin Alloy Film Diffusion Parameters	136

Physical and Chemical Properties of Stepped Surfaces

By *H. Wagner*. With 35 Figures

1. Introduction	151
2. Characterization of Stepped Surfaces	153
2.1 Surface Crystallography	153
2.2 Experimental Evidence for Step Structures	156
2.2.1 Field Ion Microscopy	157
2.2.2 Low Energy Electron Diffraction (LEED)	159
2.2.3 LEED from Stepped Surfaces	161
2.2.4 Electron Microscopy	168
3. Properties of Clean Stepped Surfaces	169
3.1 Structural Properties	169
3.2 Thermal Stability of Step Structures	173
3.2.1 Experimental Observations	173
3.2.2 Theoretical Considerations	175
3.3 Electronic Properties	182
3.3.1 Work Function	182
3.3.2 Surface States	188
4. Interaction of Atoms and Molecules with Stepped Surfaces	190
4.1 Adsorption Kinetics	191
4.2 Adsorption States	196
4.3 Adsorbate Structures	200
4.4 Catalytic Reactions	202
4.5 Atom and Molecule Scattering from Stepped Surfaces	209
4.6 Surface Diffusion	213
5. Conclusions	217
