

Contents

1. What Are One-Dimensional Conductors?	1
2. Fundamental Properties of Electronic Systems in One Dimension.....	4
2.1 The One-Dimensional Conduction Band and the Peierls Instability.....	4
2.1.1 Conduction Electrons in a One-Dimensional Band..	4
2.1.2 The Peierls Instability and the Peierls Transition...	7
a) The Polarization Function.....	7
b) The Peierls Transition.....	12
2.1.3 Electron-Phonon Coupling and Kohn Anomalies ...	15
a) Electron-Phonon Interactions.....	15
b) The Kohn Anomaly.....	17
c) The Order Parameter of the Peierls Transition .	19
2.1.4 Nesting of the Fermi Surface.....	20
2.2 Charge Density Waves.....	22
2.2.1 Charge Density Waves and the Peierls-Fröhlich Mechanism.....	22
2.2.2 Dynamics of Charge Density Waves.....	26
a) Phonons.....	26
b) Motion of the Phase.....	28
c) Pinning.....	29
d) Electrical Conduction Due to the Sliding Motion of Charge Density Waves.....	31
e) Phase Solitons and Electrical Conductivity.....	32
2.3 Fluctuations and Three-Dimensionality.....	35
2.3.1 Fluctuations in One Dimension.....	36
2.3.2 Fluctuations and the Pseudo-Gap.....	38
2.3.3 Three-Dimensionality and the Peierls Transition ...	39
2.4 Roles of the Coulomb Interaction.....	41
2.4.1 The Tight-Binding Model.....	41
2.4.2 Short-Range Coulomb Interactions.....	43
2.4.3 Long-Range Coulomb Interactions.....	45
2.4.4 Coulomb Interactions and Charge Density Waves ..	45
2.4.5 The Spin-Peierls Transition.....	46

3. Properties of TTF-TCNQ and Its Family	48
3.1 Molecular Synthesis and Crystal Growth	48
3.2 Electrical Properties	52
3.2.1 The One-Dimensional Conduction Band and the Electrical Conductivity	52
3.2.2 One-Dimensionality of the Metallic Property	57
3.2.3 High Frequency Conductivity	61
3.2.4 Nonlinear Conduction in the Insulating Phase	63
3.3 Magnetic Properties	64
3.3.1 Spin Susceptibility	64
3.3.2 Spin Susceptibility of Each Kind of Molecular Stack	67
3.4 Behaviour of the CDW	71
3.4.1 The $2k_F$ CDW and the Kohn Anomaly	71
3.4.2 Interchain Interactions	77
3.4.3 Origins of the $4k_F$ CDW	80
3.4.4 Dynamics of Charge Density Waves	82
3.5 Characteristic Properties of Compounds Belonging to the Family of TTF-TCNQ	86
3.5.1 TSeF-TCNQ	87
3.5.2 HMTTF-TCNQ and TMTSF-TCNQ	89
3.5.3 NMP-TCNQ	92
3.5.4 TMTSF-DMTCNQ	94
3.6 Superconductivity in $(\text{TMTSF})_2\text{X}$ and Its Family	96
3.6.1 Crystal Structure of $(\text{TMTSF})_2\text{X}$	96
3.6.2 Electrical Properties	97
3.6.3 Superconductivity	98
3.6.4 Spin Density Waves	102
3.6.5 Orientational Ordering of Counter Anions X	103
3.6.6 Superconductivity in $(\text{BEDT-TTF})_2\text{X}$	104
a) $(\text{BEDT-TTF})_2\text{ReO}_4$	104
b) $(\text{BEDT-TTF})_2\text{I}_3$	105
4. Properties of MX_3	106
4.1 Preparation and Crystal Structure	107
4.1.1 Preparation of Single Crystals	107
4.1.2 Crystal Structure	107
4.2 Charge Density Waves in NbSe_3	111
4.2.1 Anomalies in the dc Conductivity and the Periodic Lattice Distortion	111
4.2.2 Conductivity Anisotropy, Hall Effect and Thermoelectric Power	118

4.2.3	Nonlinear Electrical Conductivity: Sliding Motion of Charge Density Waves	123
a)	The dc Conductivity	123
b)	High Frequency Conductivity and Dielectric Constant.....	129
c)	Electrical Noise	130
d)	Sliding CDW: A Rigid Body?	132
4.2.4	Superconductivity	132
4.3	Charge Density Waves in TaS ₃	134
4.3.1	"Orthorhombic" (o-)TaS ₃	134
4.3.2	Monoclinic (m-)TaS ₃	138
4.4	Superconductivity in TaSe ₃	139
5.	Properties of KCP	144
5.1	Mixed Valence Pt Compounds.....	144
5.2	Crystal Structure and the Preparation of Single Crystals..	145
5.2.1	Preparation of Single Crystals	145
5.2.2	Crystal Structure	147
5.2.3	Crystal Structure and Electronic States.....	149
5.3	Electrical Properties.....	150
5.3.1	Electrical Conductivity	150
5.3.2	Optical Properties.....	152
5.4	Magnetic Properties.....	156
5.4.1	Magnetic Susceptibility	156
5.4.2	Electron Spin Resonance.....	157
5.4.3	Nuclear Magnetic Resonance.....	158
5.5	Charge Density Waves and the Kohn Anomaly.....	161
5.5.1	X-ray Scattering.....	162
5.5.2	Structural Analysis by X-ray and Neutron Diffraction	164
5.5.3	Elastic Neutron Scattering.....	164
5.5.4	Inelastic Neutron Scattering	167
5.6	Behaviour of the Water of Crystallization	169
5.6.1	Position of the Water of Crystallization	169
5.6.2	The Amount and Physical Properties of the Water of Crystallization	169
5.6.3	Motion of Water Molecules and Ultrasonic Anomalies	170
5.6.4	Motion of the Water of Crystallization Studied by ¹ H NMR.....	172
5.7	Band Model and Mixed Valence Model	175
5.7.1	X-ray Photoelectron Spectroscopy (XPS)	176

5.7.2	Magnetic Properties and Electrical Conductivity ...	178
5.7.3	Nuclear Spin Relaxation of ^{195}Pt Nuclei	180
5.7.4	Electron Spin Relaxation	181
a)	Spin-Lattice Relaxation	181
b)	Spin-Spin Relaxation	183
5.7.5	Neutron Diffraction	186
5.7.6	Raman Scattering	188
5.7.7	The Mixed-Valence State of Pt Ions	188
5.7.8	Comments on the Mixed-Valence Model	190
6.	Properties of the Linear Chain Polymers $(\text{CH})_x$ and $(\text{SN})_x$	191
6.1	Properties of $(\text{CH})_x$	192
6.1.1	Synthesis of $(\text{CH})_x$ and Its Structure	192
6.1.2	One-Electron States in the Band	193
6.1.3	Solitons and the Electrical Conductivity	196
6.2	Properties of $(\text{SN})_x$	199
6.2.1	The Synthesis and Structure of $(\text{SN})_x$	199
6.2.2	Electronic Properties	201
6.2.3	Band Structure	202
6.2.4	One-Dimensionality and the Kohn Anomaly	204
7.	Properties of Linear-Chain Mercury Compounds	206
7.1	Synthesis and Crystal Structure	206
7.2	Metallic Conductivity and Superconductivity	207
7.3	The One-Dimensional Lattice of Mercury Chains	213
7.3.1	One-Dimensional Liquid Mercury and Its Condensation	213
7.3.2	Mass-Density Waves	216
	Appendix	219
