Mono- and Oligosaccharides and Acidic Monosaccharide Derivatives. By D. J. Bell	1
Introduction	1
A. Extraction of Tissues	2
1. Aqueous Extraction of Freshly Gathered Material	3
2. 70% Ethanolic Extraction of Forage Plants	3
3. 80% Ethanolic Extraction of White Potato	3
B. Elimination of Interfering Substances from Plant Tissue Extracts	4
I. Examination of Lead and Charcoal Methods	4
II. Purification by Ion-Exchange Resins	5
C. Qualitative Analysis of Carbohydrates in 80% Ethanolic Plant Extracts by Paper Chromatography	7
I. Introductory	7
II. Qualitative Paper Chromatography	7
III. Typical Chromatography Data for Saccharides	14
IV. Paper Chromatography of Oligosaccharides	15
V. Some Recent (1953) Findings on Plant Materials Made through Paper Chromatography	16
D. Electrophoretic Separation of Non-ionic Sugars	17
I. Introduction	17
II. Separation of Monosaccharides	17
III. Separation of Disaccharides	18
E. Quantitative Paper Chromatography	19
I. Introduction: General Points of Technique	19
II. A Direct Colorimetric Method for Reducing Sugars	20
III. The Nelson Colorimetric Method for Reducing Sugars	20
IV. Colorimetric Determination of Reducing Sugars and Furanosidic Non-reducing Sugars by Benzidine and Acetic Acid	21
V. Colorimetric Determination of Hexuloses, Free or Combined	21
VI. Colorimetric Determination of Reducing and Non-reducing Saccharides	22
VII. Titrimetric Determination of Aldoses	22
F. Separation of Saccharides by Column Chromatography	22
I. Introduction	22
II. Charcoal Columns	23
III. Cellulose Columns: Separation of Monosaccharides	25
IV. Starch Columns: Separation of Monosaccharides	26
V. Quantitative Analysis of Saccharides Using Strongly Basic Ion-exchange Resins and Borate Buffers of Various pH's	26
VI. Some Recent Discoveries of New Natural Compounds with the Aid of Column Chromatography	27
G. Hydrolysis of Glycosidic Links by Acid	28
I. Introductory	28
II. Suitable Conditions for Hydrolysis	28
III. Neutralisation of the Hydrolysate	29
IV. Side Reactions which may Complicate Analyses	30
H. Identifications of Monosaccharides	30
I. Introduction	30
II. Iso-propylidene Derivatives	32
III. Preparation of Isopropylidene Derivatives	32
IV. 2:5-Dichlorophenylhydrazones	33
V. Toluene-p-sulphonylhydrazones	34
VI. Miscellaneous Useful Derivatives of Monosaccharides	34
J. Quantitative Determinations of Saccharides	37
I. Introductory	37
II. Colorimetric Determination of Saccharides, Reducing and Non-reducing	37

III. Stoichiometric Titrimetric Methods	38
IV. Non-Stoichiometric Methods	41
K. Acidic Monosaccharide Derivatives	44
I. Occurrence of "Sugar Acids"	44
II. Aldoheonic Acids	45
III. Oxaldonic Acids	46
IV. Uronic Acids	47
