

Contents

1. <i>Introduction</i> . By W.A. Phillips (With 1 Figure)	1
1.1 Historical Background	1
1.2 Tunneling States	4
1.2.1 Energy Levels	4
1.2.2 Transition Probabilities and Relaxation Times	7
1.3 Organization of the Book	11
References	12
2. <i>The Vibrational Density of States of Amorphous Semiconductors</i> By D.L. Weaire (With 9 Figures)	13
2.1 The Vibrational Density of States	13
2.2 Experimental Techniques	14
2.3 The Theoretical Problem	15
2.4 Brute Force Theory	17
2.4.1 Turning the Handle	17
2.4.2 Some Results of Brute Force	18
2.5 More Refined Approaches	20
2.5.1 Analytical Ideas	20
2.5.2 The Bethe Lattice	20
2.5.3 Indirect Numerical Methods	21
2.6 The Incorporation of Matrix Elements	24
2.7 Can One Derive Structural Information from $g(\omega)$?	24
2.8 A Less Myopic View of the Field	25
References	26
3. <i>Low Temperature Specific Heat of Glasses</i> By R.O. Pohl (With 17 Figures)	27
3.1 Review of the Experimental Situation	27
3.2 Comparison with Theoretical Models	38
3.2.1 The Tunneling Model	38
3.2.2 The Cellular Model	43
3.3 Summary and Outlook	50
References	51

4. <i>The Thermal Expansion of Glasses</i> . By W.A. Phillips (With 3 Figures) ..	53
4.1 Theoretical Background	54
4.2 The High Temperature Expansion of Vitreous Silica	56
4.3 The Low Temperature Expansion of Glasses	58
4.3.1 Experimental Results	58
4.3.2 Discussion	61
References	63
5. <i>Thermal Conductivity</i> . By A.C. Anderson (With 5 Figures)	65
5.1 Thermal Transport in Crystalline Materials	65
5.2 Thermal Transport in Amorphous Materials	67
5.2.1 The Phonon Mean Free Path	68
5.2.2 Phonon Scattering Mechanisms	71
5.2.3 Summary	74
5.3 Probing the Localized Excitations	75
5.4 Synopsis	78
References	78
6. <i>Acoustic and Dielectric Properties of Glasses at Low Temperatures</i> By S. Hunklinger and M. v. Schickfus (With 17 Figures)	81
6.1 General Comments	81
6.2 Acoustic and Dielectric Properties Above 10 K	81
6.2.1 Absorption	81
6.2.2 Sound Velocity and Dielectric Constant	85
6.3 Acoustic and Dielectric Properties Below 10 K	87
6.3.1 Acoustic and Dielectric Absorption	87
a) Relaxation Effects	87
b) Resonant Interaction	88
6.3.2 Sound Velocity and Dielectric Constant	91
6.3.3 Acoustic Dielectric "Cross"-Experiments	93
6.4 Theoretical Description of the Acoustic and Dielectric Properties by Two-Level Systems	93
6.4.1 Dynamical Properties of Two-Level Systems	94
6.4.2 Absorption Due to a Distribution of Two-Level Systems	96
6.4.3 Variation of Sound Velocity and Dielectric Constant	98
6.5 Comparison Between Theory and Experiment	99
6.6 Microscopic Description: Tunneling Model	101
6.7 Summary	102
References	103

7. <i>Relaxation Times of Tunneling Systems in Glasses</i>	
By B. Golding and J.E. Graebner (With 10 Figures)	107
7.1 Background	107
7.2 Resonance Dynamics of Two-Level Systems	109
7.2.1 Tunneling Model	113
7.2.2 Longitudinal Relaxation Time T_1	114
a) One-Phonon Relaxation	115
b) Conduction Electron Relaxation	116
7.2.3 Transverse Relaxation Time T_2'	117
7.2.4 Spontaneous Echo Decay	118
7.2.5 Stimulated Echo Decay	119
7.3 Experiments Measuring Relaxation Times	121
7.3.1 Acoustic Saturation	121
7.3.2 Saturation Recovery	121
7.3.3 Linewidth	122
7.3.4 Two-Pulse Phonon Echo	124
7.3.5 Two-Pulse Electric Echo	124
7.3.6 Three-Pulse Phonon Echo	126
7.3.7 Three-Pulse Electric Echo	127
7.4 Critical Assessment of Data	127
7.4.1 T_1 Results	127
a) Three-Pulse Echoes	127
b) Saturation Recovery	128
c) Distribution of Decay Times	129
7.4.2 T_2' Results	130
a) Two-Pulse Echoes	130
b) Linewidth	131
7.5 Conclusions	132
References	133
8. <i>Low Frequency Raman Scattering in Glasses</i>	
By J. Jäckle (With 10 Figures)	135
8.1 Introductory Comments	135
8.2 Vibrational Raman Spectrum of First Order	135
8.2.1 Experimental Results	135
8.2.2 Theory of Low-Frequency Spectrum	140
a) Continuum Theory	140
b) Bond Polarizability Model	144
8.3 Quasielastic Spectrum	147
8.3.1 Experimental Results	147
8.3.2 Theory	151

a) Physical Origin of the Quasielastic Scattering	151
b) Relation Between Raman Scattering and Ultrasonic Absorption	154
c) Defect Model	155
8.4 Conclusion	158
References	159
