

Contents

Preface	v
1 Moduli of Abelian Varieties	1
<i>C-L. Chai</i>	
2 Classical Constants and Functions: Computations and Continued Fraction Expansions	13
<i>D. V. Chudnovsky and G. V. Chudnovsky</i>	
3 Some Special Complex Multiplications in Two Variables Using Hilbert Singular Moduli	75
<i>H. Cohn</i>	
4 A Numerical Survey of the Reduction of Modular Curve Genus by Fricke's Convolutions	85
<i>H. Cohn</i>	
5 Conjectures Relating to a Generalization of the Ramanujan Tau Function	105
<i>J. I. Deutsch</i>	
6 The Set of Multiples of a Short Interval	119
<i>R. R. Hall and G. Tenenbaum</i>	
7 Comparison of Maaß Wave Forms	129
<i>J. Huntley</i>	
8 Explicit Construction of the Hilbert Class Fields of Imaginary Quadratic Fields by Integer Lattice Reduction	149
<i>E. Kaltofen and N. Yui</i>	
9 On Certain q-Polynomials	203
<i>J. Lewittes</i>	
10 A Gap Theorem for Differentially Algebraic Power Series	211
<i>L. Lipshitz and L. A. Rubel</i>	
11 Class Number Formulas for Imaginary Pure Quadratic Number Fields	215
<i>C. Meyer</i>	

12 Rational Desingularization of a Curve Defined Over a Finite Field	229
<i>A. T. Vasquez</i>	
13 Special Values of Zeta-Functions of Fermat Varieties Over Finite Fields	251
<i>N. Yui</i>
