Preface	V
Acknowledgment	VII
List of Figures	XIII
List of Tables	XVII
List of Algorithms	XIX
1 Introduction	1
2 Prerequisites from Applied Geometry and Spline Theory	7
2.1 Parametric Curves, Surfaces and Volumes	8
2.2 Spline Functions	9
2.2.1 Polynomial Spaces	9
2.2.2 Spline Spaces	10
2.2.3 B-splines	10
2.2.4 Non-Uniform Rational B-splines	13
2.3 Multivariate Tensor-product Splines	15
2.4 Algorithmic Aspects	16
2.4.1 Evaluations	16
2.4.2 Refinement	17
3 Mathematical Models and Finite Element Analysis	19
3.1 Mathematical Models	20
3.1.1 Heat and Potential Flow	20
3.1.2 Continuum Mechanics	20
3.2 Variational Formulation	24
3.2.1 Abstract Setting	24
3.2.2 Application to Models	25
3.3 Finite Element Foundations	27
3.3.1 Galerkin Projection	27
3.3.2 Finite Element Function Spaces	28
3.3.3 Reference Elements	30
3.3.4 Convergence Analysis	31
3.4 Finite Elements in Use	32
3.4.1 Some Finite Element Spaces	32
3.4.2 Isoparametric Finite Elements	34

3.4.3	Mesh Refinement	36
3.4.4	Adaptive Finite Elements and Error Estimation	37
3.5	Implementation Issues	39
3.5.1	Data Representation	40
3.5.2	Assembly of System Matrices	41
3.5.3	Boundary Conditions	44
3.5.4	Postprocessing	44
4	Isogeometric Analysis	47
4.1	Basic Idea and Fundamentals	48
4.2	Isogeometric Analysis in Detail	50
4.2.1	B-splines and NURBS as Basis Functions	50
4.2.2	Isogeometric Mesh and Relationship to Finite Element Methods	51
4.2.3	Geometry Mapping – the Relation to CAGD	54
4.2.4	Shared Concepts between the Components	56
4.3	Convergence Analysis	57
4.4	Isogeometric Element Concept	59
4.4.1	Isogeometric Reference Element	59
4.4.2	Bézier Extraction	61
4.5	Uniform Refinement	62
4.6	Implementation Issues	63
4.6.1	Data Representation	64
4.6.2	Element Structure and Enumeration	64
4.6.3	Matrix Assembly	66
4.6.4	Boundary Conditions	68
4.6.5	Visualization	69
4.7	Simulation Examples	70
4.7.1	Heat Conduction on a Half-Disk	70
4.7.2	Heat Conduction on an L-shape	71
4.7.3	Plate with a Hole	72
4.7.4	Turbine Blade	74
4.7.5	Wheel Disk	75
4.8	Conclusion and Applications	77
5	Local Refinement for Isogeometric Analysis	79
5.1	Introduction to Adaptive Simulation	80
5.1.1	Aspects of Refinement in Isogeometric Analysis	80
5.1.2	Isogeometric Analysis Refinement Techniques	81
5.2	Hierarchical B-Splines	84
5.2.1	Basic Definitions	84
5.2.2	Properties of Hierarchical B-Splines	87
5.3	Adaptive Hierarchical Isogeometric Analysis	88
5.3.1	Hierarchical Structures	88
5.3.2	Hierarchical Refinement	93
5.3.3	Hierarchical Reference Element	97
5.3.4	Refinement Criterion and A Posteriori Error Estimation	99

5.4	Implementation Issues	100
5.4.1	Data structures	101
5.4.2	Hierarchical Refinement	101
5.4.3	Matrix Assembly	103
5.4.4	Treatment of Boundary Conditions	104
5.4.5	Visualization	105
5.5	Numerical Simulation Cases	105
5.5.1	Advection-Diffusion	105
5.5.2	Heat Conduction of a Half-Disk	107
5.5.3	Plate with Hole	108
5.5.4	Circular Plate	109
5.5.5	Heat Conduction on an L-shape	110
6	Conclusions	115
A	Software	117
B	Geometric Data	119
	Bibliography	121
