1. <i>Introduction</i>	
By K.A. Müller (With 2 Figures)	1
References	8
2. <i>Optical Studies of Structural Phase Transitions</i>	
By P.A. Fleury and K. Lyons (With 26 Figures)	9
2.1 Background	9
2.1.1 Phase Transitions in Solids: Definitions	10
2.1.2 Symmetry Classification of Optical Techniques	12
2.2 Experimental Techniques	15
2.2.1 Absorption and Fluorescence	15
a) IR Absorption and Reflection	15
b) Optical Absorption and Fluorescence	17
2.2.2 Birefringence	18
a) Typical Experimental Apparatus	19
2.2.3 Light Scattering	20
a) General Background	21
b) Scattering from Coupled Modes	23
c) Critical Exponents and Soft Mode Spectra	24
d) Intensity of Scattering	25
e) Grating Spectroscopy	26
f) Interferometry	27
g) Recent Advances of Technique	28
2.3 Ferroelastic Transitions	30
2.3.1 Cooperative Jahn-Teller Systems	31
2.3.2 PrAlO_3 : A Prototypical CJT System	32
2.4 Nonpiezoelectric Ferroelectric: $\text{Pb}_5\text{Ge}_3\text{O}_{11}$	35
2.5 Piezoelectric-Ferroelectric Transition in KDP and Its Isomorphs	39
2.5.1 Coupled Modes in the Raman Spectrum	40
2.5.2 Brillouin-Raman Spectra	41
2.5.3 Static and Dynamic Central Peaks	42

2.6	Zone Boundary Phase Transitions (Antiferrodistortive)	44
2.6.1	Systematics in the Fluoroperovskites	45
2.6.2	Recent Results in SrTiO_3	46
2.7	Zone Boundary Ferroelectrics: The Molybdates	49
2.8	Incommensurate Phase Transitions	52
2.8.1	Charge-Density Waves: TaSe_2	54
2.8.2	Incommensurate-Ferroelectric: K_2SeO_4	56
2.8.3	Ferroelectric-Antiferroelectric: BaMnF_4	57
2.9	Nonlinear Optical Studies of Phase Transitions	59
2.10	Renormalization Group Theory and Multicritical Phenomena	61
2.11	Concluding Remarks	64
	References	65
	Bibliography	69
3.	<i>Investigation of Structural Phase Transformations by Inelastic Neutron Scattering</i>	
	By B. Dorner (With 22 Figures)	93
3.1	Inelastic Neutron Scattering	94
3.1.1	General Aspects	94
3.1.2	Structural Changes with Small Displacements	95
3.1.3	Soft Modes	97
3.2	The Central-Peak Phenomenon	99
3.3	Molecular Crystals	104
3.3.1	The Elastic Incoherent Structure Factor (EISF)	104
3.3.2	High-Resolution Instruments	107
	a) The Backscattering Spectrometer	107
	b) The Four Chopper Time-of-Flight Spectrometer	108
	c) The Neutron Spin-Echo Spectrometer	108
3.3.3	Dynamics of Molecular Crystals	109
	a) Librations	110
	b) Rotational Reorientation of a Single Molecule	112
	c) Translational Lattice Vibrations	114
	d) Soft Modes and Relaxation of Clusters	116
3.4	Incommensurable Structures	118
3.4.1	Amplitude and Phase Modes	119
3.4.2	Conducting Materials	122
3.4.3	Insulating Materials	124
	References	128
	Additional References with Titles	130

4. <i>Ultrasonic Studies Near Structural Phase Transitions</i>	
By B. Lüthi and W. Rehwald (With 11 Figures)	131
4.1 Background Material	131
4.1.1 Elastic Response Functions and Their Measurement	131
a) Pulse Method	132
b) CW Methods	132
c) Low-Frequency Methods	133
4.1.2 Connection to Processes Characterizing the Phase Transition	134
4.2 Theoretical Analysis	134
4.2.1 Landau Theory	135
4.2.2 Symmetry Aspects	137
4.2.3 Mode-Mode Coupling and Scaling	139
4.2.4 Renormalization Group Analysis	140
4.3 Experimental Results	142
4.3.1 Strain Is Order Parameter	143
a) Ferroelectrics	151
b) Other Nonelectronic Compounds	153
c) Cooperative Jahn-Teller Transitions	155
d) Band Jahn-Teller Transitions	162
e) Mixed Valence Transitions	166
f) Martensitic Phase Transformations	167
4.3.2 Strain Is Not Order Parameter	168
a) Phonon Coordinate Is Order Parameter	168
b) Electric Polarization Is Order Parameter	172
c) Orientational Degree of Freedom Is Order Parameter ...	175
d) Charge-Density Wave Transitions	176
e) Solid Electrolytes	177
f) Incommensurate Phases	178
4.4 Summary	178
References	179
Additional References with Titles	184
<i>Subject Index</i>	185
