

Part 1 General Pathology

1 Basic Principles	3
Health and Illness	3
Fundamental Epidemiological Concepts	3
Causes of Illness	4
General Reaction Types of Cells and Tissues	4
Disease Progression	9
2 Types of Diseases	11
Genetically Determined Diseases	11
Disrupted Prenatal Development	16
Infectious Diseases	19
Disturbed Immune Reactions	26
Arteriosclerosis	31
Tumors	33
3 Cardinal Symptoms	43
Changed Skin Color	43
Bleeding Tendency	46
Accumulation of Fluid	47
Dyspnea	49
Nausea and Vomiting	50
Pain	50
Fever	52
Enlarged Lymph Nodes	53
Shock	54
Altered States of Consciousness	55
Syncope	56
Vertigo	57
4 Diagnostic Procedures	58
Medical History	58
Physical Examination	58
Laboratory Studies	59
Imaging	59
Functional Studies	63
Endoscopic Procedures	64
5 Principles of Therapy	66
Overview	66
Oncological Therapy	66
Organ Transplantation	69
Medications Relevant to Physical Therapists	72

Study Questions on General Pathology	79
---	----

Part 2 Internal Medicine

6 Cardiology	83
Physiological Basis	83
Cardinal Cardiological Symptoms	87
Cardiological Diagnosis	90
Therapeutic Principles	96
Ischemic Heart Diseases	98
Cardiac Arrhythmias	104
Diseases of the Endocardium	110
Myocardial Diseases	113
Pericarditis	115
Congenital Heart Disease in Adults	115
Circulatory Diseases	117
Functional Heart Disease	120
7 Vascular Medicine	121
Cardinal Symptoms in Vascular Medicine	121
Vascular Medicine Diagnosis	121
Diseases of the Arteries	123
Diseases of the Veins	129
Lymphedema	136
8 Pulmonology	137
Physiological Principles	137
Classification of Pulmonary Diseases	139
Cardinal Pulmonary Symptoms	140
Complications of Pulmonary Diseases	140
Pulmonological Diagnosis	144
Acute Bronchitis	148
Chronic Obstructive Pulmonary Diseases	148
Bronchial Asthma	153
Pneumonia	155
Bronchial Carcinoma	157
Interstitial Pulmonary Diseases and Pulmonary Fibrosis	160
Systemic Diseases with Principal Manifestations in the Lungs	161
Acute Pulmonary Failure	163
Pulmonary Embolism	163
Sleep Related Respiratory Disorders	165
Diseases of the Pleura	166

9 Gastroenterology	169	12 Hematology	242
Anatomical and Physiological Principles . .	169	Physiological Principles	242
Cardinal Gastroenterological Symptoms . .	172	Cardinal Hematological Symptoms	244
Gastroenterological Diagnosis	175	Hematological Diagnosis	245
Diseases of the Esophagus	177	Anemia	246
Diseases of the Stomach and Duodenum . .	179	Leukemia	247
Diseases of the Small and		Malignant Lymphoma	250
Large Intestines	182	Disorders of Hemostasis and Clotting . . .	252
Diseases with Various Localizations	189		
Diseases of the Liver	192	13 Rheumatology	256
Diseases of the Gallbladder and		Rheumatoid Arthritis	256
Bile Ducts	197	Spondylarthropathies	259
Diseases of the Pancreas	198	Collagenosis	261
		Vasculitis	265
10 Nephrology	202	14 Infectiology	268
Anatomical and Physiological Principles . .	202	Diseases That Do Not Involve	
Cardinal Nephrological Symptoms	204	the Respiratory Tract Alone	268
Nephrological Diagnosis	205	Infectious Diarrheal Diseases	271
Replacement of Kidney Function	207	Staphylococcal and Streptococcal	
Acute Renal Failure	209	Diseases	273
Chronic Kidney Disease	209	Herpes Virus Diseases	275
Urinary Tract Infections	211	Tetanus (Lockjaw)	278
Kidney Stones	212	Tick-Borne Diseases	279
Kidney Cell Cancer	213	Sexually Transmitted Diseases (STD)	281
		Protozoan Diseases	284
11 Metabolic Diseases and Endocrinology	214	Study Questions on Internal Medicine . . .	287
Disorders of Carbohydrate Metabolism . .	214	Glossary of Terminology	290
Disorders of Lipid Metabolism	220	Further Reading	307
Disorders of Purine Metabolism	222	Figure Sources	308
Overweight, Obesity,		Index	309
and Metabolic Syndrome	222		
Disorders of Bone Metabolism	224		
Diseases of the Pituitary Gland	229		
Thyroid Diseases	234		
Diseases of the Adrenal Cortex	238
