Preface	V
Siddhartha Shakya and Roberto Santana	
1 Why Markov Networks in Evolutionary Computation?	V
2 Book Organisation and Brief Overview of the Chapters Content	VI
References	VIII

Part I Introduction

1 Probabilistic Graphical Models and Markov Networks	3
Roberto Santana and Siddhartha Shakya	
1.1 Introduction	3
1.2 Graphs and Independence Graphs	5
1.2.1 Relevant Concepts from Graph Theory	6
1.3 Bayesian Networks	7
1.4 Markov Networks	8
1.4.1 Markov Networks of Bounded Complexity	9
1.4.2 Gaussian Markov Random Fields	10
1.5 Learning Markov Networks	11
1.5.1 Learning of Discrete Markov Networks	11
1.5.2 Learning of Gaussian Markov Random Fields	13
1.6 Sampling Markov Networks	14
1.7 Other Probabilistic Graphical Models	15
1.7.1 Mixture Models	15
1.7.2 Factor Graphs	16
1.7.3 Region Graphs	16
References	17

2	A Review of Estimation of Distribution Algorithms and Markov Networks	21
	Siddhartha Shakya and Roberto Santana	
2.1	Introduction	21
2.2	Estimation of Distribution Algorithm	22
2.2.1	A Simple EDA Workflow	22
2.2.2	Probabilistic Graphical Models and EDAs	23
2.3	EDA Categorisation	24
2.3.1	Univariate EDA	25
2.3.2	Multivariate EDA	27
2.4	Estimation of Distribution Algorithms with Markov Networks	29
2.4.1	Motivation	29
2.4.2	History	30
2.4.3	Review of Popular EDAs with Markov Networks	30
2.4.4	Current Research on EDA Based on Markov Networks	32
	References	33
3	MOA - Markovian Optimisation Algorithm	39
	Siddhartha Shakya and Roberto Santana	
3.1	Introduction	39
3.2	Local and Global Properties in Graphical Models	40
3.3	Markov Network Based EDAs	42
3.4	Markovianity based Optimisation Algorithm (MOA)	42
3.5	Results and Analysis	45
3.5.1	Comparison with Other EAs	46
3.5.2	Introducing Permutation	47
3.5.3	Introducing Overlaps	47
3.5.4	Incorporating Prior Information	48
3.5.5	Gibbs Sampling vs. Temperature Less Sampling	49
3.6	Conclusion	51
	References	51
4	DEUM - Distribution Estimation Using Markov Networks	55
	Siddhartha Shakya, John McCall, Alexander Brownlee, and Gilbert Owusu	
4.1	Introduction	55
4.2	Markov Networks	56
4.3	Fitness Modelling and DEUM Algorithms	58
4.3.1	Fitness Modelling	59
4.3.2	Univariate MFM	60
4.3.3	Multivariate MFM	60
4.3.4	Estimating MRF Parameters	61
4.3.5	Sampling Markov Networks	61
4.4	DEUM _d - A Univariate DEUM Algorithm with Direct Sampling of Gibbs Distribution	63

4.5	Is-DEUM _g - A Multivariate DEUM with Ising Structure and Gibbs Sampler	64
4.6	Full DEUM - A Fully Multivariate General DEUM Algorithm...	65
4.6.1	Estimation of Undirected Structure	66
4.6.2	Finding Cliques and Assigning Potentials	66
4.6.3	Sampling New Solution	67
4.7	Summary	67
	References	68
5	MN-EDA and the Use of Clique-Based Factorisations in EDAs	73
	Roberto Santana	
5.1	Introduction	73
5.2	Factorisations and Factorised Distribution Algorithms	75
5.3	Region-Based Approximations of a Probability Distribution	77
5.3.1	Kikuchi Approximation	78
5.3.2	Algorithm for Constructing Valid Region Based Decompositions	79
5.4	Gibbs Sampling of the Kikuchi Approximation	80
5.5	Learning the Kikuchi Approximation from the Data	81
5.6	The Markov Network EDA	82
5.7	Related Work and Extensions to MN-EDA	83
5.7.1	Mixture of Kikuchi Approximations	83
5.7.2	Combining Kikuchi Approximations with Inference Methods	84
5.7.3	Generalised EDAs Based on Undirected Models	84
5.8	Conclusions	86
	References	86

Part II Theory

6	Convergence Theorems of Estimation of Distribution Algorithms	91
	Heinz Mühlenbein	
6.1	Introduction	91
6.2	Convergence Theory for Infinite Samples	92
6.2.1	A Convergence Theorem for MN-GIBBS	94
6.2.2	Some Implementations of EDAs Using Markov Networks	97
6.3	Convergence of MN-GIBBS with Finite Samples	98
6.3.1	Learning of Markov Networks and Factor Graphs	99
6.3.2	Sample Complexity for Learning the ADF Structure by Probing	99
6.4	A Comparison of Markov Networks and Bayesian Networks ...	100
6.4.1	A Sampling Method Finding the Most Probable States	102
6.4.2	Computational Complexity of Gibbs Sampling	102

6.5	Theoretical and Numerical Results for the Ising Problem	103
6.6	Exact and Approximate Factorizations of the True Distribution	105
6.7	Conclusion and Outlook	106
	References	106
7	Adaptive Evolutionary Algorithm Based on a Cliques Gibbs Sampling over Graphical Markov Model Structure	109
	Eunice Esther Ponce-de-Leon-Senti and Elva Diaz-Diaz	
7.1	Introduction	109
7.2	Concepts and Definitions	110
7.2.1	Gibbs Distribution and Markov Random Fields (MRF)	111
7.2.2	Gibbs Sampling	112
7.2.3	Selection Procedure	112
7.2.4	Random Selection Schema	112
7.2.5	The Kullback-Leibler Divergence	113
7.2.6	Statistical Model Complexity Index	113
7.3	Algorithms Descriptions and Pseudocodes	114
7.3.1	Chow and Liu Maximum Weight Spanning Tree Algorithm (CL)	114
7.3.2	Extended Tree Algorithm (ETreeAL)	114
7.3.3	Cliques Gibbs Sampler (CG-Sampler) Optimizer	115
7.3.4	Adaptive Extended Tree Cliques – EDA (AETC-EDA)	115
7.3.5	Adaptive Tree Cliques – EDA (ATC-EDA)	116
7.4	Test Functions	116
7.5	Experiments	118
7.6	Results and Discussion	119
7.7	Conclusions and Proposals for Future Work	121
	References	122
8	The Markov Network Fitness Model	125
	Alexander E.I. Brownlee, John A.W. McCall, and Siddhartha K. Shakya	
8.1	Introduction, Motivation and Alternatives	125
8.2	Defining the Model	127
8.2.1	Model Quality and the Fitness Prediction Correlation	129
8.3	Applications	132
8.3.1	MFM-GA	132
8.3.2	Guided Local Search	132
8.4	Issues Affecting Modelling Capability	133
8.4.1	Model Building Time	134
8.4.2	Model Structure	134
8.4.3	Population Size and Selection	134

8.5	Conclusion and Future Work	135
	References	136
9	Fast Fitness Improvements in Estimation of Distribution Algorithms Using Belief Propagation	141
	Alexander Mendiburu, Roberto Santana, and Jose A. Lozano	
9.1	Introduction	141
9.2	Belief Propagation	144
9.3	EDAs and BP	146
9.4	Experiments	147
9.4.1	Experiments Settings	148
9.4.2	Results	149
9.5	Conclusions and Future Work	151
	References	152
10	Continuous Estimation of Distribution Algorithms Based on Factorized Gaussian Markov Networks	157
	Hossein Karshenas, Roberto Santana, Concha Bielza, and Pedro Larrañaga	
10.1	Introduction	157
10.2	Multivariate Gaussian Distribution	158
10.2.1	Markov Networks	159
10.2.2	Gaussian Markov Random Fields	159
10.2.3	Marginal Product Factorizations	160
10.3	GMRF-Based EDA with Marginal Factorization	161
10.3.1	A Hybrid Approach to Model Learning of GMRF	162
10.3.2	Model Learning Using Regularization	162
10.3.3	Clustering by Affinity Propagation	163
10.3.4	Estimating an MGD for the Factors	164
10.3.5	Sampling Undirected Graphical Models for Continuous Problems	164
10.4	Related Work	164
10.5	Experiments	165
10.5.1	Benchmark Functions	165
10.5.2	EDA Parameters	167
10.5.3	Influence of the Regularization Parameter	167
10.5.4	Optimization Performance	168
10.6	Conclusions	170
	References	170
11	Using Maximum Entropy and Generalized Belief Propagation in Estimation of Distribution Algorithms	175
	Robin Höns	
11.1	Introduction	175
11.2	The Factorized Distribution Algorithm	176

11.3	Finding a Factorization System	177
11.3.1	Subfunction Choice	178
11.3.2	Subfunction Merge	178
11.3.3	An Important Example: Pentavariate Factorization of the 2-D Grid	180
11.3.4	With Maximum Entropy	181
11.3.5	Numerical Results	182
11.4	Loopy Belief Propagation	183
11.4.1	The Region Graph	183
11.4.2	Belief Propagation on the Region Graph	184
11.4.3	Optimization Using Loopy Models	185
11.4.4	Numerical Results: Deceptive Grid	185
11.4.5	Numerical Results: Ising Spinglass	186
11.5	Conclusion	188
	References	189

Part III Application

12	Applications of Distribution Estimation Using Markov Network Modelling (DEUM)	193
	John McCall, Alexander Brownlee, and Siddhartha Shakya	
12.1	Distribution Estimation Using Markov Network Modelling	193
12.2	Chemotherapy Optimisation	195
12.2.1	Cancer and Chemotherapy	196
12.2.2	Optimisation of Cancer Chemotherapy	196
12.2.3	EDAs for Cancer Chemotherapy Optimisation	197
12.3	Dynamic Pricing	198
12.3.1	Dynamic Pricing for Resource Management	199
12.3.2	Evolutionary Algorithms for Resource Management Using a Dynamic Pricing Model	200
12.4	Agricultural Bio-control	201
12.4.1	Evolutionary Algorithms for Agricultural Bio-control	202
12.5	Feature Selection in Case-Based Reasoning	203
12.5.1	Genetic Algorithm Using MFM Surrogate	203
12.6`	Conclusion	205
	References	205
13	Vine Estimation of Distribution Algorithms with Application to Molecular Docking	209
	Marta Soto, Alberto Ochoa, Yasser González-Fernández, Yanely Milanés, Adriel Álvarez, Diana Carrera, and Ernesto Moreno	
13.1	Introduction	209
13.2	Two Continuous EDAs Based on Undirected Models	210

13.3	Vine Approach in EDAs	212
13.3.1	From Multivariate Copulas to Vines	212
13.3.2	Vine Modeling Approach	212
13.3.3	Vine Estimation of Distribution Algorithm	214
13.4	Molecular Docking with VEDA	215
13.5	Experiments	216
13.5.1	Experimental Design	216
13.5.2	Numerical Results and Discussion	217
13.6	AG, PSO and DE in the Molecular Docking Problem	221
13.7	Conclusions	222
	References	223
14	EDA-RL: EDA with Conditional Random Fields for Solving Reinforcement Learning Problems	227
	Hisashi Handa	
14.1	Introduction	227
14.2	Reinforcement Learning Problems	228
14.3	Conditional Random Fields	229
14.3.1	Overview	229
14.3.2	Linear-Chain CRF	230
14.3.3	Parameter Estimation	230
14.4	EDA-RL	231
14.4.1	Calculation Procedure of EDA-RL	231
14.4.2	Probabilistic Models	232
14.4.3	Structure Search of Probabilistic Models	233
14.4.4	Data Correction by Loop Elimination	234
14.5	Experiments	234
14.5.1	Problem Settings	234
14.5.2	Experimental Results	235
14.6	Conclusions	238
	References	238
	Index	241
