

# TABLE OF CONTENTS

|                                                        |    |
|--------------------------------------------------------|----|
| 1. Introduction .....                                  | 1  |
| 1.1. The goals of PORTAL .....                         | 1  |
| 1.2. Syntax representation .....                       | 2  |
| 2. Lexical symbols .....                               | 4  |
| 2.1. The alphabet .....                                | 4  |
| 2.2. Basic definitions .....                           | 4  |
| 2.3. The structure of program texts .....              | 5  |
| 2.4. Comments .....                                    | 6  |
| 2.5. Options .....                                     | 6  |
| 2.6. Identifiers .....                                 | 6  |
| 2.7. Reserved words .....                              | 7  |
| 2.8. Numeric literals .....                            | 8  |
| 2.8.1. Unsigned integers .....                         | 8  |
| 2.8.2. Unsigned reals .....                            | 8  |
| 2.8.3. Unsigned numbers .....                          | 9  |
| 2.9. Character Literals .....                          | 9  |
| 2.10. Character Strings .....                          | 10 |
| 3. Constants .....                                     | 11 |
| 3.1. Definition and examples .....                     | 11 |
| 3.2. The constant declaration .....                    | 12 |
| 3.2.1. The simple constant declaration .....           | 13 |
| 3.2.2. The construction of string constants .....      | 14 |
| 4. Data types .....                                    | 15 |
| 4.1. Simple data types .....                           | 15 |
| 4.1.1. The standard type INTEGER .....                 | 16 |
| 4.1.2. The standard type BOOLEAN .....                 | 17 |
| 4.1.3. The standard type CHAR .....                    | 18 |
| 4.1.4. The standard type REAL .....                    | 19 |
| 4.1.5. Symbolic types .....                            | 20 |
| 4.1.6. Subrange types .....                            | 21 |
| 4.1.7. Index types .....                               | 22 |
| 4.1.8. Operations and standard routines .....          | 24 |
| 4.2. Array types .....                                 | 25 |
| Array operations .....                                 | 26 |
| 4.3. Record types .....                                | 27 |
| Record operations .....                                | 28 |
| a) Selective access to components .....                | 29 |
| b) The "with" notation .....                           | 29 |
| 4.4. Case types .....                                  | 30 |
| Case type operations .....                             | 31 |
| a) Access to the tag field .....                       | 31 |
| b) The case-statement .....                            | 32 |
| c) The with-set-statement .....                        | 32 |
| d) Access when the value of the tag field is known ... | 33 |
| 4.5. Set types .....                                   | 34 |
| Set operations .....                                   | 34 |
| a) Set constructors .....                              | 34 |
| b) Set relations .....                                 | 35 |
| c) Set operations .....                                | 36 |

|                                                                                             |    |
|---------------------------------------------------------------------------------------------|----|
| 4.6. String types .....                                                                     | 37 |
| String manipulations .....                                                                  | 38 |
| a) String constructors .....                                                                | 38 |
| b) String selectors .....                                                                   | 39 |
| c) Assignments .....                                                                        | 40 |
| d) String relations .....                                                                   | 41 |
| e) Standard functions .....                                                                 | 42 |
| 4.7. The type declaration .....                                                             | 43 |
| 5. Variables .....                                                                          | 45 |
| 5.1. Definition and examples .....                                                          | 45 |
| 5.2. Introducing variables .....                                                            | 47 |
| 5.2.1. The variable declaration .....                                                       | 47 |
| Compatibility .....                                                                         | 47 |
| 5.2.2. Temporary variables .....                                                            | 48 |
| 5.2.3. Read-only variables .....                                                            | 49 |
| 6. Expressions .....                                                                        | 51 |
| 6.1. Definition and examples .....                                                          | 51 |
| 6.2. The evaluation of expressions and operator precedence.....                             | 53 |
| The evaluation of boolean expressions .....                                                 | 54 |
| 6.3. The function call .....                                                                | 55 |
| 7. Statements .....                                                                         | 59 |
| 7.1. The assignment-statement .....                                                         | 59 |
| a) The ordinary assignment .....                                                            | 59 |
| b) Special assignments .....                                                                | 60 |
| c) Type compatibility .....                                                                 | 60 |
| 7.2. The procedure call .....                                                               | 61 |
| 7.3. Selective statements .....                                                             | 65 |
| 7.3.1. The if-statement .....                                                               | 65 |
| 7.3.2. The case-statement .....                                                             | 67 |
| a) The ordinary case-statement .....                                                        | 67 |
| b) The case-statement for case types .....                                                  | 68 |
| 7.4. Iterative statements .....                                                             | 70 |
| 7.4.1. The while-statement .....                                                            | 71 |
| 7.4.2. The repeat-statement .....                                                           | 71 |
| 7.4.3. The loop-statement .....                                                             | 72 |
| 7.5. The with-statement .....                                                               | 73 |
| a) The with-statement for convenient access to the<br>(exported) routines of a module ..... | 73 |
| b) The with-statement for variables .....                                                   | 74 |
| c) The with-set-statement .....                                                             | 75 |
| d) The with-statement for expressions .....                                                 | 76 |
| e) Temporary variables .....                                                                | 76 |
| f) Nesting of with-statements .....                                                         | 77 |
| 7.6. The using-statement .....                                                              | 78 |
| 8. Routines .....                                                                           | 82 |
| 8.1. The declaration of a routine .....                                                     | 82 |
| a) The routine header .....                                                                 | 83 |
| b) The routine body .....                                                                   | 84 |
| 8.2. Functions .....                                                                        | 85 |
| a) The function header .....                                                                | 85 |
| b) The function body .....                                                                  | 86 |
| c) Examples .....                                                                           | 87 |
| 8.3. Procedures .....                                                                       | 87 |
| a) The procedure header .....                                                               | 88 |
| b) The procedure body .....                                                                 | 88 |

|                                                        |     |
|--------------------------------------------------------|-----|
| c) Examples .....                                      | 89  |
| 8.4. Resources .....                                   | 90  |
| a) The resource header .....                           | 91  |
| b) The resource body .....                             | 91  |
| c) Examples .....                                      | 92  |
| 8.5. Routine types .....                               | 94  |
| 8.6. Recursion .....                                   | 96  |
| The standard resource RECURSION .....                  | 97  |
| 9. Processes and their synchronization .....           | 100 |
| 9.1. Parallel processes .....                          | 100 |
| 9.1.1. Sequential and parallel activities .....        | 100 |
| 9.1.2. The activities of a process .....               | 101 |
| 9.1.3. The interaction of processes .....              | 102 |
| 9.1.4. The advantages of parallel processes .....      | 103 |
| 9.2. Process declarations .....                        | 103 |
| 9.3. The synchronization of parallel processes .....   | 104 |
| 9.3.1. Monitors .....                                  | 104 |
| 9.3.2. Signals .....                                   | 106 |
| The signal declaration .....                           | 106 |
| The WAIT-statement with delay .....                    | 107 |
| The standard function AWAITED .....                    | 108 |
| 9.4. An example .....                                  | 108 |
| 10. Modules .....                                      | 112 |
| 10.1. The module concept .....                         | 112 |
| 10.1.1. The characteristics of modules .....           | 112 |
| Interaction with the environment .....                 | 112 |
| Initialization .....                                   | 113 |
| 10.1.2. Monitors .....                                 | 115 |
| 10.2. The module declaration .....                     | 115 |
| 10.3. The use of modules .....                         | 116 |
| a) The module as a program package .....               | 117 |
| b) The module as a data structure .....                | 120 |
| c) Exporting data types from a module .....            | 120 |
| 10.4. Module types .....                               | 121 |
| 10.4.1. The declaration of module types .....          | 121 |
| 10.4.2. The module instantiation .....                 | 123 |
| 10.4.3. The use of module types .....                  | 124 |
| a) Multisort .....                                     | 124 |
| b) Stack .....                                         | 125 |
| 11. The structure of a program .....                   | 128 |
| 11.1. The basic structure .....                        | 128 |
| 11.2. The block structure and the scope of names ..... | 128 |
| 11.2.1. Local objects .....                            | 129 |
| Temporary names .....                                  | 130 |
| Name conflicts .....                                   | 131 |
| 11.2.2. The import of objects .....                    | 131 |
| 11.2.3. The export of objects .....                    | 133 |
| "Defines" out of a resource routine .....              | 135 |
| 11.3. The lifetime of blocks .....                     | 135 |
| Appendix A. Remarks on the implementation .....        | 137 |
| A.1. Technical data .....                              | 137 |
| A.1.1. The character set .....                         | 137 |
| A.1.2. The data type INTEGER .....                     | 137 |
| A.1.3. The data type LONGINT .....                     | 137 |
| A.1.4. The data type BOOLEAN .....                     | 138 |

|                     |                                                                  |            |
|---------------------|------------------------------------------------------------------|------------|
| A.1.5.              | The data type CHAR .....                                         | 138        |
| A.1.6.              | The data type REAL .....                                         | 139        |
| A.1.7.              | The symbolic types .....                                         | 139        |
| A.1.8.              | The subrange types .....                                         | 140        |
| A.1.9.              | The set types .....                                              | 140        |
| A.1.10.             | The arrangement of variables .....                               | 141        |
| A.1.11.             | The WAIT-statement with delay .....                              | 142        |
| A.1.12.             | Code size limits .....                                           | 142        |
| A.2.                | Restrictions .....                                               | 143        |
| A.2.1.              | The construction of sets .....                                   | 143        |
| A.2.2.              | The format of case-statements .....                              | 143        |
| A.2.3.              | The call of a routine with only one parameter .....              | 143        |
| A.2.4.              | The data type of a function result .....                         | 143        |
| A.2.5.              | The call of GRANT .....                                          | 144        |
| A.2.6.              | Recursion .....                                                  | 144        |
| A.2.7.              | The initialization code of modules .....                         | 144        |
| A.2.8.              | The structure of module types .....                              | 145        |
| A.2.9.              | Multi-level "defines" of data types .....                        | 145        |
| A.2.10.             | Calling of "defined" routines .....                              | 145        |
| A.3.                | Computed constants: restrictions .....                           | 145        |
| <b>Appendix B.</b>  | <b>Machine dependent language elements .....</b>                 | <b>147</b> |
| B.1.                | Declarations with "AT" .....                                     | 147        |
| B.1.1.              | The positioning of record components .....                       | 147        |
| B.1.2.              | The placement of variables .....                                 | 148        |
| B.2.                | The standard functions "ADDR" and "ADDRHIGH" .....               | 148        |
| B.3.                | "ADDRESS" and "GRANTADDR" .....                                  | 149        |
| B.4.                | The standard function "SIZE" .....                               | 150        |
| B.5.                | External signals .....                                           | 151        |
| B.6.                | The specification of priorities for processes and monitors ..... | 151        |
|                     | Rules for the use of priorities .....                            | 152        |
| B.7.                | The standard procedure "FATAL" .....                             | 152        |
| B.8.                | The standard procedure "RSX" .....                               | 153        |
| <b>Appendix C.</b>  | <b>Options .....</b>                                             | <b>154</b> |
| a)                  | Controlling the program listing .....                            | 154        |
| b)                  | Inclusion of assembler code .....                                | 155        |
| c)                  | Options for run-time tests .....                                 | 156        |
| <b>Appendix D.</b>  | <b>Summary of available standard routines .....</b>              | <b>157</b> |
| a)                  | Standard functions .....                                         | 157        |
| b)                  | Standard procedures .....                                        | 158        |
| c)                  | Standard resource .....                                          | 159        |
| <b>Appendix E.</b>  | <b>A sample program .....</b>                                    | <b>160</b> |
| <b>Appendix F.</b>  | <b>List of all BNF definitions .....</b>                         | <b>183</b> |
| <b>Appendix G.</b>  | <b>Alphabetical list of the BNF definitions .....</b>            | <b>190</b> |
| <b>Bibliography</b> | <b>.....</b>                                                     | <b>194</b> |
| <b>Index</b>        | <b>.....</b>                                                     | <b>195</b> |
