Preface *xiii*

1	Introduction to the Chemistry of Donor–Acceptor Cyclopropanes: A Historical and Personal Perspective	1
	<i>Hans-Ulrich Reissig</i>	
1.1	Introduction	1
1.2	My Personal Entry to Donor–Acceptor Cyclopropanes	3
1.3	A Few Principles of the Chemistry of Donor–Acceptor Cyclopropanes	6
1.4	Remarks Regarding the Terminology Applied to the Use of Donor–Acceptor Cyclopropanes	10
1.5	Conclusions	12
	Abbreviations	12
	References	13
2	Understanding the Reactivity of Donor–Acceptor Cyclopropanes: Structural and Electronic Analysis	15
	<i>Anu Jacob, Gwyndaf A. Oliver, and Daniel B. Werz</i>	
2.1	Introduction	15
2.2	Activated Cyclopropanes	17
2.3	Donor–Acceptor Cyclopropanes (DACs)	19
2.4	Computational and Kinetic Investigations	22
2.5	Concluding Remarks	32
	References	32
3	Cycloaddition and Annulation Reactions of Donor–Acceptor Cyclopropanes	37
	<i>Roman A. Novikov, Denis D. Borisov, and Yuri V. Tomilov</i>	
3.1	Introduction	37
3.2	Formal [3+2]-Cycloaddition with Carbon–Carbon Multiple Bonds	39
3.2.1	General Aspects	39
3.2.2	Formal [3+2]-Cycloaddition with C=C Double Bond	40
3.2.3	Formal [3+2]-Cycloaddition with Triple C≡C Bond	50

3.2.4	[3+2]-Annulation with Aromatic C=C Bond	53
3.2.5	[3+2]-Annulation of D-A Cyclopropanes Involving Aryl/Heteroaryl Donor Substituent	57
3.3	Formal [3+2]-Cycloaddition with C=O and C=N Double Bond	59
3.3.1	Formal [3+2]-Cycloaddition with C=O Double Bond	59
3.3.2	Formal [3+2]-Cycloaddition with C=N Double Bond	66
3.4	Formal [3+2]-Cycloaddition with Other Heteroatom X=Y Double Bonds	73
3.4.1	Formal [3+2]-Cycloaddition with Cumulenes and Heterocumulenes	73
3.4.2	Formal [3+2]-Cycloaddition with SCN and SeCN	76
3.4.3	Formal [3+2]-Cycloaddition with C=S and C=Se Double Bonds	77
3.4.4	Formal [3+2]-Cycloaddition with N=O and N=N Double Bonds	78
3.4.5	Formal [3+2]-Cycloaddition with C≡N Triple Bonds in Nitriles	80
3.4.6	Formal [3+2]-Cycloaddition and Other Reactions with Three-Membered Heterocycles	80
3.5	Formal [3+3]-Cycloaddition and Annulation Reactions of D-A Cyclopropanes	83
3.5.1	General Aspects	83
3.5.2	[3+3]-Annulation with Aromatic Substrates as 1,3-Synthons	84
3.5.3	[3+3]-Annulation with Allenes, Allyl, and Propargyl Derivatives	87
3.5.4	[3+3]-Annulation with Mercaptoacetaldehyde	88
3.5.5	[3+3]-Cycloaddition with Nitrones and Nitronates	89
3.5.6	[3+3]-Annulation/Cycloaddition with Dinitrogen Substrates	93
3.5.7	Formal [3+3]-Cycloaddition with Azides and Diazo Compounds	94
3.6	Reactions of Formal [4+3]-Cycloaddition and Annulation with Diene and Heterodiene Systems	96
3.6.1	Dienes as Traps for 1,3-Zwitterions	97
3.6.2	Reactions of [4+3]-Cyclization with Heterodiene Systems and Their Analogs	99
3.7	Other Formal [n+m]-Cycloaddition and Annulation Processes	102
3.7.1	Formal [8+3]-Cycloaddition Reactions	102
3.7.2	Other Formal Stepwise “High-Order” Cycloaddition/Annulation Reactions	103
3.7.3	Formal [3+1]- and [3+1+1]-Cycloadditions	105
3.7.4	Cycloaddition/Annulation Reactions Proceed via Generation of β-Styrylmalonates	106
3.7.5	GaCl ₃ -Mediated Cycloaddition/Annulation Reactions via Generation of 1,2-Zwitterionic Intermediates	109
3.8	Cyclodimerization Reactions of D-A Cyclopropanes	112
3.9	Miscellaneous Reactions, Stepwise Cyclization Reactions, Cyclizations with Involvement of Functional Groups	118
3.9.1	Stepwise Cyclization Using Substrates with Two Nitrogen Atoms	118
3.9.2	Some Other Cascade and Miscellaneous Formal Cycloaddition Reactions for Cyclopropanedicarboxylates	119

3.9.3	Formal Cycloaddition and Cyclization Reactions for 2-Aryl D–A Cyclopropanes Containing Active Substituent in <i>Ortho</i> -Position	122
3.9.4	Cyclization Reactions of D–A Cyclopropanes with Additional CHO Group in Donor Part	123
3.9.5	Miscellaneous Cyclizations with Phenols and Nitrogen-Containing Heterocycles	124
3.9.6	Some Cyclization Reactions of 1,1-Dicyano Cyclopropanes	125
3.9.7	Miscellaneous Cyclizations with Sulfur Reagents	126
3.9.8	Cyclizations of Cyclopropanes Containing Carbonyl Group as an Acceptor with Amine Reagents	127
3.9.9	Miscellaneous Reactions	128
	References	129
4	Activation of Donor–Acceptor Cyclopropanes under Covalent Organocatalysis: Enamine, Iminium, NHC, Phosphine and Tertiary Amine Catalysis	139
	<i>Efraim Reyes, Liher Prieto, Luisa Carrillo, Uxue Uribe, and Jose L. Vicario</i>	
4.1	Introduction	139
4.2	Secondary Amine Catalysis: Enamine Activation	141
4.3	Secondary Amine Catalysis: Iminium Ion Activation	144
4.4	NHC Catalysis: Activation Through Breslow Intermediates	148
4.5	Phosphine or Tertiary Amine Catalysis	157
4.6	Conclusion	162
	References	162
5	Ring-Opening 1,3-Bisfunctionalization of Donor–Acceptor Cyclopropanes	167
	<i>Avishek Guin and Akkattu T. Biju</i>	
5.1	Introduction	168
5.2	Enantioselective 1,3-Dichlorination of Formyl Group-Containing Cyclopropanes	168
5.3	Ring-Opening 1,3-Dichlorination of D–A Cyclopropanes	169
5.4	1,3-Chlorochalcogenation of Cyclopropyl Carbaldehydes	170
5.5	1,3-Bisfunctionalization of D–A Cyclopropanes with Arenes and Nitrosoarenes	172
5.6	1-Amino-3-Aminomethylation of D–A Cyclopropanes	173
5.7	1,3-Halochalcogenation of D–A Cyclopropanes	174
5.8	1,3-Aminobromination of D–A Cyclopropanes	175
5.9	Reaction of D–A Cyclopropanes with 4,5-Diazaspiro[2.4]hept-4-enes	176
5.10	Four-Component Coupling of D–A Cyclopropanes	177
5.11	1,3-Aminochalcogenation of Donor–Acceptor Cyclopropanes	178
5.12	1,3-Bisfunctionalization of Donor–Acceptor Containing Cyclopropyl Boronic Ester	178

5.13	1,3-Halogenation–Peroxidation of D–A Cyclopropanes	178
5.14	1,3-Aminothiolation of D–A Cyclopropanes Using Sulfenamides	180
5.15	1,3-Bisarylation of D–A Cyclopropanes with Electron-Rich Arenes and Hypervalent Arylbismuth Reagents	181
5.16	Conversion of D–A Cyclopropanes to β -Hydroxy Ketones	182
5.17	1,3-Carbothiolation of D–A Cyclopropanes	183
5.18	1,3-Haloamination of D–A Cyclopropanes Employing Copper Salt and <i>N</i> -Fluorobenzenesulfonimide	184
5.19	Ring-Opening 1,3-Carbocarbonation of D–A Cyclopropanes	185
5.20	1,3-Aminofunctionalization of D–A Cyclopropanes	187
5.21	Conclusion	188
	References	188
6	Molecular Rearrangements in Donor–Acceptor Cyclopropanes	191
	<i>Igor V. Trushkov and Olga A. Ivanova</i>	
6.1	Introduction	191
6.2	Donor–Acceptor Cyclopropane Isomerizations to Alkenes (Cyclopropane–Propene Rearrangement)	192
6.3	Vinylcyclopropane–Cyclopentene Rearrangement	197
6.4	Cloke–Wilson Rearrangement and Related Processes	202
6.4.1	Rearrangement of Acyl-substituted Cyclopropanes to 2,3-dihydrofurans	202
6.4.2	The Cloke–Wilson Rearrangements Affording Pyrrole Derivatives	208
6.4.3	The Related Rearrangements Affording Other Heterocycles	209
6.5	Nazarov Reaction and its Homo-Version	210
6.6	The Cope Rearrangement and Related Isomerizations of Donor–Acceptor Cyclopropanes	215
6.7	Intramolecular Nucleophilic Ring Opening/Ring Closure and Related Processes	218
	References	221
7	Donor–Acceptor Cyclopropanes with an Amino Group as Donor	227
	<i>Ming-Ming Wang and Jerome Waser</i>	
7.1	Introduction	227
7.2	Synthesis of DA Aminocyclopropanes	229
7.2.1	Synthesis of DA Aminocyclopropanes from β -Dehydroamino Acids (Route A)	231
7.2.2	Synthesis of DA Aminocyclopropanes from Enamines (Route B)	231
7.2.3	Synthesis of DA Aminocyclopropanes from Acrylates (Route C)	233
7.2.4	Synthesis of DA Aminocyclopropanes from Cyclopropene (Route D1)	233
7.2.5	Synthesis of DA Aminocyclopropanes from 2-Haloethylidene Malonates (Route D2)	233
7.2.6	Synthesis of DA Aminocyclopropanes from Cyclopropylamines (Route E)	234

7.3	Ring-Opening Reactions of DA Aminocyclopropanes	235
7.3.1	Intramolecular Ring-Opening of DA Aminocyclopropanes	236
7.3.2	Intermolecular Ring-Opening of DA Aminocyclopropanes	240
7.4	Formal Cycloaddition of DA Aminocyclopropanes	244
7.5	Conclusion	250
	Abbreviations	250
	References	251
8	Reactivity of Cyclopropyl Monocarbonyls	255
	<i>Pankaj Kumar, Irshad Maajid Taily, Priyanka Singh, and Prabal Banerjee</i>	
8.1	Introduction	255
8.2	Associated Challenges	256
8.2.1	Reduced Reactivity	256
8.2.2	Diastereomers and Controlled Reactivity	257
8.3	Perks of Having a Monocarbonyl Substituent on Cyclopropane	258
8.3.1	DAC Monocarbonyls—Not Merely a Three-Carbon Synthon	258
8.3.2	Two Nucleophilic and Two Electrophilic Sites	258
8.3.3	Cyclopropane Mono-Carbonyls in Organocatalysis	259
8.4	Methods for the Preparation of Cyclopropyl Monocarbonyls	260
8.4.1	From Olefins	260
8.4.1.1	Corey–Chaykovsky Reaction	260
8.4.1.2	Hydroformylation of Cyclopropenes	261
8.4.1.3	Ozonolysis of Vinyl Cyclopropanes	261
8.4.2	From Homoaldol Adducts	261
8.4.3	From Arylthio Cyclopropyl Carbaldehydes	262
8.4.4	From Diazo Compounds	262
8.4.5	From 1,2-Dicarbonyl Compounds	263
8.5	Cyclopropyl Monocarbonyls in Important Heterocyclic Synthesis	264
8.5.1	Metal Catalyzed Annulation Reactions of Cyclopropyl Monocarbonyls	264
8.5.2	Ring Expansion and Ring-Opening Reactions of Cyclopropyl Monocarbonyls	267
8.6	Application in Total Synthesis	270
	References	270
9	Chemistry of Aroyl- and Nitro-Substituted Donor–Acceptor Cyclopropanes	273
	<i>Thangavel Selvi and Kannupal Srinivasan</i>	
9.1	Introduction	273
9.2	Synthesis of Aroyl-Substituted D–A Cyclopropanes	274
9.3	Synthetic Applications of Aroyl-Substituted D–A Cyclopropanes	276
9.3.1	AlCl ₃ or SnCl ₄ -Mediated Ring-Opening Reactions	276
9.3.2	TiCl ₄ -Mediated Ring-Opening Reactions	278
9.3.3	Ring-Opening Reactions with Hydrazines	278
9.3.4	Ring-Opening Reactions with 1-Naphthylamines	280

9.3.5	(3 + 2) Annulations with Nitriles	280
9.3.6	(3 + 3) Annulation with Mercaptoacetaldehyde	282
9.3.7	Conversion of Aroyl-Substituted D–A Cyclopropanes into γ -Butyrolactone-Fused D–A Cyclopropanes and their Synthetic Applications	285
9.3.8	Works from Yang and Sekar Research Groups	286
9.4	Synthesis of Nitro-Substituted D–A Cyclopropanes	289
9.5	Synthetic Applications of Nitro-Substituted D–A Cyclopropanes	291
9.5.1	BF ₃ -Mediated Ring-Opening Reactions	291
9.5.2	Reactions with Nitriles	292
9.5.3	Reactions with Activated Aromatics	293
9.5.4	Reaction with Mercaptoacetaldehyde Dimer	293
9.5.5	Ring-Opening Reactions with 2-Aminopyridines	294
9.5.6	Works from He, Xia, and Asahara Groups	296
9.6	Conclusion	297
	References	298
10	Metal-Free Activation of the Donor–Acceptor Cyclopropanes: Protic Acids, Bases, and Thermal Reactions	301
	<i>Lijia Wang and Yong Tang</i>	
10.1	Introduction	301
10.2	Metal-Free Electrophilic Activation of D–A Cyclopropanes	302
10.3	Metal-Free Nucleophilic Activation of D–A Cyclopropanes	313
10.4	Catalyst-Free Activation of D–A Cyclopropanes	319
10.5	Metal-Free Activation of D–A Cyclopropanes via Radical, SET, and Photopromoted Process	327
10.6	Conclusion	329
	References	330
11	Asymmetric Catalytic Activation of Donor–Acceptor Cyclopropanes	333
	<i>Yong Xia, Xiaohua Liu, and Xiaoming Feng</i>	
11.1	Introduction	333
11.2	Chiral Lewis Acid-Catalyzed Reactions of D–A Cyclopropanes	334
11.2.1	Asymmetric Reactions of Two-Substituted Cyclopropane-1,1-Dicarboxylates	334
11.2.1.1	Ring-Opening Reactions	334
11.2.1.2	[3 + n] Annulations	337
11.2.2	Asymmetric Reactions of 2-Substituted Cyclopropane-1,1-Diketones	341
11.3	Chiral Low-Valent Transition Metal Promoted Reactions of Vinyl Cyclopropanes	343
11.3.1	Ring-Opening Reactions	344
11.3.2	[3 + n] Annulations	345
11.4	Chiral Organocatalytic Reactions of D–A Cyclopropanes and Miscellaneous	349

11.4.1	Enamine/Iminium Catalysis Activation	349
11.4.2	Brønsted Base Catalyst Activation	350
11.4.3	Nucleophilic Catalyst Activation	351
11.4.4	Brønsted Acid Catalyst Activation	352
11.4.5	Radical Pathway	353
11.5	Conclusion	355
	References	355
12	Application of Donor–Acceptor Cyclopropanes in Total Synthesis of Natural Products	359
	<i>Amrita Saha, Karuna Mahato, Satysen Yadav, and Manas K. Ghorai</i>	
12.1	Introduction	359
12.2	Synthesis of Alkaloids	360
12.3	Synthesis of Terpene/Terpenoids	379
12.4	Synthesis of Miscellaneous Natural Products	403
12.5	Conclusion	427
