

# Contents

Introduction	1
<b>Chapter 1. Preliminaries</b>	<b>5</b>
1. Convention and Notation	5
2. Algebra	7
2.1. Algebraic independence	7
2.2. Rank, term-rank and generic-rank	7
3. Graph	9
3.1. Directed graph	9
3.2. Bipartite graph	9
3.3. Network	13
4. Matroid	16
4.1. Basic concepts	16
4.2. Examples	20
4.3. Linking system	21
4.4. Decomposition principle for submodular functions	22
4.5. Independent-flow problem	24
<b>Chapter 2. Graph-Theoretic Approach to the Solvability     of a System of Equations</b>	<b>28</b>
5. Structural Solvability of a System of Equations	28
5.1. Introductory comments	28
5.2. Formulation of structural solvability	29
6. Representation Graph	33
7. Graphical Conditions for Structural Solvability	36
7.1. Generality of elements	36
7.2. Graphical conditions	36
8. Decompositions of a Graph by Menger-type Linkings	41
8.1. L-decomposition	41
8.2. Decomposition of a network by minimum cuts	42
8.3. M-decomposition	44
8.4. Relation among various decompositions	51
9. Decompositions and Reductions of a System of Equations	56
9.1. Problem decomposition by the L-decomposition	56
9.2. Problem decomposition by the M-decomposition	57
9.3. Cycles on the representation graph	61

9.4. Decomposition of inconsistent parts	65
9.5. Amount of numerical computation	69
10. Application of the Graphical Technique	73
11. Examples	77
<b>Chapter 3. Graph-Theoretic Approach to the Controllability of a Dynamical System</b>	<b>85</b>
12. Descriptions of a Dynamical System	85
13. Controllability of a Dynamical System	92
13.1. Controllability of a system in standard form	92
13.2. Controllability of a system in descriptor form	93
13.3. Necessary conditions for the controllability	96
14. Graphical Conditions for Structural Controllability	99
14.1. Structural controllability	99
14.2. Structural controllability of a descriptor system	102
14.3. Structural controllability of a system in extended form	109
15. Discussions	113
15.1. Dynamic graph	113
15.2. Combinatorial analogue of Kalman's canonical decomposition	116
15.3. Greatest common divisor of minors of modal controllability matrix	120
<b>Chapter 4. Physical Observations for Faithful Formulations</b>	<b>122</b>
16. Mixed Matrix for Modeling Two Kinds of Numbers	122
16.1. Two kinds of numbers	122
16.2. Generality assumptions	129
16.3. Mixed matrix	132
17. Algebraic Implication of Dimensional Consistency	136
17.1. Introductory comments	136
17.2. Dimensioned matrix	136
17.3. Total unimodularity of a dimensioned matrix	139
18. Physical Matrix	142
18.1. Physical matrix	142
18.2. Physical matrices in a dynamical system	144
<b>Chapter 5. Matroid-Theoretic Approach to the Solvability of a System of Equations</b>	<b>149</b>
19. Rank of a Mixed Matrix	149
19.1. Rank Identity for a mixed matrix	149

19.2. Rank Identity in matroid-theoretic terms	151
19.3. Another identity	152
20. Algorithm for Computing the Rank of a Mixed Matrix . . . . .	154
20.1. Algorithm for the rank of a layered mixed matrix	154
20.2. Algorithm for the rank of a mixed matrix	159
21. Matroidal Conditions for Structural Solvability . . . . .	169
22. Combinatorial Canonical Form of a Layered Mixed Matrix . . .	174
23. Relation to Other Decompositions . . . . .	182
23.1. Introductory comments	182
23.2. Decomposition by $L(p_i)$ and the DM-decomposition	182
23.3. Decomposition for electrical networks with admittance expression	191
23.4. Extensions and remarks	194
24. Block-Triangularization of a Mixed Matrix . . . . .	196
24.1. LU-decomposition of an invertible mixed matrix	196
24.2. Block-triangularization of a general mixed matrix	205
25. Decomposition of a System of Equations . . . . .	213
26. Miscellaneous Notes . . . . .	220
26.1. Eigenvalues of a mixed matrix	220
26.2. Hybrid immittance matrix of multiports	221
<b>Chapter 6. Matroid-Theoretic Approach to the Controllability of a Dynamical System</b>	<b>225</b>
27. Dynamical Degree of a Dynamical System . . . . .	225
27.1. Introductory comments	225
27.2. Dynamical degree of a descriptor system	226
27.3. An algorithm for determining the dynamical degree	230
28. Matroidal Conditions for Structural Controllability . . . . .	233
29. Algorithm for Testing the Structural Controllability . . . . .	241
30. Examples . . . . .	245
31. Discussions . . . . .	252
31.1. Relation to other formulations	252
31.2. Greatest common divisor of minors of modal controllability matrix	257
<b>Conclusion</b>	<b>261</b>
