Part I Basic Features of Non-centrosymmetric Superconductors

1	Non-centrosymmetric Superconductors: Strong vs. Weak Electronic Correlations	3
1.1	Introduction	3
1.2	Superconductivity of Strongly Correlated Electron Systems Without Inversion Symmetry	5
1.2.1	Ternary CePt_3Si	5
1.2.2	Ternary CeRhSi_3	8
1.2.3	Ternary CeIrSi_3	11
1.3	Superconductivity of Materials Without Inversion Symmetry and Electronic Correlations	13
1.3.1	Sesquicarbides $R_2\text{C}_{3-y}$	14
1.3.2	Complex Metallic Alloy β' - Mg_2Al_3	16
1.3.3	Ternary BaPtSi_3	18
1.3.4	Ternary $\text{Li}_2(\text{Pd,Pt})_3\text{B}$ and $\text{Mo}_3\text{Al}_2\text{C}$	21
1.3.5	Pyrochlores $\text{A}_2\text{B}_2\text{O}_7$ and AB_2O_6	23
1.3.6	Binary $T_2\text{Ga}_9$, $T = \text{Rh, Ir}$	25
1.3.7	Ternary LaNiC_2	27
1.4	Summary	29
	References	29
2	Non-centrosymmetric Heavy-Fermion Superconductors	35
2.1	CePt_3Si	35
2.1.1	Crystal Structure, Sample Growth and Characteristic Parameters	36
2.1.2	Normal State	37
2.1.3	Superconducting State	38
2.2	CeTX_3 Compounds	44

2.2.1	Crystal Structure and Related Compounds	44
2.2.2	Normal State	45
2.2.3	Superconducting State	55
2.2.4	Outlook	65
2.3	UIr	67
2.3.1	Crystal Structure and Characteristic Parameters	68
2.3.2	Normal State	70
2.3.3	Superconducting State	71
2.4	Comparison of the Superconducting States of CePt ₃ Si, CeRhSi ₃ , CeIrSi ₃ , CeCoGe ₃ , CeIrGe ₃ and UIr	74
	References	75
3	Electronic States and Superconducting Properties of Non-centrosymmetric Rare Earth Compounds.	81
3.1	Introduction	81
3.2	Electronic States and Superconducting Properties of LaPt ₃ Si and CePt ₃ Si	87
3.3	Electronic States and Superconducting Properties of LaTX ₃ and CeTX ₃	98
3.4	Summary	123
	References	124
