### Table of Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Monomer Structures, Ring Strains and Nucleophilicities (Basicities)</b>	<b>3</b>
2.1.	Conformation of Heterocyclic Monomers	3
2.2	Factors Affecting Reactivities	5
<b>3</b>	<b>Initiation</b>	<b>8</b>
3.1	Protonic Acids	8
3.1.1	Protonic Acids with Complex Anions	10
3.1.2	Protonic Acids with Non-Complex Anions	10
3.1.3	Direct Identification of the Initiation Products (Initial Species)	12
3.2	Initiation with Stable Carbenium or Onium Ions and with Their Covalent Precursors (“Hidden Ions”)	15
3.2.1	Carbenium Ions	15
3.2.2	Carbenium Ion-Onium Ion Equilibria	17
3.2.3	Structure of Monomers and Rate of Hydride Transfer	17
3.2.4	Alkoxycarbenium Ions	20
3.2.5	1,3-Dioxolan-2-ylum (Dioxolenium) Salts	21
3.2.6	Oxocarbenium Ions	22
3.2.7	Onium Ions	24
3.2.8	Covalent Initiators (“Hidden Cations”)	26
3.2.9	Friedel-Crafts (F-C) Initiators	28
3.2.10	Cations Formed by Electron Transfer	30
3.2.11	Organometallic Initiators	32
3.3	Kinetics of Initiation	34
<b>4</b>	<b>Propagation</b>	<b>39</b>
4.1	Chemical Structure of the Growing Species	39
4.1.1	Active Species in the Polymerization of Cyclic Acetals	41
4.1.2	Polymerization of Cyclic Acetals Initiated by Protonic Acids	42

4.1.3	Polymerization of Cyclic Acetals Initiated by Preformed or "Hidden" Carbocations . . . . .	44
4.1.4	Carbenium or Oxonium Ions in the Polymerization of Cyclic Acetals? . . . . .	45
4.1.5	Carbenium-Oxonium Ion Equilibria Involving Alkoxycarbenium Ions . . . . .	45
4.1.6	Structure of Tertiary Oxonium Ions in the Polymerization of 1,3-Dioxolane . . . . .	46
4.1.7	Activated Monomer as Active Species in the Polymerization of Lactams . . . . .	48
4.1.8	The Steric and Electronic Structure of Onium Ions . . . . .	50
4.2	Macroions and Macroion Pairs in Propagation . . . . .	52
4.2.1	Determination of the Concentration of the Growing Species $[P^*]$ . . . . .	52
4.2.2	Dissociation of Macroion Pairs . . . . .	53
4.2.3	Propagation on Macroion Pairs with Different Anions . . . . .	56
4.2.4	Reactivities of Macroocations and Macroion Pairs . . . . .	58
4.2.5	Solvent Effects (Polarity, Solvation of Ions, Monomer Complexes) in Propagation . . . . .	61
4.2.5.1	Equilibria and Properties of Media . . . . .	61
4.2.5.2	Activation Parameters of Propagation and Properties of Media . . . . .	62
4.3	Rate Constants of Propagation and Structure of Monomers . . . . .	64
4.4	Stereochemistry of the Cationic Ring-Opening Propagation . . . . .	70
4.4.1	Inversion of Configuration and Stereoselectivity . . . . .	70
5	Termination and Transfer Processes . . . . .	77
5.1	Temporary (Reversible) Termination . . . . .	77
5.1.1	Reversible Recombination with Non-Complex Anions . . . . .	77
5.1.2	Competition Between Propagation of Covalent and Ionic Species . . . . .	80
5.1.3	Equilibria Between Covalent and Ionic Growing Species . . . . .	84
5.1.4	Equilibrium Between Covalent Macromolecules and Macroion Pairs in the Presence of Macroions . . . . .	87
5.1.5	The Rate of Interconversion of Covalent Macromolecules and Macroion Pairs . . . . .	88
5.1.6	Summary of the Kinetics of Propagation Involving Covalent and Ionic Species . . . . .	90
5.2	Termination by Irreversible Collapse of the Macroion Pair . . . . .	93
5.2.1	Kinetics of Polymerization Involving Unimolecular Unopposed (Irreversible) First-Order Termination . . . . .	95
5.2.2	Termination by Recombination Within an Ion Pair and Structure of Anions . . . . .	96
5.3	Transfer and Termination Involving the Polymer Backbone . . . . .	97
5.3.1	Evidence of Reactions with Polymer Chains . . . . .	98
5.3.2	Intermolecular Chain Transfer (Termination) to Polymer Chains . . . . .	101

5.3.3	Chain Transfer to Polymer in Polymerization of THF . . . . .	104
5.3.4	Intermolecular Chain Transfer Followed by Reinitiation . . . . .	106
5.3.5	Intramolecular Termination . . . . .	108
5.3.6	Intramolecular Chain Transfer (Termination) Followed by Reinitiation . . . . .	109
5.3.7	Kinetics of Chain Transfer to Polymer. Determination of Rate Constants. Summary . . . . .	111
5.3.8	Thermodynamics of the Linear Polymer-Macrocycle Equilibrium . . . . .	111
5.3.9	Kinetic Enhancement in Macrocycles . . . . .	115
5.3.10	Propagation in Competition with Condensation . . . . .	117
5.3.11	Induction Periods in Polymerization Due to the End-Biting Reaction . . . . .	118
5.3.12	Kinetic Depression of Macrocycles . . . . .	118
5.3.13	Stereochemistry of Back-Biting Processes. Stereoselectivity . . . . .	119
5.4	Hydride Ion, Proton and Carbocation Transfer to Monomer . . . . .	121
5.4.1	Hydride Ion Shift and Transfer Reactions . . . . .	122
5.4.2	Proton and Carbocation Transfer Reactions . . . . .	124
<b>Addendum</b>	. . . . .	127
Initiation	. . . . .	127
Propagation	. . . . .	130
Stereocontrol in Polymerization	. . . . .	130
Termination and Transfer Processes	. . . . .	135
Macrocyclization, End-Biting and Back-Biting	. . . . .	135
Termination by Fragmentation of Complex Anions and Collapse of the Pairs of Ions	. . . . .	136
Transfer to Polymer	. . . . .	137
<b>References</b>	. . . . .	138
<b>Subject Index</b>	. . . . .	145
<b>Author Index Volumes 1-37</b>	. . . . .	151
