

CONTENTS

I - Numerical Analysis

a - General theory.

A.Bourgeade, Ph.Le Floch, P.A.Raviart: Approximate solution of the generalized Riemann problem and applications.	1
B.Engquist: Computation of oscillatory solutions to partial differential equations.	10
A.Harten: Preliminary results on the extension of ENO schemes to two-dimensional problems.	23
P.L.Roe: Upwind differencing schemes for hyperbolic conservation laws with source terms.	41
E.Tadmor: The entropy dissipation by numerical viscosity in nonlinear conservative difference schemes.	52

b - Main applications.

V.Billey, J.Periaux, P.Perrier, B.Stoufflet: 2-D and 3-D Euler computations with finite element methods in aerodynamics.	64
J-J.Chattot, S.Malet: A "box-scheme" for the Euler equations.	82
J-F.Colombeau, A-Y.Leroux: Numerical techniques in elastoplasticity.	103
V.Daru, A.Lerat: An implicit centered scheme which gives non-oscillatory steady shocks.	115
Y-I.Shokin: A computer aided system for investigation and construction of difference schemes of gas dynamics.	128

II - Hyperbolic P.D.E. theory

a - Surveys, open questions.

S.K.Godunov: Lois de conservation et intégrales d'énergie des équations hyperboliques.	135
P.D.Lax: On symmetrizing hyperbolic differential equations.	150
B-L.Keyfitz: A survey of nonstrictly hyperbolic conservation laws.	152
M.Slemrod: Admissibility criteria for phase boundaries.	163
D.H.Wagner: The transformation from Eulerian to Lagrangian coordinates for solutions with discontinuities.	172

b - Existence theory.

D.Hoff: Two existence theorems for systems of conservation laws with dissipation.	181
--	-----

Li Ta Tsien: Global solutions for some free boundary value problems for quasilinear hyperbolic systems and applications.	195
M.Rascle: Un théorème d'existence globale en élasticité non linéaire mono-dimensionnelle.	210
Wang Jing Hua: A nonhomogeneous system of equations of nonisentropic gas dynamics.	221

c - Qualitative properties of solutions.

B.Gustafsson: Far field boundary conditions for steady state solutions to hyperbolic systems.	238
M.Schatzman: Can hyperbolic systems of conservation laws be well-posed in BV?	253
D.Serre: Propagation des oscillations dans les systèmes hyperboliques non linéaires.	265
B.Temple: Stability and decay in systems of conservation laws.	286

III - Miscellaneous problems

C.Bardos: Different approaches for the relations between the kinetic and the macroscopic equations.	308
J.M.Greenberg: Integral transport processes.	324
