1 Investigating the Effectiveness of Variance Reduction Techniques in Manufacturing, Call Center and Cross-Docking Discrete Event Simulation Models.....	1
<i>Adrian Adewunmi, Uwe Aickelin</i>	
1.1 Introduction	1
1.2 Reduction of Variance in Discrete Event Simulation	3
1.2.1 Variance Reduction Techniques	4
1.3 Case Studies.....	8
1.3.1 Manufacturing System.....	8
1.3.2 Call Centre System	13
1.3.3 Cross-Docking System	17
1.4 Discussion.....	22
1.5 Conclusion	23
Authors Biography, Contact	23
Bibliography	24
 2 Planning of Earthwork Processes Using Discrete Event Simulation.....	 27
<i>Johannes Wimmer, Tim Horenburg, Willibald A. Günthner, Yang Ji, André Borrmann</i>	
2.1 Actual Situation in Earthwork Planning	27
2.2 Analysis of Requirements for DES in Earthworks	28
2.3 State of the Art and Related Work on DES in Earthworks	30
2.4 Modeling and Implementation of a Module Library for the Simulation of Earthworks.....	31
2.4.1 Framework for Earthwork Simulations.....	31
2.4.2 Modeling of Earthwork Processes	32
2.4.3 Module Library for Simulation in Earthworks.....	34
2.5 Coupling DES in Earthworks with Mathematical Optimization Methods.....	36
2.6 Evaluation and Case Study	38
2.7 Conclusion	41
Authors Biography, Contact	42
References	43

3 Simulation Applications in the Automotive Industry	45
<i>Edward J. Williams, Onur M. Ülgen</i>	
3.1 Manufacturing Simulation	45
3.2 Automotive Industry Simulation.....	45
3.2.1 Overview of Automobile Manufacturing.....	46
3.2.2 Simulation Studies Relative to Production Facility Lifecycles.....	47
3.2.3 Data Collection and Input Analysis Issues in Automotive Simulation.....	49
3.2.4 Software Tools Used in Automotive Simulation	50
3.3 Examples	52
3.4 A Glimpse into the Future of Simulation in the Automotive Industry.....	54
Authors Biography, Contact	55
ONUR M. ÜLGEN - PMC	55
EDWARD J. WILLIAMS - University of Michigan-Dearborn	55
References	57
 4 Simulating Energy Consumption in Automotive Industries.....	 59
<i>Daniel Wolff, Dennis Kulus, Stefan Dreher</i>	
4.1 Introduction	59
4.1.1 INPRO at a Glance	59
4.1.2 About the Authors.....	60
4.1.3 Motivation.....	60
4.1.4 Scope of the Proposed Approach	62
4.2 Energy Simulation	64
4.2.1 Definition.....	64
4.2.2 Simulating Energy in Discrete-Event Simulation Tools	64
4.2.3 Principle of Energy Simulation.....	65
4.2.4 Process-Oriented Approach to Energy Simulation	69
4.3 Conclusion and Outlook	84
References	86
 5 Coupling Digital Planning and Discrete Event Simulation Taking the Example of an Automated Car Body in White Production.....	 87
<i>Steffen Bangsow</i>	
5.1 The Task	87
5.2 Data Base in Process Designer	88
5.3 Selecting of Level of Detail for the Simulation	88
5.4 Developing a Robot Library Element	90
5.5 Linking, Shake Hands.....	91
5.6 Interface to Process Designer	92
5.6.1 Automatic Model Generation	93
5.6.2 Transfer of Processes from Process Planning to Material Flow Simulation.....	93
5.7 One Step Closer to the Digital Factory	95
5.8 Result of the Simulation	96

5.9	Outlook and Next Steps	97
5.10	Company Presentation and Contact	97
5.10.1	Magna Steyr Fahrzeugtechnik Graz (Austria)	97
5.10.2	The Author	100
	Reference	100
6	Modeling and Simulation of Manufacturing Process to Analyze End of Month Syndrome.....	101
	<i>Sanjay V. Kulkarni, Prashanth Kumar G.</i>	
6.1	Introduction	101
6.1.1	End of the Month Syndrome	102
6.1.2	Objective.....	103
6.1.3	Problem Statement.....	103
6.1.4	Modeling and Simulation Concepts.....	104
6.1.5	Software Selected for the Project Work.....	105
6.2	Study of the Process to Be Modeled.....	105
6.2.1	Process Mapping.....	106
6.2.2	Data Collection	107
6.2.3	Machine Wise Data Collection	107
6.2.4	CYCLE TIME (Seconds).....	108
6.2.5	Dispatch Plan for the Yamaha Line (GSF-Gear Shifter Fork)....	109
6.2.6	Delay Timings in the Processing Line	109
6.3	Building a Virtual Model and Achieving “AS IS” Condition.....	110
6.3.1	Report - As Is Condition	110
6.3.2	Reports and Analysis	112
6.3.3	Results.....	112
6.3.4	Conclusion	113
	Authors Biography, Contact	113
7	Creating a Model for Virtual Commissioning of a Line Head Control Using Discrete Event Simulation	117
	<i>Steffen Bangsow, Uwe Günther</i>	
7.1	Introduction and Motivation	117
7.1.1	Definitions	119
7.1.2	Software in the Loop and Hardware in the Loop Approaches	120
7.1.3	OPC	121
7.2	Virtual Commissioning of Line Controls.....	122
7.2.1	Task and Challenge.....	122
7.2.2	Virtual Commissioning and Discrete Event Simulation	123
7.3	Use Case	124
7.3.1	Virtual Commissioning Simulation Methodology	124
7.3.2	Virtual Commissioning Tests	126
7.3.3	Problems during Virtual Commissioning	128
7.3.4	Effects of Virtual Commissioning	128

7.4 Outlook	128
7.5 Summary	128
Company Profile and Contact	129
References	129
8 Optimizing a Highly Flexible Shoe Production Plant Using Simulation	131
<i>F.A. Voorhorst, A. Avai, C.R. Boër</i>	
8.1 Introduction	131
8.2 Problem Description	132
8.3 System Description	132
8.4 Modelling Issue	135
8.4.1 Simulation Architecture and Input Data Analysis	135
8.4.2 Simulation of Shoes Flow	135
8.4.3 Production Batches Composition	137
8.4.4 Simulation of Dynamic Labor Reallocation	137
8.4.5 Labor Allocation Modeling	138
8.5 Simulation Results and Performances Evaluation	139
8.5.1 Use-Case One for Assembly Area: Producing Only One Family of Shoes	140
8.5.2 Use-Case Two: Producing Two Shoes Families	140
8.5.3 Use-Case Three for Assembly Area: Producing Three Shoes Families	141
8.5.4 Finishing Area Overall Performances	142
8.5.5 Production Plant Overall Performances	143
8.6 Conclusion	144
Authors Biographies	144
References	145
9 Simulation and Highly Variable Environments: A Case Study in a Natural Roofing Slates Manufacturing Plant	147
<i>D. Crespo Pereira, D. del Rio Vilas, N. Rego Monteil, R. Rios Prado</i>	
9.1 Introduction	147
9.1.1 Sources of Variability in Manufacturing: A PPR Approach	148
9.1.2 Statistical Modelling of Variability	150
9.2 Case Study: The Roofing Slates Manufacturing Process	150
9.2.1 Process Description	151
9.2.2 The PPR Approach to Variability	153
9.3 The Model	155
9.3.1 Conceptual Model	155
9.3.2 Statistical Analysis	159
9.3.3 Model Implementation and Validation	166
9.4 Process Improvement	171
9.4.1 New Layout Description	171
9.4.2 New Layout Simulation	173

9.5 Discussion and Conclusions	174
Integrated Group for Engineering Research - Authors	175

10.1 Introduction.....	180
10.1.1 Problem Statement.....	180
10.1.2 Purpose	180
10.1.3 Scope.....	180
10.1.4 Objective.....	181
10.1.5 Methodology.....	181
10.2 System Background	182
10.2.1 Plant Layout Details.....	182
10.2.2 Description of Process	182
10.3 Model Building and Simulation.....	184
10.3.1 Assumptions of the Model	184
10.3.2 Simulation Model	184
10.3.3 Model Verification.....	188
10.3.4 Model Validation	188
10.3.5 Simulation Model Results and Analysis	189
10.4 Simulation Experiment	191
10.5 Analysis and Discussion	191
10.5.1 Performance Measures.....	191
10.5.2 Cost Analysis	193
10.5.3 Summaries of Simulation Experiments.....	194
10.6 Conclusions.....	195
10.7 Future Scope	196
Authors Biography, Contact	196
References	198
APPENDIX	198
11 End-to-End Modeling and Simulation of High-Performance Computing Systems.....	201
<i>Cyriel Minkenberg, Wolfgang Denzel, German Rodriguez, Robert Birke</i>	
11.1 Introduction.....	201
11.2 Design of HPC Systems.....	202
11.2.1 The Age of Ubiquitous Parallelism.....	202
11.3 End-to-End Modeling Approach.....	203
11.3.1 Traditional Approach	204
11.3.2 Taking the Application View	205
11.3.3 Model Components.....	206
11.3.4 Tools: Omnest.....	207
11.4 Computer Networks.....	207
11.4.1 Network Topologies.....	207

11.4.2	Indirect Networks: Fat Trees.....	209
11.4.3	Meshes and Tori.....	212
11.4.4	Dragonflies.....	213
11.4.5	Deadlock.....	214
11.5	Case Study 1: PERCS Simulator	214
11.5.1	PERCS Project.....	214
11.5.2	PERCS Compute Node Model and Interconnect	215
11.5.3	Plug-In Concept.....	217
11.5.4	Sample Results.....	219
11.6	Case Study 2: Venus	221
11.6.1	Tool Chain	221
11.6.2	Workload Models	226
11.6.3	Network Models	227
11.6.4	Sample Results.....	230
11.7	Scalability	231
11.7.1	Parallel Discrete Event Simulation	232
11.7.2	Parallel Simulation Support in Omnest.....	233
11.7.3	Venus	234
11.8	Conclusion.....	237
