

Contents

Keynote Paper

Software risk management <i>B. Boehm</i>	1
---	---

Invited Papers

MENU - An example for the systematic reuse of specifications <i>M. Wirsing, R. Hennicker and R. Stabl</i>	20
Asking for the impossible : The state of the art in safety-related systems <i>M. Thomas</i>	42
STEPS to software development with users <i>C. Floyd, F.-M. Reisin and G. Schmidt</i>	48

Measurement

The role of measurement in ISEEs <i>H. D. Rombach</i>	65
An empirical and theoretical analysis of an information flow-based system design metric <i>D. C. Ince and M. J. Shepperd</i>	86

Software Processes Modelling

Systematic development of formal software process models <i>W. Deiters, W. Schaefer and V. Gruhn</i>	100
Software process machines : a framework for future software development environments <i>P. Armenise</i>	118

Practical Experience with Formal Methods

Practical experience of formal specification : a programming interface for communications <i>J. Wordsworth</i>	140
Industrialising formal methods for telecommunications <i>M. T. Norris and S. G. Stockman</i>	159

Software Configuration Management

An application of the event calculus for representing the history of a software project <i>D. Nardi and M. Tucci</i>	176
Change oriented versioning <i>A. Lie, T. Didriksen, R. Conradi and E.-A. Karlsson, S. O. Hallsteinsen and P. Holager</i>	191
Software change dynamics or half of all Ada™ compilations are redundant <i>R. Adams, A. Weinert and W. Tichy</i>	203
Version management in the PACT integrated software engineering environment <i>F. Oquendo, K. Berrada, F. Gallo, R. Minot and I. Thomas</i>	222

Formal Approaches

Software engineering implications for formal refinement <i>A. Dix</i>	243
A rigorous development strategy using the OBJ specification language and the MALPAS program analysis tool <i>R. N. Shutt</i>	260
Formal specification using structured systems analysis <i>R. B. France and T. W. G. Docker</i>	292

Tools and Environments

Tool integration in an open environment <i>M. Lacroix and M. Vanhoedenaghe</i>	311
HCDM/GSDS - A design environment for real-time software with automatic program generation <i>M. Fastenbauer and H. Saria</i>	324
Graph grammars, a new paradigm for implementing visual languages <i>H. Goettler</i>	336

Software Metrics

Structural modelling of prolog for metrication <i>M. Myers</i>	351
Rule-based handling of software quality and productivity models <i>H.-L. Hausen</i>	376

Requirements Engineering

An object-oriented approach to the system analysis <i>F. Manfredi, G. Orlando and P. Tortorici</i>	395
A pluralistic knowledge-based approach to software specification <i>C. Niskier, T. Maibaum and D. Schwabe</i>	411
PROTOB : a hierarchical object-oriented CASE tool for distributed systems <i>M. Baldassari, G. Bruno, V. Russi and R. Zompi</i>	424

Analysis and Validation

The internet worm incident <i>E. H. Spafford</i>	446
Validation of concurrent Ada™ programs using symbolic execution <i>S. Morasca and M. Pezze</i>	466
Assay - a tool to support regression testing <i>R. Lewis, D. W. Beck and J. Hartmann</i>	487
