|----------------------------------------------------------------------------------------|-------------|
| PREFACE .....                                                                          | 3           |
| 1. INTRODUCTION AND REVIEW OF PREVIOUS LITERATURE .....                                | 9           |
| 1.1 The Hydrogen Atom .....                                                            | 9           |
| 1.2 Angular Momentum Algebra .....                                                     | 11          |
| 1.3 Problems .....                                                                     | 15          |
| 1.4 Annotated Bibliography and References .....                                        | 17          |
| 2. CLEBSCH-GORDAN COEFFICIENTS .....                                                   | 19          |
| 2.1 Problems .....                                                                     | 22          |
| 2.2 Annotated Bibliography and References .....                                        | 23          |
| 3. WIGNER-ECKART THEOREM .....                                                         | 24          |
| 3.1 A Single d Electron in a Crystal Field .....                                       | 25          |
| 3.2 Problems .....                                                                     | 31          |
| 3.3 Annotated Bibliography and References .....                                        | 33          |
| 4. UNIT SPHERICAL TENSORS .....                                                        | 35          |
| 4.1 Discussion .....                                                                   | 35          |
| 4.2 Bibliography and References .....                                                  | 38          |
| 5. RACAH COEFFICIENTS .....                                                            | 39          |
| 5.1 Problems .....                                                                     | 44          |
| 5.2 Bibliography and References .....                                                  | 48          |
| 6. RACAH ALGEBRA .....                                                                 | 49          |
| 6.1 Problems .....                                                                     | 56          |
| 6.2 Annotated Bibliography and References .....                                        | 65          |
| 7. FREE-ION HAMILTONIAN UNFILLED CONFIGURATION $n\ell^N$<br>$[N < 2(2\ell + 1)]$ ..... | 66          |
| 7.1 Background for Free Ions .....                                                     | 66          |
| 7.2 Significant Free-Ion Interactions .....                                            | 69          |
| 7.2.1 Coulomb Interaction .....                                                        | 69          |
| 7.2.2 Spin-Orbit Interaction .....                                                     | 71          |
| 7.2.3 Interconfigurational Interaction .....                                           | 76          |
| 7.2.4 Other Interactions .....                                                         | 76          |

|                                                                                                                 | <u>Page</u> |
|-----------------------------------------------------------------------------------------------------------------|-------------|
| 7.3 Summary .....                                                                                               | 77          |
| 7.4 Problems .....                                                                                              | 77          |
| 7.5 Annotated Bibliography and References .....                                                                 | 79          |
| 8. CRYSTAL-FIELD INTERACTIONS--PHENOMENOLOGICAL THEORY<br>OF CRYSTAL FIELDS .....                               | 81          |
| 8.1 Discussion .....                                                                                            | 81          |
| 8.2 Problems .....                                                                                              | 87          |
| 8.3 Annotated Bibliography and References .....                                                                 | 88          |
| 9. MATRIX ELEMENTS OF $H_2$ IN TOTAL ANGULAR MOMENTUM STATE FOR<br>THE ELECTRONIC CONFIGURATION $n\ell^N$ ..... | 89          |
| 9.1 Discussion .....                                                                                            | 89          |
| 9.2 Bibliography and References .....                                                                           | 92          |
| 10. GROUP THEORETICAL CONSIDERATIONS .....                                                                      | 92          |
| 10.1 Discussion .....                                                                                           | 93          |
| 10.2 Annotated Bibliography and References .....                                                                | 101         |
| 11. NUMERICAL EXAMPLE: ${}^4F_J$ STATES OF $Nd^{3+}$ ( $4f^3$ ) .....                                           | 103         |
| 11.1 ${}^4F_{3/2}$ .....                                                                                        | 104         |
| 11.2 ${}^4F_{5/2}$ .....                                                                                        | 105         |
| 11.3 ${}^4F_{7/2}$ .....                                                                                        | 106         |
| 11.4 ${}^4F_{9/2}$ .....                                                                                        | 107         |
| 11.5 Calculations .....                                                                                         | 108         |
| 11.6 References .....                                                                                           | 110         |
| 12. CLASSICAL POINT-CHARGE MODEL .....                                                                          | 111         |
| 12.1 Discussion .....                                                                                           | 111         |
| 12.2 Bibliography and References .....                                                                          | 117         |
| 13. POINT-CHARGE MODEL DEVELOPED AT HDL .....                                                                   | 119         |
| 13.1 Screening and Wave Function Spread .....                                                                   | 119         |
| 13.2 Effective Charge and Position .....                                                                        | 120         |
| 13.3 Annotated Bibliography and References .....                                                                | 125         |
| 14. CRYSTAL-FIELD EFFECTS NOT YET FULLY INCORPORATED .....                                                      | 128         |
| 14.1 Self-Consistent Point Dipole and Point Multipole .....                                                     | 128         |
| 14.2 Self-Consistent Results for Scheelite Structure .....                                                      | 132         |
