1	Introduction	1
	References	3
2	Basic Concepts	5
2.1	Double Heterostructure Ridge Laser Diodes	5
2.2	Heterostructure-Design in Group-III-Nitrides	7
2.2.1	Bandgap and Refractive Index Engineering	7
2.2.2	Piezoelectric Polarization and Active Region Design.	10
2.2.3	Band Profile and Charge Carrier Transport	11
2.3	Band Structure and Optical Gain.	12
2.4	Laser Dynamics.	16
	References	18
3	Thermal Properties	21
3.1	Temperature Dependence of Output Characteristics	21
3.2	Thermal Resistance	23
3.3	Dynamics of Self-Heating.	24
	References	28
4	Light Propagation and Amplification in Laser Diodes from Violet to Green	29
4.1	Output Characteristics	29
4.2	Optical Gain	30
4.3	Refractive Index	33
4.4	Antiguinding Factor.	34
	References	35
5	Semipolar Crystal Orientations for Green Laser Diodes	37
5.1	Reduction of Internal Electric Field	39
5.2	Birefringence in Semipolar Waveguides	41

5.3	Band Structure of Semipolar Quantum Wells	43
5.4	Anisotropic Optical Gain	45
5.5	Polarization Switching	49
5.6	Comparison of Crystal Planes	52
	References	53
6	Dynamics of Charge Carriers and Photons	55
6.1	Differential Gain and Gain Saturation	56
6.2	Charge Carrier Recombination	58
6.2.1	Charge Carrier Lifetime at Low Excitation	59
6.2.2	Determination of the Recombination Rate	59
6.2.3	Charge Carrier Lifetime at Threshold	61
6.2.4	Recombination Coefficients	62
6.2.5	Limitations of the ABC-Model	64
6.3	Gain as Function of Charge Carrier Density	64
	References	65
7	Short-Pulse Laser Diodes	67
7.1	GaN-Based Multi-Section Laser Diodes	68
7.2	Tuneability of the Absorber	69
7.2.1	Absorption Spectrum	69
7.2.2	Charge Carrier Lifetime	74
7.3	Absorber and Gain Section Dynamics	76
7.4	Bias-Dependence of the Output Characteristics	78
7.5	Self-Pulsation and Single-Pulse Generation	80
	References	83
8	Summary and Conclusions	85
	Appendix: Numerical Methods	89
	Curriculum Vitae	93
