

## TABLE OF CONTENTS

|                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------|-----|
| <b>Minimal Pairs for Polynomial Time Reducibilities</b><br>K. Ambos-Spies .....                                   | 1   |
| <b>Primitive Recursive Word-Functions of One Variable</b><br>G. Asser .....                                       | 14  |
| <b>Existential Fixed-Point Logic</b><br>A. Blass , Y. Gurevich.....                                               | 20  |
| <b>Unsolvable Decision Problems for Prolog Programs</b><br>E. Börger.....                                         | 37  |
| <b>You have not Understood a Sentence, unless You Can Prove it</b><br>H.-J. Brämik.....                           | 49  |
| <b>On the Minimality of K, F, and D or: Why Löten is Non-Trivial</b><br>A. Brüggemann-Klein, R. Klein .....       | 59  |
| <b>A 5-Color-Extension-Theorem</b><br>H.-G. Carstens.....                                                         | 67  |
| <b>Closure Relations, Buchberger's Algorithm, and Polynomials in Infinitely Many Variables</b><br>D.E. Cohen..... | 78  |
| <b>The Benefit of Microworlds in Learning Computer Programming</b><br>E. Cohors-Fresenborg.....                   | 88  |
| <b>Skolem Normal Forms Concerning the Least Fixpoint</b><br>E. Dahlhaus.....                                      | 101 |
| <b>Spectral Representation of Recursively Enumerable and Coenumerable Predicates</b><br>M. Deutsch.....           | 107 |
| <b>Aggregating Inductive Expertise on Partial Recursive Functions</b><br>A.Drosdol, B. Schinzel.....              | 117 |

|                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Domino Threads and Complexity<br>H.-D. Ebbinghaus.....                                                                                   | 131 |
| Modelling of Cooperative Processes<br>E. Engeler.....                                                                                    | 143 |
| A Setting for Generalized Computability<br>G. Germano, S. Mazzanti.....                                                                  | 154 |
| First-order Spectra with One Variable<br>E. Grandjean.....                                                                               | 166 |
| On the Early History of Register Machines<br>G. Hasenjaeger.....                                                                         | 181 |
| Randomness, Provability, and the Separation of Monte Carlo Time and<br>Space<br>M. Karpinski, R. Verbeek.....                            | 189 |
| Representation Independent Query and Update Operations on Propositional<br>Definite Horn Formulas<br>H. Kleine Büning, T. Lettmann ..... | 208 |
| Direct Construction of Mutually Orthogonal Latin Squares<br>H. Kull, E. Specker.....                                                     | 224 |
| Negative Results about the Length Problem<br>M. Kummer.....                                                                              | 237 |
| Some Results on the Complexity of Powers<br>T. Lickteig, H. Volger.....                                                                  | 249 |
| The Turing Complexity of AF $C^*$ -Algebras with Lattice-ordered $K_0$<br>D. Mundici.....                                                | 256 |
| Remarks on SASL and the Verification of Functional Programming<br>Languages<br>K. Nökel, R. Rehbold, M.M. Richter.....                   | 265 |

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| <b>Numerical Stability of Simple Geometric Algorithms in the Plane</b><br>T. Ottmann, G. Thiemt, C. Ulrich ..... | 277 |
| <b>Communication with Concurrent Systems via I/O-Procedures</b><br>L. Priese.....                                | 294 |
| <b>A Class of exp-time Machines which can be Simulated by Polytape Machines</b><br>B. Scarpellini.....           | 306 |
| <b>alpha-beta-gamma-Automata Realizing Preferences</b><br>I. Schwank.....                                        | 320 |
| <b>Ein einfaches Verfahren zur Normalisierung unendlicher Herleitungen</b><br>H. Schwichtenberg.....             | 334 |
| <b>Grammars for Terms and Automata. On a Book by the late J. Richard Büchi</b><br>D. Siefkes.....                | 349 |
| <b>Relative Konsistenz</b><br>W. Sieg.....                                                                       | 360 |
| <b>Segment Translation Systems</b><br>W.A. Slaby.....                                                            | 382 |
| <b>First Steps towards a Theory of Complexity over more General Data Structures</b><br>V. Sperschneider.....     | 391 |
| <b>On the Power of Single-Valued Nondeterministic Polynomial Time Computations</b><br>D. Spreen, H. Stahl.....   | 403 |
| <b>A Concatenation Game and the Dot-Depth Hierarchy</b><br>W. Thomas.....                                        | 415 |
| <b>Do there Exist Languages With an Arbitrarily Small Amount of Context-Sensitivity</b><br>K.W. Wagner.....      | 427 |
| <b>The Complexity of Symmetric Boolean Functions</b><br>I. Wegener.....                                          | 433 |
