

Contents

A. Introduction	1
I. Enterogastrone Concept	1
1. Endogenous	1
2. Exogenous	3
II. Incretin Concept	4
1. Endogenous	4
2. The Insulinotropic Effect of the Gastrointestinal Hormones	5
a) Secretin	6
b) Gastrin	7
c) Cholecystokinin-pancreozymin (CCK-PZ)	7
III. Evidence for the Existence of GIP	8
1. Physiological Studies	8
2. Tissue Extraction Techniques	10
B. Chemistry	12
I. Isolation and Purification	12
1. Isolation	12
2. Purification Criteria	13
a) Polyacrylamide Gel Electrophoresis	13
b) Thin Layer Chromatography	14
c) High Pressure Liquid Chromatography	14
d) Capillary Isotachopheresis	14
II. Amino Acid Sequence	15
1. Cyanogen Bromide Cleavage	15
2. The Tryptic Peptides	16
III. Correction to Sequence	17
IV. Synthesis	18
C. Physiological Actions of Exogenous GIP	20
I. Gastrointestinal Effects	20
1. Gastric Inhibitory Activity	20
a) Inhibition of Acid Secretion	20
b) Inhibition of Gastrin Release	22
2. Effect on Pepsin Secretion	23
3. Intestinal Secretion	23
4. Salivary Secretion	24
5. Mesenteric Blood Flow	24

II. Metabolic Effects	25
1. Insulin Release	25
2. Glucagon Release	30
3. Other Metabolic Effects	30
a) Glucose Uptake	30
b) Effects on Adipocytes	30
c) Proinsulin Biosynthesis	32
D. Radioimmunoassay	34
I. Development	34
1. Production of Antisera	34
2. Characterization of Antisera	34
3. Preparation of ¹²⁵ I-GIP	35
4. Assay Procedure	36
II. Immunoreactive GIP (IR-GIP)	37
1. Release of IR-GIP	37
a) Response to a Meal	37
b) Response to Carbohydrate Ingestion	37
α) Stimulation	37
β) Mechanism of Release of IR-GIP by Carbohydrate	41
c) Response to Triglyceride	43
d) Response to Amino Acids	44
III. Inhibition of IR-GIP Release	44
1. Insulin and Glucose	44
2. Glucagon	46
3. Other Mechanisms	47
a) C-Peptide	47
b) Atropine	47
c) Somatostatin	48
IV. Nature of IR-GIP	48
1. Circulating Forms	48
2. Tissue Forms	50
E. Localization	51
I. Cellular Localization	51
II. Release Studies	53
F. Pathophysiology	54
I. Diabetes Mellitus	54
1. Non-insulin-Dependent Diabetes	54
2. Insulin-Dependent Diabetes	57
II. Pancreatitis	59

Contents	XI
III. Other Gastrointestinal Disorders	61
1. Coeliac Disease	61
2. Duodenal Ulcer.	62
3. Vagotomy and Pyloroplasty	64
IV. Obesity	64
V. Uraemia	67
VI. Other Clinical Situations	68
1. Pregnancy	68
2. Insulinoma	69
 G. Summary and Conclusions	 70
I. Physiological Role	70
1. Gastrointestinal Actions	70
2. Metabolic Actions	71
II. Pathophysiological Role.	72
