1	Introduction	1
1.1	The 1D Carbon Allotrope: Structure and Properties	1
1.2	Solubilization of Single-Walled Carbon Nanotube	5
1.3	Post-Production SWCNT Separation	11
1.3.1	Overview of Sorting Approaches	11
1.3.2	Density Gradient Ultracentrifugation	13
1.3.3	Selective Dispersion	16
1.4	Characterization of Carbon Nanotubes	18
1.4.1	Absorption Spectroscopy	19
1.4.2	Emission Spectroscopy	21
1.4.3	Raman Spectroscopy	23
1.4.4	Atomic Force Microscopy	25
1.4.5	Zeta Potential	27
1.4.6	Hurdles in Nanotube Characterization	29
	References	31
2	Proposal	39
3	Results and Discussion	41
3.1	SWCNT Surfactant Design: Solubilization by Aromatic Amphiphiles	41
3.1.1	The Versatility of Perylene Bisimide Derivatives	41
3.1.2	Characterization of SWCNT-Surfactant Dispersions by Analytical Ultracentrifugation	76
3.1.3	Enhanced Adsorption Affinity of Anionic Perylene Surfactants towards Smaller Diameter SWCNTs	95
3.1.4	SWCNT Dispersion by a Cationic Perylene Based Surfactant	108
3.1.5	Formation of Mixed Surfactant-Cosurfactant Structures	114

3.1.6	Dispersion by Pyrene Derivatives	127
3.2	SWCNT Sorting	133
3.2.1	Density Gradient Ultracentrifugation	133
3.2.2	Cosurfactant-Replacement-Sedimentation Centrifugation.	152
3.2.3	SWCNT Length Sorting by Band Sedimentation.	156
3.2.4	Selective Dispersion by a Perylene-Based Nanotweezer.	159
3.3	Facilitating SWCNT Characterization by Optical Microscopy. . .	167
