

## Table of Contents

### Shell Structures

|                                                                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Different methods of numerical analysis of shells<br><i>W.C. Schnobrich</i> .....                                                                                                                   | 1   |
| Some finite element methods for linear thin shell problems<br><i>M. Bernadou</i> .....                                                                                                              | 18  |
| Computer aided design of shell structures<br><i>H. Sardar Amin Saleh</i> .....                                                                                                                      | 29  |
| Direct integration of elastic thin shallow shell's governing equations and lower order method<br><i>Fan Jashen</i> .....                                                                            | 38  |
| Applications of axisymmetric thin shell finite elements to the analysis of a radiating flexural shell sonar transducer<br><i>B. Hamonic, J.C. Debus, J.N. Decarpigny, D. Boucher, B. Tocquet</i> .. | 43  |
| Finite element analysis of cylindrical shells under concentrated loading<br><i>P.L. Gould, M. Hourani, J.S. Lin, T.G. Harmon, K.J. Han</i> .....                                                    | 54  |
| A curved stiffener element for shell structures of general geometry<br><i>S.-C. Chang, J.H. Lee</i> .....                                                                                           | 64  |
| Membrane stresses in hyperbolic paraboloid sectorial shell with cantilevered free edge<br><i>I. Sajtos</i> .....                                                                                    | 75  |
| Approximate analysis of saddle Cable Net Roofs<br><i>Ding Shen-Si</i> .....                                                                                                                         | 91  |
| Solutions of the equations of the unified approach in the analysis of wall beams, plates, arches and shells<br><i>P. Hernandez, E. Ramirez, J. Soler</i> .....                                      | 101 |
| Bond slip equations of reinforced concrete shells<br><i>M. Kurata</i> .....                                                                                                                         | 111 |

### Spatial Structures

|                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------|-----|
| Analysis methods for spatial structures<br><i>M. Papadrakakis</i> .....                                        | 121 |
| Analysis of large scale space frames by minimization of total potential energy<br><i>H. Tabar-Heydar</i> ..... | 149 |

## VI

|                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Influence of Boundary conditions upon stress distribution<br>in single-layer diagonal grids<br><i>Ł.S. Makowski, D. Maranzano, G.A.R. Parke</i> .....      | 159 |
| Extensible cable network analysis through a nonlinear<br>optimization code<br><i>J.P. Coyette, P. Guisset</i> .....                                        | 173 |
| Practical formex analysis of space structures<br><i>H. Nooshin, P.G. King</i> .....                                                                        | 185 |
| Traglast und Formänderung von Raumfachwerkplatten in<br>anschaulicher Näherung<br><i>M. Herzog</i> .....                                                   | 200 |
| <br><b>Dynamic analysis</b>                                                                                                                                |     |
| Practical dynamic analysis of translational shells<br><i>A. Samartin, J. Martinez</i> .....                                                                | 208 |
| Dynamic experiments and earthquake observation of reticulated<br>single-layer domes<br><i>T. Tanami, Y. Hangai</i> .....                                   | 221 |
| Atmospheric turbulence and its consequences on the dynamic<br>behaviour of shell structures<br><i>J. Monbaliu</i> .....                                    | 231 |
| Numerical analysis of concrete pedestal of antenna building<br>at Lessive, Belgium<br><i>D. Van Gemert, C. Vanoverschelde, P. Wouters, J. Decock</i> ..... | 241 |
| On the nonlinear behaviour of R/C frame structures under<br>seismic loads<br><i>W.B. Kratzig, K. Meskouris</i> .....                                       | 251 |
| Dynamic analysis of liquid filled tanks including plasticity<br>and fluid interaction - Earthquake effects<br><i>J. Eibl, L. Stempniewski</i> .....        | 261 |
| Static and dynamic analysis of tensegrity systems<br><i>R. Motro, S. Najari, P. Jouanna</i> .....                                                          | 270 |
| <br><b>Non-linear analysis</b>                                                                                                                             |     |
| Stability of thin-walled beams. A general theory<br><i>Y.B. Yang</i> .....                                                                                 | 280 |
| Geometrically and physically non-linear analysis of plane<br>frames sensitive to imperfections<br><i>M.A. Gizejowski</i> .....                             | 290 |
| Numerical analysis in the vicinity of critical points by the<br>generalized inverse<br><i>Y. Hangai</i> .....                                              | 299 |

|                                                                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Nonlinear computation of a barrel vault<br><i>M. Van Laetham, J. De Coen</i> .....                                                                                       | 306 |
| A finite element model for the nonlinear analysis of reinforced concrete shell structures<br><i>M. Cervera, A.J. Kent, E. Hinton</i> .....                               | 315 |
| The behaviour of a steel cylinder under the influence of a local load in the elastic and elasto-plastic area<br><i>J. Spiekhout, A.M. Gresnigt, G.M.A. Kusters</i> ..... | 329 |
| Large displacement analysis of thin shells<br><i>S. Jingju, A. Peterson, H. Petersson</i> .....                                                                          | 337 |
| Nonlinear analysis of tension fabric structure<br><i>A. Yoshida, S. Ban, H. Tsubota, K. Kurihara</i> .....                                                               | 350 |
| Non linear analysis with model investigation of buried pipelines<br><i>D.H. Jiang, M.C. Chang, C.J. Hsiao, C.C. Lee, Y.F. Lee, W.P. Lin</i> .....                        | 360 |
| An unconventional class of elements for nonlinear shell analysis<br><i>M.K. Nygård, P.G. Bergan</i> .....                                                                | 369 |
| Shakedown and limit analysis of shells - A variational and numerical approach<br><i>P. Morelle, G. Fonder</i> .....                                                      | 381 |
| Displacement fields and large deformation analysis of 3-D beams<br><i>G. Ying Qiao, J.L. Batoz</i> .....                                                                 | 406 |
| <br>Presentation and interpretation of results                                                                                                                           |     |
| An algorithm for graphical computer results in shells<br><i>A. Samartin, J. Cardona</i> .....                                                                            | 418 |
| Analysis of shell structures on microcomputers<br><i>J.P. Rammant, E. Backx, L. Knoops</i> .....                                                                         | 425 |
| Using microcomputers for the interactive generating of spatial meshes and results evaluation<br><i>J.F. Stelzer</i> .....                                                | 435 |
| The use of a CAD-system for pre- and postprocessing of finite element calculations<br><i>G. De Roeck, C. Vanoverschelde</i> .....                                        | 445 |
| Mathematical model for calculation of rebuild of R/C mushroom slab<br><i>D. Van Gemert, C. Vanoverschelde, M. Vanden Bosch</i> .....                                     | 454 |
| Design and analysis of the Winter Garden in New York City<br><i>P. Lew, A. Gutman, L. Zborovsky, L. Petrella</i> .....                                                   | 460 |
| Experimental and numerical verification of the structural behaviour of a foamed hyperbolic paraboloid shell<br><i>G. De Roeck, C. Vanoverschelde</i> .....               | 467 |
| Numerical analysis of tensile structures with minimum surface based on survey of soap film models<br><i>G. Valente, M. Moschetti</i> .....                               | 478 |
