

Contents

1	Triangulated Surfaces and Polyhedral Structures	1
1.1	Triangulations	1
1.2	Piecewise-Linear Manifolds	4
1.3	Polyhedral Surfaces	8
1.4	The Metric Geometry of Polyhedral Surfaces	10
1.5	Complex-Valued Holonomy	14
1.6	The Space of Polyhedral Structures $POL_{g,N_0}(M)$	17
1.7	The Space of Polyhedral Surfaces $\mathcal{T}_{g,N_0}^{met}(M; \{\Theta(k)\})$	19
1.8	Cotangent Cones and Circle Bundles $\mathcal{Q}_{(k)}$ Over $\mathcal{T}_{g,N_0}^{met}(M)$	25
1.9	The Conical Symplectic Form on $\mathcal{T}_{g,N_0}^{met}(M, \{\Theta(k)\})$	36
1.10	The Euler Class of the Circle Bundle $\mathcal{Q}_{(k)}$	41
1.11	Degenerations and Stable Polyhedral Surfaces	43
	References	53
2	Singular Euclidean Structures and Riemann Surfaces	55
2.1	The Barycentrically Dual Polytope of a Polyhedral Surface	56
2.2	Polytope Automorphisms and Ribbon Graphs	60
2.3	Remarks on Metric Ribbon Graphs	66
2.4	The Riemann Surface Associated with (P_T, M)	67
2.5	Troyanov's Singular Euclidean Structures	75
2.6	Chern and Euler Classes Over $POL_{g,N_0}(M)$	79
	References	80
3	Polyhedral Surfaces and the Weil–Petersson Form	83
3.1	Horospheres in $\mathbb{H}^3$	83
3.2	Ideal Tetrahedra in $\mathbb{H}_{up}^{3,+}$	87
3.3	A Sky-Mapping for Polyhedral Surfaces	89
3.4	The Computation of Lambda-Lengths	90

3.5	Polyhedral Surfaces and Hyperbolic Surfaces with Boundaries	94
3.6	The Weil–Petersson Form on $\mathcal{T}_{g,N_0}^{met}(M, \{\Theta(k)\})$	101
3.7	The Symplectic Volume of the Space of Polyhedral Structures	107
	References	114
4	The Quantum Geometry of Polyhedral Surfaces	115
4.1	Introduction	115
4.2	Space of Maps and QFT	115
4.3	The Space of Natural Lagrangians	117
4.4	An Informal Geometrical View to Renormalization	119
4.5	The Weyl Anomaly and Liouville Action	126
4.6	Non-critical Strings and 2D Quantum Gravity	130
4.7	A Spacetime Interpretation of the Liouville Mode	134
4.8	A Renormalization Group Perspective	136
4.9	KPZ Scaling	140
4.10	2D QG and Polyhedral Surfaces: General Remarks	144
4.11	The Moduli Space $\overline{\mathfrak{M}}_{g,N_0}$ and 2D Quantum Gravity	146
4.12	Polyhedral Liouville Action and KPZ Scaling	150
4.13	Polyhedral Surfaces and Open/Closed String Duality	160
4.14	Glimpses of Hyperbolic 3-Manifolds and of Their Volume	165
	References	171
5	State Sum Models and Observables	175
5.1	The Wigner 6j Symbol and the Tetrahedron	176
5.1.1	The Racah Polynomial and Algebraic Identities for the 6j Symbol	178
5.1.2	Ponzano–Regge Asymptotic Formula	180
5.2	State Sum Functionals for Closed 3-Manifolds	181
5.2.1	Ponzano–Regge State Sum and Semiclassical Euclidean Gravity	181
5.2.2	Turaev–Viro Quantum Invariant	184
5.2.3	Chern–Simons–Witten Generating Functional and Turaev–Viro Invariant	186
5.3	State Sum Functionals for 3-Manifolds with Boundary	188
5.3.1	Turaev–Viro Invariant with a Fixed Boundary Triangulation	188
5.3.2	Ponzano–Regge State Sum for a Pair $(M^3, \partial M^3)$	189
5.3.3	q -Extension, Induced State Sums and d -Dimensional Hierarchies	194

5.4	Observables in the Turaev–Viro Environment	198
5.4.1	Turaev–Viro Quantum Initial Data.	198
5.4.2	State Sum Invariants of Colored Fat Graphs in 3-Manifolds.	201
5.4.3	Heegard Splitting Version of State Models for Closed Oriented 3-Manifolds	211
