Preface XIII

List of Contributors XXI

Part I Self Assembly 1

- 1 Yoctoliter-Sized Vessels as Potential Biological Models** 3
Sheshanath V. Bhosale, Bradley E. Wilman, and Steven J. Langford
 - 1.1 Introduction 3
 - 1.2 Cavities on Glass Plates and Gold Surfaces 5
 - 1.3 Preparation and Confirmation of Rigid Yoctowell Cavity 6
 - 1.3.1 Confirmation of Rigid Gaps 7
 - 1.4 Molecular Sorting 7
 - 1.5 Yoctowell-Based Molecular Recognition Events 9
 - 1.6 Conclusion 11

Acknowledgments 12
References 12
- 2 Switchable Host–Guest Interactions of Supramolecular Rings and Cages** 13
Guido H. Clever
 - 2.1 Introduction 13
 - 2.2 Host–Guest Chemistry 15
 - 2.3 Switching in Supramolecular Systems 17
 - 2.4 Natural Paragons 19
 - 2.5 Types of External Input and Methods for Analysis 20
 - 2.5.1 Switchable Host Compounds 21
 - 2.5.2 Switchable Guest Compounds 26
 - 2.6 Conclusion 33

References 34

Part II NanoMaterials 39

3	Tailored Graphene-Type Molecules by Chemical Synthesis	41
	<i>Milan Kivala and Xinliang Feng</i>	
3.1	Introduction	41
3.2	Synthetic Concepts toward Expanded PAHs – Nanographenes	43
3.2.1	Hexabenzocoronenes (HBCs) and Related Systems	43
3.2.2	Large PAHs	48
3.2.3	Graphene Nanoribbons	55
3.2.4	Heteroatom-Containing PAHs	60
3.3	Conclusion and Outlook	64
	References	66
4	Analyzing the Surface Area Properties of Microporous Materials	71
	<i>Abbie Trewin</i>	
4.1	Introduction	71
4.1.1	Energy	71
4.1.2	H ₂ Storage	71
4.1.3	CO ₂ Capture and Sequestration	72
4.1.4	Gas Separation	73
4.2	Microporous Materials	74
4.2.1	Framework Materials	74
4.2.2	Network Materials	74
4.2.3	Molecular Materials	76
4.2.4	Structural Flexibility	79
4.3	Porosity	81
4.3.1	What Is Porosity?	81
4.3.2	Intrinsic versus Extrinsic Porosity	81
4.3.3	Measuring Porosity	82
4.3.4	Calculated Surface Areas and Simulated Gas Uptakes	83
4.3.5	Gas-Diffusion Mechanisms	84
4.4	Porous Materials and Calculating Surface Areas	85
4.4.1	Framework Materials	85
4.4.2	Network Materials	86
4.4.3	Molecular Materials	88
4.4.4	Molecular Solids with Some Extrinsic Porosity	89
4.4.5	Molecular Solids with Intrinsic Porosity	90
4.5	Summary	92
	Acknowledgments	92
	References	93
5	Nanostructured Materials Based on Core-Substituted Naphthalene Diimides	97
	<i>Sheshanath V. Bhosale, Bradley E. Wilman, and Steven J. Langford</i>	
5.1	Introduction	97

5.2	Synthesis of Novel cNDI Derivatives	99
5.3	Electron Transfer	102
5.4	Supramolecular Self-Assembly of cNDI	105
5.5	Conclusion	110
	Acknowledgments	110
	References	110
6	Metal Phosphides: From Chemist's Oddities to Designed Functional Materials	113
	<i>Sophie Carenco, Matthieu Demange, Cédric Boissière, Clément Sanchez, and Nicolas Mézailles</i>	
6.1	Introduction	113
6.2	Bulk Metal Phosphides: A Long History	113
6.2.1	A New Family of Synthetic Inorganic Materials	113
6.2.2	First Set of Applications	114
6.2.3	Bulk Metal Phosphides and Today's Applications	114
6.3	White Phosphorus for the Low-Temperature Synthesis of Metal Phosphide Nanoparticles	115
6.3.1	White Phosphorus as a Low-Temperature Reagent	115
6.3.2	Aryl- and Alkyl-Phosphines as "P" Atom Donor in Harsh Conditions for the Synthesis of Metal Phosphide Nanoparticles	115
6.3.3	Nickel Phosphide Nanoparticles from P ₄ in Stoichiometric and Mild Conditions	116
6.3.4	Generalization of the White Phosphorus Nanoscale Route	118
	References	119
7	"Artificial Supermolecule": Progress in the Study of II–V Colloidal Semiconductor Nanocrystals	121
	<i>Shiding Miao, Alexander Eychmüller, and Stephen G. Hickey</i>	
7.1	Introduction	121
7.2	Optical Properties of II–V Nanocrystals	124
7.2.1	Absorption	124
7.2.2	Photoluminescence	127
7.2.3	Lifetime Measurement	131
7.3	Synthesis of II–V Nanocrystals	133
7.3.1	Synthesis Methods	133
7.3.2	Synthesis of Cd ₃ P ₂ Nanocrystals	134
7.3.2.1	"Hot-Injection" Synthesis	134
7.3.2.2	High-Temperature, Gas-Bubbling Synthesis with <i>Ex Situ</i> -Produced PH ₃	139
7.3.3	Synthesis of Zn ₃ P ₂ Nanocrystals	140
7.3.4	Synthesis of Cd ₃ As ₂ Nanocrystals	142
7.3.5	Summary of the Synthesis of II–V Nanocrystals	143
7.4	Conclusions and Outlook	143
	References	146

8	Luminescent Dendrimers	155
	<i>Giacomo Bergamini</i>	
8.1	Introduction	155
8.2	Intrinsic Photochemical and Photophysical Properties of Organic Dendrimers	156
8.3	Energy Transfer and Energy Upconversion in Multichromophoric Dendrimers	161
8.4	Dendrimers as Ligands for Metal Ions	164
8.5	Self-Assembly	168
8.6	Dendrimers as Photoswitchable Hosts	170
8.7	Conclusion and Perspectives	172
	References	173
9	Fabrication of Ultramicroporous Silica Membranes for Pervaporation and Gas Separation	177
	<i>Vittorio Boffa</i>	
9.1	Ultramicroporous Silica Membranes	177
9.1.1	Context	177
9.1.2	Gas Separation and Pervaporation	177
9.1.3	Fabrication	180
9.1.4	Microporosity Assessment in Silica Membranes	182
9.1.5	Hydrothermal Stability–Instability of Microporous Silica	184
9.2	M _x O _y –Silica Membrane	185
9.2.1	Fabrication	185
9.2.2	Stability, Selectivity, and Reactivity	187
9.2.3	Membrane Optimization	193
9.3	Hybrid Organic-Silica Membranes	193
9.3.1	Fabrication	193
9.3.2	“Hydrophobic” Silica Membranes	196
9.3.3	Membranes from Bridged Organosilanes	197
9.3.4	Organic-Silica Membranes for CO ₂ Separation	199
9.4	Perspectives in the Fabrication and Application of Silica Membranes	200
	References	200
10	New Directions in the Fight against Cancer: From Metal Complexes to Nanostructured Materials	207
	<i>Santiago Gómez-Ruiz</i>	
10.1	Introduction	207
10.2	Metal Complexes in Cancer Treatment	208
10.2.1	Platinum Complexes	208
10.2.2	Non-Platinum Transition-Metal Complexes	210
10.2.2.1	Group 4 Metal Complexes	211
10.2.2.2	Group 8 Metal Complexes	213

10.2.2.3	Group 11 Metal Complexes	216
10.2.3	Main Group-Metal Complexes	219
10.2.3.1	Gallium Complexes	219
10.2.3.2	Tin Complexes	220
10.3	Nanostructured Materials in Cancer Treatments	221
10.3.1	Macromolecular Systems	222
10.3.1.1	Cucurbit[n]urils and Cyclodextrins	222
10.3.1.2	Liposomes and Lipid Nanocapsules	223
10.3.1.3	Other Macromolecular Systems	224
10.3.2	Ceramic Materials	224
10.3.2.1	Nanostructured Calcium-Phosphate-Based Materials Functionalized with Metal Complexes	226
10.3.2.2	Mesoporous Silicas Functionalized with Metal Complexes	227
10.3.2.3	Carbon Nanotubes Functionalized with Metal Complexes	228
10.3.3	Nanoparticles	230
	References	230

Part III Molecular Machinery 243

11	Molecular Rotors: Imaging Intracellular Viscosity	245
	<i>Marina K. Kuimova</i>	
11.1	Introduction	245
11.2	Theoretical Background	246
11.3	Biological Applications of Molecular Rotors	247
11.3.1	Fluorescence-Lifetime-Based Molecular Rotors	249
11.3.2	Time-Resolved Fluorescence Anisotropy Measurements of Molecular Rotors	252
11.3.3	Ratiometric Fluorescent Molecular Rotors	255
11.3.4	Ratiometric Molecular Rotor Measurements of Viscosity during PDT	257
11.4	Conclusions and Outlook	258
	Acknowledgments	259
	References	259
12	Surface-Functionalized Inorganic Colloidal Nanocrystals in Functional Nanocomposite Materials for Microfabrication	263
	<i>Chiara Ingrosso, Marinella Striccoli, Angela Agostiano, and Maria Lucia Curri</i>	
12.1	Introduction	263
12.2	Colloidal Nanocrystals: Properties, Synthesis, and Surface Functionalization	264
12.2.1	Properties of Nanocrystals	264
12.2.2	Colloidal Synthesis of Nanocrystals	265
12.2.3	Surface Functionalization of Nanocrystals	266
12.3	NC-Based Nanocomposites for Microfabrication	269

12.4	Conclusions and Future Perspectives	279
	References	280
13	Fluorescence Sensing of Temperature and Oxygen with Fullerenes	285
	<i>Mário N. Berberan-Santos and Carlos Baleizão</i>	
13.1	Introduction	285
13.2	Thermally Activated Delayed Fluorescence: Fundamental Aspects	287
13.3	Sensing Applications	292
13.3.1	Oxygen Sensing	293
13.3.1.1	Sub-ppm Oxygen Sensor Based on C ₇₀	294
13.3.1.2	C ₇₀ in a Dual Sensor System	297
13.3.2	Temperature Sensing	300
13.3.2.1	C ₇₀ Dispersed in Polymer Films	302
13.3.2.2	C ₇₀ Encapsulated in Polymer Nanoparticles	304
13.4	Conclusions and Future Perspectives	307
	Acknowledgments	308
	References	308
14	Going beyond Glucose Sensing with Boronic Acid Receptors	315
	<i>Alexander Schiller</i>	
14.1	Introduction	315
14.2	Indicator Displacement Assays for the Detection of Sugars	316
14.3	Glucose Sensing with Boronic Acid Receptors	317
14.3.1	Allosteric Indicator Displacement Assay for the Detection of Carbohydrates	318
14.3.2	AIDA Saccharide Sensing System – Boronic-Acid–Appended Benzyl Bipyridinium Salts and a Fluorescent Reporter Dye	319
14.3.3	AIDA Glucose Sensor for Continuous Monitoring	320
14.4	Solution-Phase Sensor Arrays with Boronic-Acid-Appended Bipyridinium Salts	321
14.4.1	Recognition of Neutral Saccharides	322
14.4.2	Recognition of Phosphosugars and Nucleotides	324
14.5	Carbohydrate-Active Enzyme Assays	327
14.6	Boronic-Acid-Appended Bipyridinium Salts at Work – NOVOSIDES	330
14.7	Conclusions and Perspectives	333
	Acknowledgments	334
	References	334
15	Design of Novel Iridium Complexes to Obtain Stable and Efficient Light-Emitting Electrochemical Cells	339
	<i>Rubèn D. Costa</i>	
15.1	Brief History of Electroluminescence and Optoelectronic Devices	339
15.2	Light-Emitting Electrochemical Cells: Motivation and Definition	340

15.3	Ionic Transition-Metal Complexes Based on Ir(III) Metal Core for LECs	343
15.4	Strategies to Design Iridium(III) Complexes for Highly Efficient LECs	346
15.5	Strategies to Design Iridium(III) Complexes for Highly Stable LECs	350
15.6	Outlook and Conclusions	356
	Acknowledgments	357
	References	357
16	Photochemically Driven Molecular Devices and Machines	361
	<i>Serena Silvi</i>	
16.1	Introduction	361
16.1.1	Features of Molecular Devices and Machines	361
16.2	Switches and Logic Gates	363
16.3	Molecular Machines	369
16.3.1	Threading–Dethreading Motions	371
16.3.2	Molecular Shuttles	375
16.4	Conclusions	380
	Acknowledgments	381
	References	381
	Index	385
