

Field-Ion Microscopy in Materials Science

1	Introduction	3
2	Principles of FIM technique	5
2.1	Specimen Preparation	5
2.2	Operation of the Field-Ion Microscope	7
2.3	Image Formation	7
2.4	Some Aspects of Field Evaporation	12
2.5	Mechanical Stresses Exerted by the Applied Field	19
2.6	Image Contrast of Alloys	21
2.6.1	Disordered Solid Solutions	21
2.6.2	Long-Range Ordered Alloys	23
2.6.3	Decomposed Alloys	25
2.6.4	Vacancies and Interstitial Atoms	27
2.7	Magnification and Resolution of the FIM	30
2.7.1	Magnification	30
2.7.2	Resolution	33
3	Single-Atom Mass Spectroscopy in Connection with FIM	34
3.1	The Atom-Probe FIM	34
3.2	Analysis of Atom-Probe Data	35
3.3	Problems and Limitations of Atom-Probe-Analyses	42
3.4	The High-Resolution Energy-Focusing Atom Probe	44
3.5	The Field-Desorption Microscope and the Imaging Atom Probe	45

* Habilitationsschrift, Univ. Göttingen

4	Applications and Results	48
4.1	Overview of Defect Analyses by Means of FIM and Atom Probe	48
4.2	Point Defects	49
4.2.1	Some General Remarks	49
4.2.2	Studies of Thermal Vacancies	49
4.2.3	Interstitial Impurities	50
4.2.4	Short-Range Order and Clustering	51
4.3	Radiation Induced Defects	52
4.3.1	Some General Remarks	52
4.3.2	Defect Structure Generated by Ion Impact	54
4.3.3	Radiation Damage Created by Neutrons	56
4.3.4	Analyses of Recovery after Irradiation	57
4.3.5	Composition Profiles of Implanted Species	61
4.4	Disorder-Order Transformation	61
4.5	Interfaces	69
4.5.1	Structure and Topography of Grain Boundaries	69
4.5.2	Interphase Interfaces	77
4.5.3	Interface Segregation	77
4.6	Precipitation	80
4.6.1	Some General Remarks	80
4.6.2	Phase Separation by Nucleation and Growth	82
4.6.3	Spinodal Decomposition	93
4.7	Semiconductors	100
4.8	Metallic Glasses	102
5	Conclusions and Outlook	108
