

CONTENTS

URBAN, P., Opening Address	1
STREIT, L., The wondrous things: A review of probabilistic concepts in quantum dynamics	7
CHALLIFOUR, J.L., Schwinger functionals and Euclidean measures	45
EMCH, G.G., Non-equilibrium quantum statistical mechanics	79
FRÖHLICH, J., Phase transitions, Goldstone bosons and topological superselection rules	133
PARK, Y.M., Construction of $(\lambda\phi^4 - \sigma\phi^2 - \mu\phi)_3$ quantum field models	271
JEZUITA, K., The canonical structure of a classical theory, quantization procedures and non-equilibrium quantum statistical mechanics	323
THIRRING, W., Stability of matter	337
REEH, H., Summary - first week	355
SAKURAI, J.J., Phenomenology of neutral currents ...	359
GAILLARD, M.K., Neutrino interactions: How does charm fare?	365
KUMMER, W., Renormalization of nonabelian gauge fields	423
WESS, J., Supersymmetry	475
BUDINI, P., On dynamical symmetry breaking for leptons	499
VINCIARELLI, P., Soliton models of hadrons	521
RAYSKI, J., A claim for priority	569

VI

GRASSBERGER, P., Sum rules for elastic $\gamma\gamma$ scattering? Meson couplings to two photons, and the f-P relationship	571
KARPF, A.D., Gauge theory of dual resonance models and spontaneous breaking	591
MITTER, H., Meta-Summary - second week	629
