|                                                             |    |
|-------------------------------------------------------------|----|
| General considerations .....                                | 1  |
| 1. Aim and development of food preservation .....           | 2  |
| 1.1 Food spoilage: definition and controlling factors ..... | 2  |
| 1.2 Definition of and processes for food preservation ..... | 3  |
| 1.3 The need for food preservation .....                    | 4  |
| 1.4 History of chemical food preservation .....             | 5  |
| 1.5 Literature .....                                        | 8  |
| 2. Analytical detection of preservatives .....              | 9  |
| 2.1 Qualitative determination .....                         | 9  |
| 2.2 Quantitative determination .....                        | 10 |
| 2.3 Purity requirements .....                               | 10 |
| 2.4 Literature .....                                        | 10 |
| 3. Health aspects .....                                     | 11 |
| 3.1 General aspects .....                                   | 11 |
| 3.2 Acute toxicity .....                                    | 13 |
| 3.3 Subchronic toxicity .....                               | 13 |
| 3.4 Chronic toxicity .....                                  | 14 |
| 3.5 Carcinogenicity .....                                   | 15 |
| 3.6 Mutagenicity .....                                      | 16 |
| 3.7 Teratogenicity .....                                    | 16 |
| 3.8 Biochemical behavior .....                              | 17 |
| 3.9 Acceptable daily intake .....                           | 17 |
| 3.10 Preservative mixtures .....                            | 19 |
| 3.11 Literature .....                                       | 20 |
| 4. The legal situation relating to food .....               | 22 |
| 4.1 Historical development in former times .....            | 22 |
| 4.2 Positive lists system .....                             | 23 |
| 4.3 Recent efforts at international level .....             | 23 |
| 4.4 Guidelines to the granting of approval .....            | 27 |
| 4.5 Literature .....                                        | 28 |
| 5. Antimicrobial action of preservatives .....              | 29 |
| 5.1 General mechanism of action .....                       | 29 |
| 5.1.1 Inhibitory and destructive actions .....              | 29 |
| 5.1.2 Action on the microbial cell .....                    | 31 |
| 5.2 Antimicrobial spectrum of preservatives .....           | 32 |
| 5.3 Acquired resistance to preservatives .....              | 32 |

|       |                                                                           |    |
|-------|---------------------------------------------------------------------------|----|
| 5.4   | Combinations of preservatives with one another .....                      | 35 |
| 5.4.1 | Broader spectrum of action .....                                          | 35 |
| 5.4.2 | Changes in antimicrobial action .....                                     | 36 |
| 5.5   | Combination of preservatives with physical measures .....                 | 39 |
| 5.5.1 | Combination of preservatives with the use of heat ..                      | 41 |
| 5.5.2 | Combination of preservatives with refrigeration<br>treatment .....        | 41 |
| 5.5.3 | Combination of preservatives with irradiation .....                       | 41 |
| 5.6   | Preservation against toxin-forming microorganisms .....                   | 42 |
| 5.7   | Influences of substrate factors on the action of preser-<br>vatives ..... | 42 |
| 5.7.1 | Influence of the pH value .....                                           | 43 |
| 5.7.2 | Influence of the partition coefficient .....                              | 45 |
| 5.7.3 | Influence of the water activity.....                                      | 46 |
| 5.7.4 | Influence of other physico-chemical substrate<br>factors .....            | 46 |
| 5.7.5 | Influence of food ingredients .....                                       | 46 |
| 5.8   | Decomposition of preservatives .....                                      | 48 |
| 5.9   | Test methods for preservatives .....                                      | 49 |
| 5.9.1 | Nutrient medium test .....                                                | 49 |
| 5.9.2 | Practical trials .....                                                    | 49 |
| 5.10  | Literature .....                                                          | 50 |
|       | The individual preservatives .....                                        | 57 |
| 6.    | Sodium chloride .....                                                     | 59 |
| 6.1   | Synonyms.....                                                             | 59 |
| 6.2   | History .....                                                             | 59 |
| 6.3   | Commercially available forms .....                                        | 60 |
| 6.4   | Properties, analysis .....                                                | 60 |
| 6.5   | Production .....                                                          | 60 |
| 6.6   | Health aspects .....                                                      | 60 |
| 6.6.1 | Acute toxicity .....                                                      | 60 |
| 6.6.2 | Subchronic toxicity .....                                                 | 61 |
| 6.6.3 | Chronic toxicity .....                                                    | 61 |
| 6.6.4 | Biochemical behavior .....                                                | 61 |
| 6.7   | Regulatory status .....                                                   | 61 |
| 6.8   | Antimicrobial action .....                                                | 61 |
| 6.8.1 | General criteria of action .....                                          | 61 |
| 6.8.2 | Spectrum of action .....                                                  | 63 |
| 6.9   | Fields of use .....                                                       | 63 |
| 6.9.1 | Fat products .....                                                        | 63 |
| 6.9.2 | Dairy produce .....                                                       | 64 |
| 6.9.3 | Egg products .....                                                        | 64 |
| 6.9.4 | Meat products .....                                                       | 65 |
| 6.9.5 | Fish products .....                                                       | 65 |
| 6.9.6 | Vegetable products .....                                                  | 66 |
| 6.9.7 | Fruit products .....                                                      | 67 |
| 6.10  | Side effects .....                                                        | 67 |
| 6.11  | Literature .....                                                          | 68 |
| 7.    | Silver .....                                                              | 70 |
| 7.1   | Synonyms .....                                                            | 70 |
| 7.2   | History .....                                                             | 70 |

|      |                                                 |    |
|------|-------------------------------------------------|----|
| 7.3  | Properties, analysis .....                      | 70 |
| 7.4  | Health aspects .....                            | 71 |
| 7.5  | Regulatory status .....                         | 71 |
| 7.6  | Antimicrobial action .....                      | 71 |
|      | 7.6.1 General criteria of action .....          | 71 |
|      | 7.6.2 Spectrum of action .....                  | 71 |
| 7.7  | Fields of use .....                             | 72 |
