FOREWORD	
ACKNOWLEDGMENTS	
INTRODUCTION	

PART ONE: Denotational Constructors

1. Introduction	1
2. Fixed-point equations and the theory of cpo's	2
3. Binary relations	12
4. Functions	19
5. The definitions of functions with formal parameters	27
6. Tuples, strings and Cartesian operations	36
7. Formal languages	40
8. Domains	43
9. Three-valued predicates	49
10. Input-output correctness statements	66
11. Bibliographic remarks	77
12. Exercises	80

PART TWO: An Example Definition of a Subset of Pascal

1. Introduction	83
2. An informal description of our subset of Pascal	89
3. Abstract syntax	90
4. Semantic domains	93
4.1 Static domains	93
4.2 Dynamic domains	94
4.3 The algebra of data	95
5. Well-formed states	98
5.1 Auxiliary functions	99
5.2 Well-formedness predicates	100
6. Denotations	106
6.1 Programs	107
6.2 Type expressions	108
6.3 Type definitions	110
6.4 Variable declarations	112
6.5 The correctness properties of type definitions and variable declarations	114
6.6 Expressions	119
6.6.1 The type of an expression	119
6.6.2 Left expressions	121
6.6.3 Right expressions	122
6.7 The type-correctness of expressions	123
6.8 Commands	125
6.9 The correctness properties of commands	129
7. The derivation of program-correctness proof rules	131
