

Table of Contents

Introduction	1
1 Fundamentals of Potentiometry	6
1.1 Electrode Processes	6
1.2 The Nernst Equation	11
1.3 Potential-Determining Ions	14
1.4 Ion-Selective Electrode Materials	21
1.5 The Potentiometric Selectivity Coefficient as a Quantitative Indication of the Electrode Selectivity	29
2 Electrode Potential Measurements	31
2.1 Reference Electrodes	31
2.2 The Standard Hydrogen Electrode as a Primary Reference Electrode	32
2.2.1 Preparation	33
2.2.2 Characteristics	34
2.3 The Liquid Junction Potential	35
2.3.1 Origin	36
2.3.2 Calculation	37
2.3.3 Salt Bridge Electrolytes	38
2.3.4 Construction of the Salt Bridge Electrolyte/Sample Solution Contact Zone	39
2.3.5 Cells Without Liquid Junction	42
2.4 Secondary Reference Electrodes	43
2.4.1 Silver/Silver Chloride	44
2.4.1.1 Preparation	44
2.4.1.2 Characteristics	45
2.4.2 Thallium Amalgam/Thallium (I) Chloride (Thalamid®)	46
2.4.2.1 Characteristics	47
2.4.3 Mercury/Mercury (I) Chloride (Calomel)	48
3 Ion-Selective Electrodes	49
3.1 General Construction Principles	49
3.2 Solid-State Membrane Electrodes	51
3.2.1 Glass Membrane Electrodes	
For Li^+ , Na^+ , K^+ , Rb^+ , Cs^+ , NH_4^+ , NR_4^+ , Ag^+ , Tl^+ Ions	51
3.2.1.1 Construction	51
3.2.1.2 Characteristics	54

3.2.1.3	Handling	55
3.2.1.4	Sample Preparation	57
3.2.2	Homogeneous Solid-State Membrane Electrodes For Ag^+ , Cd^{2+} , Cu^{2+} , Pb^{2+} , S^{2-} , F^- , Cl^- , Br^- , I^- , SCN^- , CN^- Ions	58
3.2.2.1	Principles	58
3.2.2.2	Construction	59
3.2.2.3	Preparation of Solid-State Membrane Electrodes Based on Ag_2S	61
3.2.2.4	Characteristics	61
3.2.2.5	Handling	68
3.2.2.6	Sample Preparation	69
3.2.3	Heterogeneous Solid-State Membrane Electrodes For Ag^+ , Cl^- , Br^- , I^- , CN^- , SCN^- , S^{2-} Ions	74
3.2.3.1	Construction	74
3.2.3.2	Preparation	75
3.2.3.3	Characteristics	75
3.2.3.4	Handling	77
3.3	Porous and Nonporous Supported Ion Exchanger and Neutral Carrier Membrane Electrodes	77
3.3.1	Ion-Exchangers For Ca^{2+} , Me^{2+} Cations and Cl^- , ClO_4^- , NO_3^- , BF_4^- Anions . . .	77
3.3.2	Neutral Carrier Compounds For Li^+ , Na^+ , K^+ , Rb^+ , Cs^+ , NH_4^+ , NR_4^+ , Ca^{2+} and Ba^{2+} Cations .	79
3.3.3	Construction	80
3.3.4	Preparation of PVC Membrane Electrodes	82
3.3.5	Characteristics	82
3.3.6	Handling	87
3.3.7	Further Electro-Active Phases	87
3.4	Solid State Electrodes with Electroactive Coatings	89
3.5	Gas Sensors For CO_2 , NH_3 , SO_2 , NO_2 , HF , H_2S , HCN , etc. . .	93
3.5.1	Principles	93
3.5.2	Construction	94
3.5.3	Characteristics of Gas-Sensitive Electrodes	95
3.5.4	Handling	97
3.5.5	Sample Preparation	97
3.6	Bio-Sensors	98
3.6.1	Principles	98
3.6.2	Construction	99
3.6.3	Preparation of Enzyme Electrodes	99
3.6.4	Characteristics of Bio-Sensors	102
3.6.5	Sample Preparation with Bio-Sensors	103
4	Measuring Techniques with Ion-Selective Electrodes	105
4.1	Equivalent Circuit for a Cell with Liquid Junction	105
4.2	Measuring the EMF of an Electrochemical Cell	108
4.3	Choosing an EMF Measuring Device	110
4.4	Characteristics of Electrometer Amplifiers	114

4.4.1	Resolving Power	114
4.4.2	Insulation Problems	116
4.4.3	Charging Phenomena	116
4.4.4	Ground Loops	119
5	Analysis Techniques Using Ion-Selective Electrodes	121
5.1	Calibration Curves	122
5.1.1	Determination of Activity Using an Activity Calibration Curve	122
5.1.2	Determination of Concentration Using a Concentration Calibration Curve	123
5.2	Direct Indication on the pH or pIon Scale of an Instrument	125
5.3	Titration Procedures for Determining Concentrations	127
5.3.1	Prerequisites	127
5.3.2	Titration Errors	128
5.3.3	Sample Preparation for Titrations	131
5.3.4	Titration to a Pre-determined EMF Value	132
5.3.4.1	On the Basis of a Titration Curve	132
5.3.4.2	On the Basis of a Concentration Cell Set-Up	133
5.3.5	“Chemically Linearized” Titration Curves (One Point Titration)	136
5.4	Concentration Determinations with the Help of a Standard Addition with a Known Electrode Slope S	137
5.4.1	Measuring the Change in EMF upon Addition of a Standard Solution to the Sample Solution	137
5.4.2	Measuring the Change in EMF upon Addition of the Sample Solution to a Standard Solution	140
5.5	Concentration Determinations with the Help of a Standard Addition with an Unknown Electrode Slope S	142
5.5.1	Method of Double Standard Addition	143
5.5.2	Method of Standard Addition with Subsequent Dilution	144
5.6	Practical Example of the Addition Method: Sodium and Potassium Determination in Blood Serum	145
5.7	Concentration Determinations with the Help of a “Mathematically Linearized” Titration Curve	147
5.8	Practical Example of the Gran Extrapolation Method: Determination of Chloride in the ppm Range	155
5.8.1	Principles	156
5.8.2	Preparatory Work	156
5.8.3	Blank Determination	157
5.8.4	Chloride Content Determination of the Sample Solution	157
5.9.	Determination of Some Characteristic Electrode Parameters	158
5.9.1	Determination of the Detection Limit	158
5.9.2	Determination of the Selectivity Coefficient	159
6	Applications of Ion-Selective Electrodes	162
6.1	Physiology, Biology, Medicine	162
6.1.1	Measurements in Extracellular Fluids	171

6.1.1.1	<i>In-vitro</i> Measurements	171
6.1.1.1.1	Sample Preparation	172
6.1.1.1.2	The Indicating Electrode	173
6.1.1.1.3	The Reference Electrode	173
6.1.1.2	<i>In-vivo</i> Measurements	174
6.1.2	Measurements of Intracellular Ion Activities	174
6.1.2.1	Preparation of Ion-Selective Microelectrodes	175
6.1.2.2	Guarded Signal Wires for Extremely High Ohmic Electrodes	176
6.1.2.3	Reference Microelectrodes	177
6.1.2.4	Special Amplifiers for Microelectrode Applications	178
6.2	Continuous Measurements in Industry and Environmental Research	179
6.2.1	Flow-thru Cells	180
6.2.1.1	Influence of Grounding	182
6.2.1.2	Influence of Temperature	183
6.2.1.3	Analysis Techniques with Flow-thru Measurements	186
6.2.1.4	Flow-thru Measurements without Reference Electrodes	186
6.2.1.4.1	Direct Potentiometry	187
6.2.1.4.2	Concentration Determination through Standard Solution Addition	187
6.2.1.4.3	Indirect Concentration Determination	188
6.2.1.4.4	The Cyanide Monitor as an Example of Industrial On-Line Measurements	188
6.2.2	Concentration Determination Via a Continuous Titration	191
Outlook		194
Appendix		197
A.1	Concentration, Activity and Activity Coefficient	197
A.1.1	Preparing Accurate Activity Calibration Solutions	199
A.2	Survey of the Temperature Dependence of Commonly Used Reference Electrodes	203
A.3	Table for Evaluation Using Analysis Technique 5.4.1	204
A.4	Table for Evaluation Using Analysis Technique 5.4.2	206
A.5	Table for Evaluation Using Analysis Technique 5.5.1	207
A.6	Table for Evaluation Using Analysis Technique 5.5.2	208
A.7	Evaluation Table for Standard Addition + 1:1 Dilution	209
A.8	Ion-Selective Electrode Manufacturers and/or Dealers	210
Literature		211
Subject Index		221
Index of Symbols Used		226
