

Contents

Abbreviations	XI
1. Introduction	1
2. A Historical Survey of Extra-Intracranial Anastomosis	3
3. Epidemiology of Stroke	5
4. Anatomy and Pathophysiology	7
4.1. The Superficial Temporal Artery	7
4.2. The Occipital Artery	13
4.3. The Carotid Artery	14
4.4. The Middle Cerebral Artery	16
4.5. Physiological Arterial Anastomoses and Collateral Circulation	20
5. Experimental Surgery	22
5.1. Microvascular Anastomoses on the Common Carotid Artery of the Rat	22
5.1.1. End-to-End Anastomosis	22
5.1.2. End-to-Side Anastomosis	26
5.2. Experimental Studies in Dogs	26
5.3. Conclusion	29
6. Pathophysiology of Microanastomoses	30
6.1. Histological Changes in Microvascular Anastomoses	30
6.2. Causes of Stenoses and Occlusions in Microsurgical Anastomoses	34
6.3. Relationship Between Suturing Technique, Pathohistology, and Blood Flow	38
7. Preoperative Diagnostic Procedures	42
7.1. Neurology and Neuropsychology	42
7.2. EEG	44
7.3. Doppler Sonography	44
7.4. Ophthalmodynamography	45
7.5. Cerebral Scintigraphy	45
7.6. Angiography	46
7.7. Regional Cerebral Blood Flow Measurement	48
7.8. Computerized Tomography	52
7.9. Conclusion	58
8. Timing of the Operation	59
9. Operative Technique	61
9.1. Exposure of the Superficial Temporal Artery	62
9.2. Exposure of the Cortical Vessel	69
9.3. The Anastomosis	74
9.4. Intraoperative Diagnostic Procedures	80
9.5. Intra- and Postoperative Complications	81
10. Postoperative Examinations	83
10.1. Conclusion	88
11. Indications for Extra-Intracranial Bypass Procedure:	
Pathological-Anatomical Considerations	89
11.1. Occlusion of the Internal Carotid Artery	89
11.1.1. Extracranial Portion	89
11.1.2. Intracranial Portion	92

11.2.	Stenoses of the Internal Carotid Artery	92
11.3.	Occlusion of the Middle Cerebral Artery	95
11.4.	Stenosis of the Middle Cerebral Artery	98
11.5.	Occlusions and Stenoses in the Vertebrobasilar Region	100
11.6.	Multiple Vascular Lesions	101
11.6.1.	Carotid Occlusion and Contralateral Carotid Stenosis	102
11.7.	Moya-Moya Syndrome	104
11.8.	Vascular Malformations.	107
11.8.1.	Aneurysms	107
11.8.2.	Angiomas	107
11.9.	Other Indications	109
11.10.	Traumatic Vascular Lesions	111
12.	Indications for Extra-Intracranial Bypass Procedure:	
	Clinical Aspects	112
12.1.	Transient Ischemic Attacks (Transient Cerebral Ischemia)	112
12.1.1.	Preoperative Examinations	113
12.1.2.	Conclusion (Preoperative Examinations in TIA).	115
12.1.3.	Timing of Operation	115
12.1.4.	Results of Operation and Postoperative Examinations	116
12.1.5.	Conclusion (TIA and Bypass Operation)	117
12.2.	Prolonged Reversible Ischemic Neurological Deficit (PRIND or RIND).	117
12.3.	Completed Stroke	117
12.3.1.	Preoperative Examinations	119
12.3.2.	Conclusion of the Preoperative Examinations (Completed Stroke)	121
12.3.3.	Results of Operation and Postoperative Examinations of Cases With Completed Stroke	123
12.3.4.	Conclusion (Completed Stroke and Bypass Operation).	126
12.4.	Progressive Stroke (Stroke in Evolution)	127
12.5.	Generalized Low-Perfusion Syndrome	128
13.	Changes of Blood Flow Following Extra-Intracranial Bypass Procedure	130
14.	Postoperative Mortality and Morbidity	143
15.	Considerations for the Future	145
15.1.	Gluing of Microanastomoses	145
15.2.	Microanastomoses in the Spinal Cord Region	148
15.2.1.	End-to-Side Anastomosis Between an Intercostal Artery Branch and a Dorsal Spinal Artery	148
15.2.2.	Pedicled Muscle Grafting Onto the Spinal Cord	149
	References	152
	Subject Index	167
