I Turbomachinery Flow Physics

1	Introduction, Turbomachinery, Applications, Types	3
1.1	Turbine	3
1.2	Compressor	7
1.3	Application of Turbomachines	9
1.3.1	Power Generation, Steam Turbines	9
1.3.2	Power Generation, Gas Turbines	9
1.3.3	Aircraft Gas Turbines	10
1.3.4	Diesel Engine Application	12
1.4	Classification of Turbomachines	13
1.4.1	Compressor Types	13
1.4.2	Turbine Types	14
1.5	Working Principle of a Turbomachine	14
	References	14
2	Kinematics of Turbomachinery Fluid Motion	15
2.1	Material and Spatial Description of the Flow Field	15
2.1.1	Material Description	15
2.1.2	Jacobian Transformation Function and Its Material Derivative	17
2.1.3	Spatial Description	20
2.2	Translation, Deformation, Rotation	21
2.3	Reynolds Transport Theorem	25
	References	27
3	Differential Balances in Turbomachinery	29
3.1	Mass Flow Balance in Stationary Frame of Reference	29
3.1.1	Incompressibility Condition	31
3.2	Differential Momentum Balance in Stationary Frame of Reference	32
3.2.1	Relationship between Stress Tensor and Deformation Tensor	34
3.2.2	Navier-Stokes Equation of Motion	36
3.2.3	Special Case: Euler Equation of Motion	38
3.3	Some Discussions on Navier-Stokes Equations	41
3.4	Energy Balance in Stationary Frame of Reference	42
3.4.1	Mechanical Energy	42
3.4.2	Thermal Energy Balance	45

3.4.3	Total Energy	48
3.4.4	Entropy Balance	49
3.5	Differential Balances in Rotating Frame of Reference	50
3.5.1	Velocity and Acceleration in Rotating Frame	50
3.5.2	Continuity Equation in Rotating Frame of Reference	52
3.5.3	Equation of Motion in Rotating Frame of Reference	53
3.5.4	Energy Equation in Rotating Frame of Reference	55
	References	57
4	Integral Balances in Turbomachinery	59
4.1	Mass Flow Balance	59
4.2	Balance of Linear Momentum	61
4.3	Balance of Moment of Momentum	66
4.4	Balance of Energy	72
4.4.1	Energy Balance Special Case 1: Steady Flow	77
4.4.2	Energy Balance Special Case 2: Steady Flow, Constant Mass Flow	78
4.5	Application of Energy Balance to Turbomachinery Components ...	78
4.5.1	Application: Accelerated, Decelerated Flows	79
4.5.2	Application: Combustion Chamber	80
4.5.3	Application: Turbine, Compressor	81
4.5.3.1	Uncooled Turbine	81
4.5.3.2	Cooled Turbine	82
4.5.3.3	Uncooled Compressor	83
4.6	Irreversibility and Total Pressure Losses	84
4.6.1	Application of Second Law to Turbomachinery Components ..	85
4.7	Flow at High Subsonic and Transonic Mach Numbers	87
4.7.1	Density Changes with Mach Number, Critical State	88
4.7.2	Effect of Cross-Section Change on Mach Number	93
4.7.3	Compressible Flow through Channels with Constant Cross Section	101
4.7.4	The Normal Shock Wave Relations	109
4.7.5	The Oblique Shock Wave Relations	115
4.7.6	The Detached Shock Wave	119
4.7.7	Prandtl-Meyer Expansion	119
	References	122
5	Theory of Turbomachinery Stages	123
5.1	Energy Transfer in Turbomachinery Stages	123
5.2	Energy Transfer in Relative Systems	124
5.3	General Treatment of Turbine and Compressor Stages	125
5.4	Dimensionless Stage Parameters	129
5.5	Relation between Degree of Reaction and Blade Height	131
5.6	Effect of Degree of Reaction on the Stage Configuration	134

5.7	Effect of Stage Load Coefficient on Stage Power	136
5.8	Unified Description of a Turbomachinery Stage	137
5.8.1	Unified Description of Stage with Constant Mean Diameter ..	137
5.8.2	Generalized Dimensionless Stage Parameters	138
5.9	Special Cases	140
5.9.1	Case 1, Constant Mean Diameter	141
5.9.2	Case 2, Constant Mean Diameter and Meridional Velocity Ratio	141
5.10	Increase of Stage Load Coefficient, Discussion	140
	References	144
6	Turbine and Compressor Cascade Flow Forces	145
6.1	Blade Force in an Inviscid Flow Field	145
6.2	Blade Forces in a Viscous Flow Field	150
6.3	The Effect of Solidity on Blade Profile Losses	156
6.4	Relationship Between Profile Loss Coefficient and Drag	156
6.5	Optimum Solidity	158
6.5.1	Optimum Solidity, by Pfeil	158
6.5.2	Optimum Solidity, by Zweifel	158
6.6	Generalized Lift-Solidity Coefficient	162
6.6.1	Lift-Solidity Coefficient for Turbine Stator	164
6.6.2	Turbine Rotor	168
	References	171

II Turbomachinery Losses, Efficiencies, Blades

7	Losses in Turbine and Compressor Cascades	175
7.1	Turbine Profile Loss	176
7.2	Viscous Flow in Compressor Cascade	178
7.2.1	Calculation of Viscous Flows	178
7.2.2	Boundary Layer Thicknesses	179
7.2.3	Boundary Layer Integral Equation	181
7.2.4	Application of Boundary Layer Theory to Compressor Blades ..	182
7.2.5	Effect of Reynolds Number	186
7.2.6	Stage Profile Losses	186
7.3	Trailing Edge Thickness Losses	186
7.4	Losses Due to Secondary Flows	192
7.4.1	Vortex Induced Velocity Field, Law of Bio-Savart	194
7.4.2	Calculation of Tip Clearance Secondary Flow Losses	197
7.4.3	Calculation of Endwall Secondary Flow Losses	200
7.5	Flow Losses in Shrouded Blades	204
7.5.1	Losses Due to Leakage Flow in Shrouds	204
7.6	Exit Loss	211

7.7	Trailing Edge Ejection Mixing Losses of Gas Turbine Blades	212
7.7.1	Calculation of Mixing Losses	212
7.7.2	Trailing Edge Ejection Mixing Losses	217
7.7.3	Effect of Ejection Velocity Ratio on Mixing Loss	217
7.7.4	Optimum Mixing Losses	219
7.8	Stage Total Loss Coefficient	219
7.9	Diffusers, Configurations, Pressure Recovery, Losses	220
7.9.1	Diffuser Configurations	221
7.9.2	Diffuser Pressure Recovery	222
7.9.3	Design of Short Diffusers	225
7.9.4	Some Guidelines for Designing High Efficiency Diffusers . .	228
	References	229
8	Efficiency of Multi-stage Turbomachines	231
8.1	Polytropic Efficiency	231
8.2	Isentropic Turbine Efficiency, Recovery Factor	234
8.3	Compressor Efficiency, Reheat Factor	237
8.4	Polytropic versus Isentropic Efficiency	239
	References	240
9	Incidence and Deviation	241
9.1	Cascade with Low Flow Deflection	241
9.1.1	Conformal Transformation	241
9.1.2	Flow Through an Infinitely Thin Circular Arc Cascade	250
9.1.3	Thickness Correction	256
9.1.4	Optimum Incidence	256
9.1.5	Effect of Compressibility	258
9.2	Deviation for High Flow Deflection	259
9.2.1	Calculation of Exit Flow Angle	261
	References	263
10	Simple Blade Design	265
10.1	Conformal Transformation, Basics	265
10.1.1	Joukowski Transformation	267
10.1.2	Circle-Flat Plate Transformation	267
10.1.3	Circle-Ellipse Transformation	268
10.1.4	Circle-Symmetric Airfoil Transformation	269
10.1.5	Circle-Cambered Airfoil Transformation	271
10.2	Compressor Blade Design	272
10.2.1	Low Subsonic Compressor Blade Design	273
10.2.2	Compressors Blades for High Subsonic Mach Number	279
10.2.3	Transonic, Supersonic Compressor Blades	280
10.3	Turbine Blade Design	281
10.3.1	Graphic Design of Camberline	282

10.3.2 Camberline Coordinates Using Bèzier Curve	283
10.3.3 Alternative Calculation Method	285
10.4 Assessment of Blades Aerodynamic Quality	287
References	290

11 Radial Equilibrium 291

11.1 Derivation of Equilibrium Equation	292
11.2 Application of Streamline Curvature Method	300
11.2.1 Step-by-step solution procedure	302
11.2 Compressor Examples	306
11.3 Turbine Example, Compound Lean Design	309
11.3.1 Blade Lean Geometry	310
11.3.2 Calculation of Compound Lean Angle Distribution	311
11.3.3 Example: Three-Stage Turbine Design	313
11.4 Special Cases	316
11.4.1 Free Vortex Flow	316
11.4.2 Forced vortex flow	317
11.4.3 Flow with constant flow angle	318
References	319

III Turbomachinery Dynamic Performance

12 Dynamic Simulation of Turbomachinery Components ... 323

12.1 Theoretical Background	324
12.2 Preparation for Numerical Treatment	330
12.3 One-Dimensional Approximation	331
12.3.1 Time Dependent Equation of Continuity	331
12.3.2 Time Dependent Equation of Motion	333
12.3.3 Time Dependent Equation of Total Energy	334
12.4 Numerical Treatment	339
References	340

13 Generic Modeling of Turbomachinery Components 341

13.1 Generic Component, Modular Configuration	342
13.1.1 Plenum as Coupling Module	343
13.1.2 Group 1: Modules: Inlet, Exhaust, Pipe	345
13.1.3 Group 2: Recuperators, Combustion Chambers, Afterburners	346
13.1.4 Group 3: Adiabatic Compressor and Turbine Components	348
13.1.5 Group 4: Diabatic Turbine and Compressor Components	350
13.1.6 Group 5: Control System, Valves, Shaft, Sensors	352
13.2 System Configuration, Nonlinear Dynamic Simulation	352
References	356

14 Modeling of Inlet, Exhaust, and Pipe Systems	357
14.1 Unified Modular Treatment	357
14.2 Physical and Mathematical Modeling of Modules	357
14.3 Example: Dynamic behavior of a Shock Tube	360
14.3.1 Shock Tube Dynamic Behavior	361
References	365
15 Modeling of Recuperators, Combustors, Afterburners ...	367
15.1 Modeling Recuperators	368
15.1.1 Recuperator Hot Side Transients	369
15.1.2 Recuperator Cold Side Transients	369
15.1.3 Coupling Condition Hot, Cold Side	370
15.1.4 Recuperator Heat Transfer Coefficient	371
15.2 Modeling Combustion Chambers	372
15.2.1 Mass Flow Transients	373
15.2.2 Temperature Transients	374
15.2.3 Combustion Chamber Heat Transfer	376
15.3 Example: Startup and Shutdown of a Combustion Chamber	378
15.4 Modeling of Afterburners	381
References	382
16 Modeling of Compressor Component, Design, Off-Design	383
16.1 Compressor Losses	384
16.1.1 Profile Losses	385
16.1.2 Diffusion Factor	387
16.1.3 Generalized Maximum Velocity Ratio for Cascade, Stage ..	391
16.1.4 Compressibility Effect	393
16.1.5 Shock Losses	397
16.1.6 Correlations for Boundary Layer Momentum Thickness	406
16.1.7 Influence of Different Parameters on Profile Losses	407
16.1.7.1 Mach Number Effect	407
16.1.7.2 Reynolds Number Effect	408
16.2 Compressor Design and Off-Design Performance	409
16.2.1 Stage-by-Stage and Row-by-Row Compression Process ...	409
16.2.1.1 Stage-by-Stage Calculation of Compression Process	409
16.2.1.2 Row-by-Row Adiabatic Compression	411
16.2.1.3 Off-Design Efficiency Calculation	415
16.3 Generation of Steady State Performance Map	418
16.3.1 Inception of Rotating Stall	420
16.3.2 Degeneration of Rotating Stall into Surge	422
16.4 Compressor Modeling Levels	423
16.4.1 Module Level 1: Using Performance Maps	424
16.4.1.1 Quasi-dynamic Modeling Using Performance Maps	426
16.4.1.2 Simulation Example:	427

16.4.2 Module Level 2: Row-by-Row Adiabatic Compression	429
16.4.2.1 Active Surge Prevention by Adjusting the Stator Blades	430
16.4.2.2 Simulation Example: Surge and Its Prevention	431
16.4.3 Module Level 3: Row-by-Row Diabatic Compression	436
16.4.3.1 Description of Diabatic Compressor Module	437
16.4.3.2 Heat Transfer Closure Equations:	439
References	442

17 Turbine Aerodynamic Design, Performance 445

17.1 Stage-by-Stage and Row-by-Row Design	447
17.1.1 Stage-by-Stage Calculation of Expansion Process	448
17.1.2 Row-by-Row Adiabatic Expansion	449
17.1.3 Off-Design Efficiency Calculation	454
17.1.4 Behavior under Extreme Low Mass Flows	456
17.1.5 Example: Steady Design and Off-Design Behavior	459
17.2 Off-Design Calculation Using Global Turbine Characteristics	461
17.3 Modeling of Turbine Module for Dynamic Performance Simulation	462
17.3.1 Module Level 1: Using Turbine Performance Characteristics	463
17.3.2 Module Level 2: Row-by-Row Expansion Calculation	464
17.3.3 Module Level 3: Row-by-Row Diabatic Expansion	465
17.3.3.1 Description of Diabatic Turbine Module, First Method:	467
17.3.3.2 Description of Module, Second Method	469
17.3.3.3 Heat Transfer Closure Equations	471
References	472

18 Gas Turbine Engines, Design and Dynamic Performance 473

18.1 Gas Turbine Steady Design Operation, Process	475
18.1.1 Gas Turbine Process	477
18.1.2 Improvement of Gas Turbine Thermal Efficiency	483
18.2 Non-Linear Gas Turbine Dynamic Simulation	485
18.2.1 State of Dynamic Simulation, Background	486
18.3 Engine Components, Modular Concept, Module Identification	487
18.4 Levels of Gas Turbine Engine Simulations, Cross Coupling	493
18.5 Non-Linear Dynamic Simulation Case Studies	494
18.5.1 Case Study 1: Compressed Air Energy Storage Gas Turbine .	495
18.5.1.1 Simulation of Emergency Shutdown	497
18.5.2 Case Study 2: Power Generation Gas Turbine Engine	499
18.5.3 Case Study 3: Simulation of a Multi-Spool Gas Turbine . . .	504
18.6 A Byproduct of Dynamic Simulation: Detailed Calculation	507
18.7 Summary Part III, Further Development	510
References	511

IV Turbomachinery CFD-Essentials

19 Basic Physics of Laminar-Turbulent Transition 515

19.1 Transition Basics: Stability of Laminar Flow	515
19.2 Laminar-Turbulent Transition, Fundamentals	515
19.3 Physics of an Intermittent Flow	518
19.3.1 Intermittent Behavior of Statistically Steady Flows	519
19.3.2 Turbulent/Non-turbulent Decisions	520
19.3.3 Intermittency Modeling for Flat Plate Boundary Layer	524
19.4 Physics of Unsteady Boundary Layer Transition	525
19.4.1 Experimental Simulation of the Unsteady Boundary Layer .	527
19.4.2 Ensemble Averaging High Frequency Data	530
19.4.3 Intermittency Modeling for Periodic Unsteady Flow	533
19.5 Implementation of Intermittency into Navier Stokes Equations	536
19.5.1 Reynolds-Averaged Navier-Stokes Equations (RANS)	536
19.5.2 Conditioning RANS for Intermittency Implementation	540
References	542

20 Turbulent Flow and Modeling in Turbomachinery 545

20.1 Fundamentals of Turbulent Flows	545
20.1.1 Type of Turbulence	547
20.1.2 Correlations, Length and Time Scales	548
20.1.3 Spectral Representation of Turbulent Flows	555
20.1.4 Spectral Tensor, Energy Spectral Function	558
20.2 Averaging Fundamental Equations of Turbulent Flow	560
20.2.1 Averaging Conservation Equations	561
20.2.1.1 Averaging the Continuity Equation	561
20.2.1.2 Averaging the Navier-Stokes Equation	561
20.2.1.3 Averaging the Mechanical Energy Equation	562
20.2.1.4 Averaging the Thermal Energy Equation	563
20.2.1.5 Averaging the Total Enthalpy Equation	565
20.2.1.6 Quantities Resulting from Averaging to Be Modeled	568
20.2.2 Equation of Turbulence Kinetic Energy	570
20.2.3 Equation of Dissipation of Kinetic Energy	576
20.3 Turbulence Modeling	577
20.3.1 Algebraic Model: Prandtl Mixing Length Hypothesis	578
20.3.2 Algebraic Model: Cebeci-Smith Model	584
20.3.3 Baldwin-Lomax Algebraic Model	585
20.3.4 One- Equation Model by Prandtl	586
20.3.5 Two-Equation Models	587
20.3.5.1 Two-Equation k- ϵ Model	587
20.3.5.2 Two-Equation k- ω -Model	589
20.3.5.3 Two-Equation k- ω -SST-Model	590
20.4 Grid Turbulence	592

20.5	Examples of Two-Equation Models	594
20.5.1	Internal Flow, Sudden Expansion	594
20.5.2	Internal Flow, Turbine Cascade	595
20.5.3	External Flow, Lift-Drag Polar Diagram	596
20.5.4	Case Study: Flow Simulation in a Rotating Turbine	597
20.5.5	Results, Discussion	605
20.5.6	Rotating Turbine RANS, URANS-Shortcomings, Discussion	614
	References	615

21.2	Exact Solutions of Laminar Boundary Layer Equations	623
21.2.1	Zero Pressure Gradient Boundary Layer	624
21.2.2	Non-zero Pressure Gradient Boundary Layer	626
21.2.3	Polhausen Approximate Solution	629
21.3	Boundary Layer Theory, Integral Method	631
21.3.1	Boundary Layer Thicknesses	631
21.3.2	Boundary Layer Integral Equation	633
21.4	Turbulent Boundary Layers	637
21.4.1	Universal Wall Functions	640
21.4.2	Velocity Defect Function	643
21.5	Boundary Layer, Differential Treatment	648
21.5.1	Solution of Boundary Layer Equations	653
21.6	Measurement of Boundary Flow, Basic Techniques	653
21.6.1	Experimental Techniques	653
21.6.1.1	HWA Operation Modes, Calibration	654
21.6.1.2	HWA Averaging, Sampling Data	655
21.7	Examples: Calculations, Experiments	657
21.7.1	Steady State Velocity Calculations	657
21.7.1.1	Experimental Verification	659
21.7.1.2	Heat Transfer Calculation, Experiment	660
21.7.2	Periodic Unsteady Inlet Flow Condition	661
21.7.2.1	Experimental Verification	664
21.7.2.2	Heat Transfer Calculation, Experiment	666
21.7.3	Application of κ - ω Model to Boundary Layer	667
21.8	Parameters Affecting Boundary Layer	667
21.8.1	Parameter Variations, General Remarks	668
21.8.2	Effect of Periodic Unsteady Flow	672
